The family that felons together, stays together???? Looks like KE4TEW is
the head of a large group of Florida Convicts.

No, it's quite right. It's what you want for amateur radio, Len. You've been saying it for years now, and it goes far beyond code test elimination.

> You are still in the delusion of living in PAST standards
> and practices of amateur radio.

Be specific. What are YOUR standards and practices? What would YOUR standards and practices for the amateur radio service be?

> Anything against your fraternal-
> order idea of amateur radio is labeled by you as "wrong" or some
> evil personified by Citizens Band Radio Service.

Not at all. And the question is about YOUR proposed standards and practices. It's clear you will not stand for anyone to say anything that doesn't admire the way cb has evolved.

> The FCC is not required to sanctify or regulate a fraternal order
> as ordained by the ARRL. That is your fantasy and delusion.

So what do you suggest?

> Citizens Band Radio Service has been in existance for longer
> than 45 years and several private land mobile radio services (now
> collected under PLMRS) have been in existance longer than that.
> Times have changed.

What, exactly, does that mean? 27 MHz CB started out on 23 channels and got 17 more back in the '70s. Started out with AM and got SSB - both modes are still in use. Started out with licenses but dropped them in the 70s.

In fact, cb hasn't changed much since the '70s, has it?

The amateur radio of today is quite different from the amateur radio of 30 years ago, but the cb of today isn't much different from the cb of 30 years ago. Yet you would have the amateur radio service emulate the cb radio service. Why?

> ARRL can no longer assume guardianship
> over US amateur radio service as it did before Internet and improved
> citizen ability to communicate directly with the FCC.

We've alwyas had direct access to FCC. Didn't you know about typewriters and the post office?

> The OTHER
> U.S. radio services have changed and adapted to modern times.

You mean like cb has adapted?

Let's see, we hams have a wider variety of modes, equipment, and operating activities than ever before.
>
> Why do you NEED all thsoe "classes" in an a voluntary, avocational
> recreational radio activity?

License classes allow beginners to get started with an easy-to-get license and work their way up to full privileges over time. Of course if someone wants to get a full-privileges license "right out of the box", they can choose to do that, too. Right now, FCC thinks 3 classes is the right number.

Why does all this bother you? You don't have an amateur license and you don't seem to want one. In fact, you want to prevent people under the age of 14 from getting amateur licenses.

> Is it just to give yourself an elitist "title
> of nobility" to "sign" behind your name (or in lieu of it)?

It's an identifier. There may be other folks out there with a name similar to mine, but nobody else has my amateur radio callsign.

I *earned* the callsign N2EY by passing the required tests. I've held it and used it for 26 years and I'm proud of it. Is that wrong, Len? You seem to think

it's wrong for me to be proud of my accomplisments in amateur radio.

You've never had any amateur radio callsign and never operated any amateur radio station (as the control operator, anyway) yet you preach to us endlessly about amateur radio.

> Do you
> NEED the artificiality of class-distinction to "prove" yourself to the
> world...or to prove you are "better" than others...so that you can
> feel justified in putting down others?

Not at all.

Does my use of my callsign in postings cause you to feel "put down", Len? Poor baby!!!!!!

> It would seem that you DO have such a NEED.

Just your "delusion and fantasy", Len. Perhaps you're jealous.

All you're really saying is that you favor just one class of amateur license. Why not just come right out and say that? You're not being paid by the word.

> I find all of radio and electronics in general to be a fascinating area
> of technology, so much so that I became a hobbyist in that a long
> time ago and made it my life's work...even though experienced and
> with an aptitude for a totally different kind of work.

And you remind us that you're a "PROFESSIONAL IN RADIO!!!!!!!!!!!" in almost every posting here. Then you get mad because we don't bow down to you.

> But, you and
> other "titled," self-important radio amateurs want to put that down,
> stoutly maintaining an absolute rigidity to the artificiality of rank,
> status, privilege AS IF amateur radio were the SAME as a guild or
> union.

Is there something wrong with guilds or unions - particularly ones that anyone can join?

> Everyone (according to yourself) MUST follow the "rules,"
> not the regulations, but the "rules" as laid down by one membership
> organization which still is just a minority "representative" political
> action entity.

What *are* you talking about, Len? Give us an example of these "rules".

And what would YOUR "rules" be? Should we hams follow the example set by cb? You'd like that....
>
> Do not deny that ARRL is a political-interest group.

Where have I done that? It's a good thing ARRL is a political-interest group. Do you think anyone else could lead the fight against BPL? I sent them a check to do just that.

Oh wait - no strong national organization ever emerged for cb....

> Their federal
> tax returns are evidence that they retain a lobbying service in DC
> as well as a law firm.

So? Those are good things. (where's that checkbook?)

> They are NOT a government entity, just a
> large fraternal order that survives on publication and product
> resale and advertising profits.

And membership dues. Only $39/yr.

> ARRL deludes you and others into
> thinking they are always "representative" of radio amateurs...but
> over the years of successful brainwashing through self-promotion,
> they remain a minority political entity on "representation."
>
That's just your delusion and fantasy, Len. All anyone needs to do is to find out what ARRL policies are, and decide whether they agree or not. I don't agree with all ARRL policies, and I let the directors know that.

> You will not accept such a minority status yet it is obvious reality.

You're a minority of one, Len.

> The FCC has recognized this some time ago but you still support
> defend and sometimes "fight" for the ARRL on matters and blame
> the FCC for your perceived "evils" while turning hypocritical and
> extoling the ARRL as "doing the right thing" when decisions align
> themselves with your ARRL-influenced personal opinions.

You're just ARRL bashing again. Typical.
>
> Case in point: As of the close of 28 October 2003, the FCC ECFS
> had a total of 3,877 comments on 14 petitions for regulation
> changes on retention (7) or elimination (7) of the morse code test
> for U.S. amateur radio. Comments were from all over the nation,
> individuals to groups, licensed and unlicensed in amateur radio.

So? FCC has *always* accepted comments from all interested parties. Back in the '60s, when their were far fewer hams and commenting to FCC meant making an original and a pile of paper copies, FCC got over 6000 comments to their restructuring proposals.

> There is far more access and FREEDOM for all citizens to make
> our grievances known to our government...directly if we desire,
> not having to use a "middleman" group to do our collective
> communications...a "middleman" that pretends to be "representative
> for all" yet is not, by all evidence, representative to any but a small
> coterie within that organization.

The freedom has always been there, Len. We had typewriters and postal service back then. Anyone could comment. ARRL encouraged it then and they encourage it

now. So do I. You don't.
>
> You desire to have such commentary CLOSED to any but the elite
> already-licensed.

That's not correct. You are mistaken. In error. Flat out wrong.

I'm for anyone interested being able to comment.

I challenge you to show where I have been against *ANYONE* commenting to FCC.
Even you.

Of course, if someone expresses an opinion or comment, they have to be able to
"take the heat" of having others disagree with, and debate, their opinions and
commentary. You can't tolerate being disagreed with.

> Such is against the very basic First Amendement
> to the United States Constitution.

I'm for anyone interested being able to comment.

I challenge you to show where I have been against *ANYONE* commenting to FCC.
Even you.

Didn't you write:

"Shut the hell up, you little USMC feldwebel."

right here in rrap a day or so ago, Len? Is that in the spirit of the very
basic First Amendment to the United States Constitution?

If that's how "PROFESSIONALS IN RADIO!!!!" behave, I'll stick with amateurs,
thank you very much.

> The FCC is not obligated in any
> way to sanctify its regulations in the maintenance of an essentially
> private fraternal order. Yet you insist that this "fraternal order" MUST
> be maintained. Others insist more fervently, ready to fight at
> all costs. Such a "must" is delusional, fantasyland imagining.

So are you telling me to "shut the hell up"?
>
> Amateur radio is a voluntary, avocational, recreational activity done
> for no pecuniary reason. A hobby. Fun.

How would you know, Len? You aren't a ham and never have been.

> But some want to rule,
> to regulate the "fun" solely for their self-interests.

That would be you, Len.

> Not technical
> regulations but the activity itself and this strange absolute NEED to
> be just like a professional service group with rigid adherence to
> activity rules, jargon, even paper forms ("official" radiogram blanks).

> This strange NEED for rigid adherence extends to absolute honoring
> of tradition AND an intolerance to anything new that threatens the
> perceived glory and honor of any tradition or its history. All who
> have any interest whatsoever MUST be licensed to the imaginary
> "dedication and committment to the ARS community."

So what are YOUR standards and practices for the amateur radio service, Len?
How would you set things up?

You tell us endlessly what you don't like, but except for a constant insistence
on dropping the one remaining Morse code test and bashing ARRL and traditions
you don't tell us how *you* would order things. Oh wait, you wanted an age
requirement of 14 years for any amateur license. CB used to have an age
requirement, back when they had licenses....
>
> All who refuse to Believe in such a fantasy are heretics, lesser

How many children have you raised?

> Over
> morse code proficiency that has been dropped or never considered
> by every other radio service? That's fantasy, delusional thinking,
> suitable only for fraternal orders looking for status quo stability.

No, it was an observation of the value of standards. Maybe you don;t like those
standards - fine. Tell us, specifically, what *your* standards would be.

How many classes of license? Requirements for same? Callsigns? Operating
procedures? Subbands by mode and license class? Power limits? Authorized modes?

Get specific. This isn't a Zen experience where we describe things by saying
what they aren't.
>
> My father and father-in-law would no doubt have great fun at such
> "important family values" to pass on had they been alive today.

Were they radio amateurs? Did they even know what amateur radio is?

Are you going to tell us how they could cuss us out in foreign languages for
daring to disagree with them?

If my ancestors could outcuss your ancestors, would it make them right?

Would your ancestors be proud of you telling a complete stranger to:

"Shut the hell up, you little USMC feldwebel." ???

Those are *your* words, Len. No smiley, either.

Hey - I've got an idea! Let's start a thread that's a collection of quotes from "Len The Zen", where he shows us how "PROFESSIONALS IN RADIO" behave in "civil debate"! We can start out with that "USMC feldwebel" one, and add more as they are found.

> They were both born a year before the first radio signals crossed
> the Atlantic and three years before the Wright brothers successfully
> flew a heavier-than-air vehicle...and both saw the first humans set
> foot on the moon by live television from a quarter million miles away.

How does that make them somehow qualified to judge amateur radio policy today?

btw, it's been 31 years since any humans got to the moon. Commercial supersonic air travel has recently ended. If someone still as a working TV from 1969, they can still use it to watch today's programs...

And cb is still a mess.

> Change happened in their lifetimes. Great, profound changes.
> Change will continue to happen in many things and in many lives.
> We can all adapt and meld with the future, become part of it, or
> remain in the past in a fantasyland of old things, old ideas, old
> standards, old skills that no longer apply to the majority living in
> reality.

Give us some specifics besides dropping the Morse code test, Len.
>
> I am for the now, the future, reality and freedom.

Yeah, me too, Mom's apple pie, truth, justice and the American way...

> I will not live in
> your delusional fantasyland.

You often sound like you just visited the Magic Kingdom, Len....;-)

>Neither will millions of others.

Who are these "millions"? Do you claim to represent them? Talk about delusions and fantasies....

All that over a 5 wpm code test for a license in a radio service you have no interest in joining. Fascinating.

And what the heck is a "feldwebel"?

> Times change. Years ago, there were great open spaces throughout America
>just waiting for new immigrates to settle.

There are still great open spaces. The indigenous peoples who lived there for thousands of years might not agree that they were "just waiting to be settled".

And my grandparents didn't go there anyway. The wound up in New York City, Sea Isle City, NJ, and Philadelphia.

>Those shopkeepers, craftsmen,
>farmers, laborers, and so on, clearly benefited a new nation.

Some back then weren't happy to see lots of immigrants, competing for jobs and bringing their strange culture with them....

>The benefits
>today are subtle and the problems (job shortages and so on) more pronounced.
>Because of that, we have to cut back on immigration at some point.

If my grandparents had waited a few years, they would have been up against the quotas of the 1920s.

>We can't
>have the entire world's population, or even a significant portion of it,
>living here. I think we've reached that point - the point where we cut back
>on immigration except for the very most extreme cases. And when I say
>extreme cases, I mean extreme cases.

The hard question is...who gets to decide?

And one of the problems we face is that some of the "immigrants" are actually here "temporarily" on visas.

>Economic considerations would not
>qualify. Those facing persecution or death in their home country would only
>be allowed to stay only as long as those threats exist, after which they

"Kim W5TIT" wrote:
> It behooves all of us to be just as indignant about
> racism in any venue, regardless of ethnicity of the
> racist.

But whites are often the sole receipient of that indignation, Kim. Show me a message anywhere in any of these newsgroups at any time where you've expressed any indignation whatsoever about the racism of any other racial group. If you're typical, I seriously doubt you can do so. Instead, you attempt to explain away the racism of others like you've done below.

> That having been said, I can understand some of the
> seclusion each race enjoys from others, IF the purpose
> is cultural. What is specific to a black mayors
> conference are those things specifically related to black
> issues in the community(ies) they represent. (snip)

I thought a mayor is elected to represent the whole community, not solely the "black issues in the community(ies) they represent." What about the whites issues in the communities they represent? Why aren't those black mayors getting together to discuss those? Since those black mayors won't, who does address those issues? Absolutely nobody is the only answer. If a white mayor, or any other politician (black or white, police chief to president), expresses even a hint of concern for white issues, the word "racist" is immediately thrown around. In the end, a concern for whites is just about an ultimate sin in this government. And it is going to stay that way until whites start demanding some representation for their issues in this government.

> I am certain that if there were issues that needed addressing
> in a "whites only" venue, then you'd see a white mayors
> conference and, honestly, I am not so sure there isn't one.

Be serious, Kim. First, I suspect a conference like that would be considered illegal by the Justice Department - minorities can but whites cannot. Second, if such a conference were held, groups throughout the country would be out outraged, demonstrations would be held, lawsuits would be filed, and people like you would be running around screaming your indignation again.

> What we may find generally attractive in a representative for
> the United States in a Miss America, is totally different from
> what the Black/Negro/Colored (depending on the part of
> society and geographical/historical perspective you come from)
> find in a representative specific to Black America.

And that justifies the intentional and specific exclusion of other races in those pageants? Why would what you say not be true for whites, yet such an event held by whites which specificially excludes other races is illegal.

And I'll add to JJ's examples. What about black colleges which exclude other races? What about black owned businesses with not a single white employee in the entire building (many in my town alone)? What about the "Negro College Fund" which offers benefits only to blacks. What about "Black Entertainment Television?" I could list more. The point is that it would all be illegal (discrimination) if done by whites.

> I don't see that a all male organization is necessarily
> discriminatory, either. (snip)

If the goals of that male-only organization were to promote the political and/or social advancement of males, would you still hold that same opinion?

> What about a sports organization that won't allow women?

Based on physical strength, not racial, social, or ethnic, considerations, Kim. There is a huge difference.

Nonsense, Kim. The reason most people aren't willing to do those jobs is because the wages are so low. Offer decent wages and people will gladly do those jobs. There are non-immigrant workers throughout this country busting their butts in construction jobs, laborer jobs, crappy jobs, and dangerious jobs. They do so because the wages are decent. My god, there are even people willing to walk into a nuclear reactor if the pay is good enough. Offer decent wages for almost ANY job and I'm fully convinced there will be plenty of non-immigrant workers willing to do those jobs. I see nothing to even suggest otherwise.

Why should he work? He's living at home with mommy where everything is free and he's spoiled rotten. When he is old enough, throw his butt out and watch how fast his work ethic changes. In the meantime, sharply reduce the money you give him (no car, no fancy school cloths, no expensive shoes, no music CD's, no stereo, and so on) and tell him to get a job if he wants those extras. After he throws a temper tantrum for a few months, wears out of the stuff he has now, and realises you're serious, a job will look much more appealing to him. He will have to do all this eventually anyway, so now is a good time to start properly preparing him for his future. Later, once he has to start paying for them, he'll miss the free food you gave him and the free shelter you provided.

> Now, I meet adults with the same attitude. I am very

> Very thankful indeed, for no one else would do them.

Like those other adults you mention, there are many jobs I will not do today, Kim. I can't afford to do those low paying jobs if I want to feed my family, live in a decent home, and make the car payments. And I'm certainly not willing to live twenty to a hotel room or apartment like you see so many

poor illegal immigrants doing today. And, lets face it, I just can't physically do some of those jobs anymore. But none of that suggests for a moment that I'm not willing to work. Likewise, none of that suggests there are no younger non-immigrants willing to do those jobs if the wages were decent.

If I could still physically do it, I'd be thrilled to do so, Jim. My grandmother owned a huge farm in North Carolina and I truly enjoyed going there every summer during my teenage years to work. I worked side-by-side with the hired laborers and did every single job they did. However, because of the low wages for most of those jobs today, I certainly wouldn't do some those jobs today (even if I could physically do so). However, a few farmers in the area still pay well and they have no problems finding labor. If I could do it, I wouldn't mind doing one of those jobs one summer just for the fun of it.

I believe you have it turned around again, Leonard. I've been a
licensed radio amateur for decades and have been a life member of the
ARRL for over 25 years. You are the non-radio amateur and non-ARRL
member sitting on whichever end you sit on and blowing hot air on topics
in which you have no part.

Perhaps you believe it to be an eastern headquartered organization's attempt to discredit you personally. ARRL isn't a broadcast news organization and you have no idea of what contributions radio amateurs have made in the efforts to douse California's fires. Your sniping from the sidelines makes you look silly.

Here lies the rub, Dwight! Although I disagree with a lot of your views on race, you are spot on on this thread sub-subject.

The reason that this is "undesirable" work is simply because the producers are allowed to get away with paying such low wages. If they don't even pay minimum, how is a citizen even supposed to legally hold the job?

Heck, even Wal Mart is doing it now. They've been caught using illegal immigrant labor on contract for cleaning. (I can just hear Paul Harvey "You couldn't have a better neighbor, I suppose *they* can't afford to pay decent wages?

People picked crops as citizens long before it became "undesireable" work that could only be filled by illegal immigrants.

The question that comes to mind is "why won't they do those jobs?"
Obviously ever worker with any sense is going to go for the "best" job
they can find, but when someone is unemployed for a considerable
length of time....

And there are some jobs which are hazardous enough to make one think
twice.

If you want a snapshot of how bad things can get, there's an excellent
book and PBS documentary on the building of Hoover Dam. I hope and
pray that I'm never, ever as desperate as some of those workers had to
be in order to take some of those jobs. Like drilling holes for
explosives in a rock face several hundred feet up, sitting on a
boatswain's chair with no safety harness, no net, not even a hard hat.
And if ya fell, they'd leave your dead body lying there until change
of shift (unless it was in the way, then they'd move it). Mustn't slow
down the work.

Or working in a diversion tunnel full of carbon monoxide exhaust fumes
because the company insisted on using internal combustion engines in
the tunnels, which lacked adequate ventilation systems.

The project was finished ahead of schedule and under budget. Project
manager got a bonus of something like $300,000, workers got a pink
slip. 65 workers died to build it. How many years' salary for an
average worker was $300,000 in those Depression times?

Many have wrestled with that for years. Some argue the wealthy don't need the benefits. Others argue if everyone pays into the system, everyone should collect later in life. In the end, if the goal is to provide a solid parachute, the current system is not that bad.

> Another factor is that as our life expectancies increase,
> more and more people outlive their SS contributions.
> (snip)

Another serious problem. It wouldn't have been so bad had the government invested that money over the years so it could bring in a healthy return, but they didn't. So what do we do now? First of all, money is available without raising taxes. The government collects billions of dollars in taxes each year. The question is where that money is spent. Do we buy new military hardware and finance art shows, or do we provide for the elderly? If we want to do all of that, we have to raise taxes. If we only want to do some of it, and cut some, we don't need to raise taxes. Some say cut the benefits for the elderly and keep the other stuff. I think we should cut some of the other stuff and keep the benefits for the elderly.

> You might want to look up where the military budget
> actually goes. A big percentage of it is spent on pay
> and benefits to military personnel, retirees and
> dependents.

That is less so today. Even though the military budget has continued to climb, the number of active duty personnel has decreased(less than half what is was twenty-five years ago). Likewise, benefits for dependents have also decreased. For example, dependents used to receive free medical care. Today, they pay fees for any medical treatment, with that treatment additionally subsidized by a medical plan paid for by the active duty spouse.

There is also a built-in inefficency in the military system today. For whatever reason, many of the jobs once done by active duty personnel (cooks, clerks, admin, maintenance, recreation, and medical) are now done by civilian employees, many earning much higher wages, benefits, and retirement. Likewise, many technical jobs are now handled by contract companies, whose employees also often earn much higher wages, benefits, and

retirement. As a result, it is now much more expensive to staff those jobs.

Some of the less skill oriented civilian jobs were once open to dependents. Sadly, even this is rarely the case anymore. In many places overseas, for example, dependents can no longer find work simply because most of the jobs (especially the ones that pay fairly well) are reserved for civilians (often local nationals). As a result, dependents are usually left with the part-time jobs at the BX/PX, snack bars, fast food joints, or they can bag groceries at the commissary.

> And people vote for those politicians because they're
> "pro-business".

People vote for those "pro-business" candidates because they're mislead about what "pro-business" really means. If any candidate actually told the truth and said he supports immigration because that would drive down wages for everybody and employers like low wages, that candidate probably wouldn't get more than a handful of votes (and most of those from business owners). Instead, candidates talk about supporting business to help stimulate the economy and create jobs. What is never said is that the only "economy" being stimulated is the profits of big business and the only jobs being created are low paying ones. Of course, since both political parties support big business, voters don't have an alternative choice anyway.

> You might want to check into what the average person's
> standard of living is like in many of those countries -
> particularly when it comes to how much a house or car
> costs. Dave, K8MN has lived in many foreign countries...

Homes are expensive because there are a lot of people living in a relatively small area. This happens anytime there are large numbers of people living in fairly crowded conditions (New York, for example). Apartment prices are not any higher. We pay more for our apartment now than we did in Germany (and this one is smaller). As for the cost of automobiles, I have no idea what Dave is talking about. Where I lived, car prices were nearly the same as here. If anything, there is a greater selection of lower priced models (our car prices are getting pretty darn high).

> It's not impossible - the question is, what do you want to
> give up? Or should I Say - what are *we* willing to give up?

I've already answer that - "immigration" and "decent (not astronomical) profits for business."

> For example, tonight on NBC there is a popular half hour
> TV comedy whose 6 main characters are paid 1 million
> dollars each - per episode! Are we willing to give up the
> free market that makes such salaries possible?

If it takes that to insure decent wages for all Americans, I'm certainly willing. But I don't think it is going to take that. Instead, we can cut immigration and take steps to prevent factories from moving overseas (one

way might be to require American companies that move factories overseas to pay import tariffs and duties just like any other foreign business). We could also put caps on corporate profits without much damage to the overall free market system (Bill Gates, as an extreme example, can survive on a little less money). Increasing the minimum wage to more realistic levels might help. And, if companies don't get the hint and try to pass that on to consumers while keeping profits extraordinarily high instead, we can start regulating major consumer goods (with the idea in the beginning of driving prices down). All this has been done, to some degree, in Europe and Asia with no ill effects. By the way, taxes in Europe have nothing to do with this discussion. If we continue to insist on no national health care system and few government aid programs like those seen in Europe, taxes won't have to be raised.

> Are we willing to give up low prices on imported goods
> and pay a lot more for American made things? Drive a
> smaller car, live in a smaller house, walk more, fly less,
> own fewer things, make things last and last because we
> can't afford new ones?

That is a gross exaggeration and you know it, Dave. Nothing that drastic will be required. I've already outlined some of the far less intrusive steps we can take in the previous paragraph.

You don't want him working in a Wal Mart, do you ;-)

One thing these low paying crap jobs teach to teenagers is that they should
go to college and graduate so that they can get good jobs that pay well.
Before I graduated college (BSEE) I was worthless on the job market.
Then when graduation was only months away, my value suddenly went
up. And except for the past year or so (I'm voting for the Democrat
candidate,
whoever that might be), my value has been pretty good.

Just be sure that your son majors in something employers want to hire
(not much market for "Ancient Greek Physiology") that makes the trip
to college worthwhile.

The process by which individuals apply to legally enter the USA on
a resident basis is well defined already. The complaint of many, including
myself, is that too may people (good, bad or indiffernet) byass the
process and enter "illegally" while others do the right thing. I have a
friend who went through almost 2 years of approvals before he was
allowed to enter the USA as a resident alien...and he was born and
raised in the UK, is college educated, no police record, etc.

Back in whatever the year was that your (N2EY) granparents came to the
US, odds are they did so legally following the
legal process at the time. If so, then of course they should have
been allowed to come here.

Why does WalMart have an obligation to "police" the pay scale of
a contractor's employees. As a homeowner, I "hire" contractors now
and then to do various jobs...it ain't my responsibility to know
how much Company X contractor pays its employees

> People picked crops as citizens long before it became "undesireable"

Heck, some folks PAY for the privilege of "pick your own" (enter appropriate farm product name).

>>
>I'd say the provisions of Sec 15.5 are quite restricting, though....

It depends on the particulars of the application, and one's good luck,
I guess, since 15.5's primary effect is to make it uncertain whether
or not a Part 15 device will be (and will continue to be) usable. Given
the bizzilions of Part 15 transceivers sold to people who seem happy with
their purchase, however, it is clear that many have suffered no constraints
from 15.5 which bother them. For some applications the probability of
being constrained by 15.5 seems to be pretty small in practice.

Note too that the ARS is also (though differently) constrained with
respect to applications, particularly by 97.113 and 97.115. Whether
the ARS restrictions or the Part 15 restrictions are more onerous
depend a lot on what use you want to make of the devices you build.

I get it....the federal government takes from the states, the states take from its workers. The Federal government redistributes the monies received from the state and the people back to the states, that now redistributes it to the people.

Sounds like the failed Socialist system....just with one more step.

Sorry.....that ain't what is 'supposed' to happen in this country. Don't get me started on that one.

In the beginning.....there was Philadelphia.

It was decided to have a looooooose confederation of states brought together under a weak Federal government. The purpose of which was to provide such things as; common roads, common monies, common rules and regulations pertaining to INTERSTATE commerce. And if needed to provide for the defense of one, or all of the states.

What the hell happened?

If the government would stop the foreign aid to those countries where
that aid mainly supports little 2-bit dictators we would have enough
money to take care of the elderly.

And there-in lies your major problem, Stebe, you don't think.

> For an offense to have occured, it onl;y requires that it be
> perceived as such.

I perceive you to be an unbalanced person. See my numerous posting
asking you to seek help. Again, please seek help.

And I perceive an offense to have occured. You have threatened me in
full capitalization.

Additionally, you have misspelled the word, "onl;y," which according
to your own rules of netiquette, you are in a rage.

You as a trained and experienced US Marine Gunnery Sargeant, I
perceive those combinations of events to have placed me in a position
of harm.

I fear you, and I pray that you do not own a firearm.

> Personally, I think you were just pushing the limits of how
> offensive you could be and still get away with it.

What do you plan to do about it? I hope you don't kill me.

> It didn't work.

It must have. I am in fear of my life.

> > Thre's no apology to offer, Brain.

Another rageful misspelling. Geezus, is he going to hurt me? kill
me?

> > There should be. Why do you assume yourself to being above making
> > mistakes, such as the one you made above?
>
> As I pointed out, in order for an offense to have occured, the

Oh, damnit!!! Another mispelling. And a threat of doing something
illegal!!!

Are you going to assault me. Kill me? Kill my family???

Stebe, you've crossed the line!

I tell you to back off. Apologize.

Trust me, if you keep this up, the result will be anything
> BUT illegal...And expensive I might add.

Perhaps Extra-illegal? And funerals are so expensive. Thank goodness
I have burial insurance and the government will provide a flag for my
funeral.

> > Now move on to your apology.
>
> None will follow, unless YOU would care to express one for
> uttering language that was perceived as a suggestion that you might
> hold a gun to one's head, Brain.

I never expressed even as a suggestion that I would hold a gun to
one's head, let alone your head.

It is all in Google.

But by your rageful responses (by your own definition), I now fear for
my life.

> And incase the last few hints didn't hit home with you, I suggest
> you discuss with legal representation of your choice what can be
> perceived as a threat.

Noted and done. Hopefully you have done the same. Hopefully your
legal representation didn't recommend you do something "

> > > Someone else in this forum tried that, and I can tell you that he

> >
> > I am not someone else in this forum.
>
> But you MIGHT be someone NEXT, Brain.

You've hurt others? Dear God, what kind of person am I dealing with?

> > Meanwhile, I still read a threat in your response.
>
> A warning. I perceive your references to the holding of a gun to
> my head as a threat. If you meant it any other way you may, in the
> next response to this thread, express a retraction of that statement
> and an apology for the anxiety it caused.

I never said, nor meant, nor insinuated that I would hold a gun to
your head. I refer you to the first reference, where I said I wasn't
holding a gun to your head. I wonder why anxiety was present if for
not some mental problem on your part.

Hopefully, you have no history of counseling that might suggest that
you are an anxious person.

Do you have a history of counseling?

> Otherwise I will assume your intent WAS to cause it, and I can
> proceed accordingly if you insist.

Your assumptions make for skunky gossip, nothing more. I suggest you
refer to real life. There was no intent to cause you anxiousness.

Are you a "naturally" anxious person?

> > Now move on to your apology.
>
> What apology?

The apology that I demand from you for putting me in fear of my life,
from a trained Marine who has stated that he would do something
violent and ILLEGAL (see above).

That apology.

> > > No, Brain...On THIS one I am sure.
> >
> > The fool is always so sure, especially when they're wrong.
>

> And in this case when he refuses to admit that he uttered words
> that were percieved as threatening and offensive.

Yes, those threats that you've been uttering. Those mispelling that indicate that you're in a rage. The training that you've received in the US Marine Corps to kill people from faraway places. Your words about doing something violent and illegal!

Those perceptions that I hold based upon your very own words.

...all of those things that you've uttered that I perceive as life-threatening.

> Which would be you...
>
> > Gunny, you need to move on to your apology.
>
> What apology?

The apology that you are about to render.

I'll give you an out - an out that many a thousand soldier has taken. No Captain's Mast. No Article 15. No prison time. No fine. No nothing.

In your next posting, simply state: "No excuse, Sir," and be done with it.

Nothing else.

Absolutely no shame in it.

Be a good soldier and get on with it.

Brian/N0iMD

1999. FS Hitlers Toothpick

For Sale, toothpick used by Adolph Hitler. It is authentic because
there is a letter (signed by me) saying so. Comes with a photo of
Hitler with his hand near his face (no one can prove he is NOT using thi
s toothpick) as corroboration. I am asking $1500. If you don't like the
price, let's talk.Please email me at twistedhed@webtv.net.

> how much Company X contractor pays its employees

For the same reason they might want a contractors employees tested for drugs. For the same reason you might not want to invest in an organization that has practices you don't like. Wal Mart has accountants, the accountants know - or should know - the hours needed to do a certain function, therefore they should have an idea what it should cost to contract out a service. If a bid comes in below what it should cost, the contract company is either not doing the job it should, is using illegal help, or is so incredibly efficient that the hiring company should have the contracting company do some seminars on how they got so efficient.

You might want to think about your practice of apathy toward subcontractors. One way that they can charge lower prices is to not carry insurance. I recently had tree work done, and we got several quotes. We asked the lowest couple quotes to provide proof of insurance. Guess what? No insurance. So I do want to know a few things about those who I hire. YMMV. For myself I won't try to stand up for something illegal.

> 73 de Jim, N2EY

Jim, et al;

Some interesting and thought provoking suggestions/proposals.

I agree we'll just have to disagree on the code testing, but IF folks are
looking for a tp down revamp of licensing for US hams, Jim (KL7CC)
has certainly stirred the pot.

Maybe a good place to start would be the proposed "Communicator"
entry/beginners exam. Personally I think the applicant needs
some command of Part 97 rules...not all, but at least those that
would lay out the rules for Communicator license. I have always felt
memorizing
band edges makes little sense on a test because they do and have changed

over time. I'd like to know the applicant could at least read a frequency chart and be able to answer questions regarding the privileges for his/her license. That could be "open book" where the frequency chart is provided. Other basic questions probably should require some recallable knowledge (e.g. music is forbidden, etc.)

If you haven't read the KL7CC white paper, here's where you can find it:

http://www.qsl.net/al7fs/NCVECplan.doc

One interesting proposal sure to either enrage or please is the free upgrades for Tech and Advanced. Personally, and I have no stake in this as I'm already Extra, the idea of free upgrades doesn't bother me at all
if it ultimately results in a set of license classes that make sense with regard
to privileges vs requirements. The other two alternatives are:
(1) certain existing licenses would lose privileges (not a good track record on that as we saw in 1968) or
(2) we keep the existing licneses plus the newly defined ones and wait for the old licenses to go SK. Probably not what the FCC wants for enforcement and rules simplification.

Further commentary ad discussion welcome.

And a curse to the first person who introduces any of the lexicon of name calling rather than attempt credible dialog or debate.

Cheers,
Bill K2UNK

> The school owns a wireless access point.
> A student owns a cordless phone.
>
> If a cordless phone interferes with a wireless access point and
> the school's policy says "they have the right to confiscate any device that
> interferes with their wireless network"
> Does the school really have the right to confiscate the cordless phone?

Not only can't they confiscate it, but they cannot even monitor it.

Since the Gingrich interception, the monitoring of cellular and
cordless phones has been illegal. But you knew that.

See any scanner catalog. Notice the really expensive scanners that
anyone overseas can purchase really cheap, but not you?

Those expensive scanners are for law enforcement agencies only. They
receive cellular frequencies. See the fine print.

To be able to monitor cellular or cordless phones requires a law
enforcement agency and a judge. The judge services the search
warrant/wire tap. Except for homeland security. I think just about
anything goes there.

Schools are not law enforcement agencies, or are they?

> Also if a student's device is under part 97 do you still have the right to
> confiscate it?

Barrister Phil should say no. But lately he's been saying all sorts
of things.

> Here is a phrase from Part 15.5.b
> interference must be accepted that may be caused by the operation of an
> authorized radio station
>
> Does this only apply to a device or to an individual using a device?

Are Part 15 devices authorized?

Part 15 says they are. Doesn't say "who" is authorized to use them.
I assume they are lawfully used by citizens, hams, school children,
and even Taliban.

I'm not a communications attorney, nor do I pretend to be one on
R.R.A.P., but Phil might be able to help you - if he's not mistaken.

>pertaining to INTERSTATE commerce. And if needed to provide for the defense
>of one, or all of the states.

Yep - Articles of Confederation.
>
>What the hell happened?

Simple - the founders discovered that the Articles simply didn't work. Without a strong central (federal) government, there was no way to force any of the states to work for the common good if they didn't want to.

Common roads, common monies, common rules and regulations pertaining to interstate commerce and defense of one, or all of the states all require a certain amount of central authority and funding. If New York's legislature decided they didn't want to honor money from South Carolina at face value, who was there to make them? Or if a ship from Maryland didn't want to take orders from an admiral from Maine, what authority was there to require them to do so?

And when it came to taxes.....

End result was another convention here in Philadelphia in 1787, when the Constitution was written and ratified by representatives from all of the states. Three did not sign - they refused to do so because there was no Bill of Rights in the original Constitution. That was rectified by the first ten amendments.

You may not like everyhting the Feds do - I know I sure don't! - but the founders tried the loose confederation idea and it didn't work.

And when it was tried again (1861-1865, 11 states) it ran into the same problems all over again.

In some ways the Feds have been moving towards a weaker central government, by cutting domestic spending - and letting the states take up the slack. Of course the Feds don't give up regulatory control, just funding....

What functions would you have the Feds turn over to the states?

To which question do you answer?

Transmitting a signal even when its not placing a call?

Requirement to turn off a -lawfully- allowed RF device?

Hopefully not yes to both.

> > Oh, yes, the receiver's Local Oscillator "transmits" a

Instead of the "DX" oscillator?

I've heard of cell site conmfirmation from 27 nm.

Thank goodness cell phones don't require a knowledge of Morse Code.

It would have been a monumental flop.

> As soon as a cell phone is powered up it immediately establishes radio
> communications with the MTSO over the control channel, comparing
> SID's, negotiating a registration request, and other similar

Just relax and call it handshaking.

This radio communications occurs even if you
> never actually place an outgoing call or recieve an incoming call.

Doesn't even rate a "duh!"

That's why you find guys at the other end of the tunnel standing by with computer controlled "law enforcement" scanners logging all the codes as you pop out the other side and handshake with the local cell site.

Then they sell them to Taliban operatives and drug dealers.

Holy Moley!

Do you actually accept that Len attended -and- graduated from an engineering school?

This is huge progress in the history of RRAP.

Do we have an Historian?

Where is Rev. Jim when you need him?

Brian

(Next we'll address the meaning of "professional engineer (PE)."

Why cast such doubts?

I'm reasonably sure that Dave has passed the test in any number of
countries, under any number of sunspot cycles or storms.

I doubt I am typical, Dwight. I also don't know if you'd find any posts
like you describe above. However, you're quite wrong about my being
indignant toward *any* form of discrimination. I am and always have been,
as far as I know. I remember even as a kid being offended by such things.
I am just as adamant about women bashing men as I am about anyone else
bashing based on gender, race, etc.

>

Dwight, for goodness sake. I am not going to get into a huge idiosynchratic
dialogue with you about this issue. Suffice it to say that days like Black
Mayoral Conferences are set aside to deal specifically with, well, specific
things. I have no doubt that someone who is on the up and up about their
position in a community--regardless of who they are--is doing their job as
they should be. It sounds like it's an issue for you, though. Sorry I

don't buy into it.

>
> Since those black mayors won't,

I don't know, Dwight. That sounds pretty serious to me...and I haven't
really witnessed such a thing. You point out behaviors that are certainly
around--I won't deny that. But, they are in the minority and displayed by
blithering idiots.

>

> indignation again.
>

"People like me"? People like me?! Describe a "people like me" won't you?
I'm quite offended by the characterization there, Dwight, I'll tell you
that.

The chaos you describe above is that of movies and books. I think this country and the people in it have moved a little bit further ahead than the concepts which you depict above. We're all still quite capable of senseless rage once in a while--but, for the most part, we've become very civil in our dealings with each other. Thank goodness for that. And, we have a long, long way to go.

>

> an event held by whites which specificially excludes other races is
illegal.
>

I doubt that quite seriuosly. Check out many clubs around this country and let me know how many non-white members you see. Hell, there are probably some golf courses Tiger Woods isn't allowed on, for goodness sake.

>
> And I'll add to JJ's examples. What about black colleges which exclude
> other races?
>

Are you as upset about gender specific schools? I gave some other examples, such as women's sports, Girl Scouts, Boy Scouts, Masons, Eastern Star--all and many more of which are specific to "types" of membership, Dwight. I've got pretty much no problem with them.

>
> What about black owned businesses with not a single white
> employee in the entire building (many in my town alone)?
>

Aw, c'mon. How many non-Chinese people are working at your local Chinese restaraunt? Have *you* applied for a positoin at the company you mention, above? Maybe no one's applied. Not saying they don't practice discrimination. If they do, then they're as wrong as wrong can be. Do something about it.

Pah....there it is. Now, that is as discriminatory as you can get, Dwight.
And, I'm glad you walked right into what I was hoping I'd be able to
demonstrate. Based on your opinion of women as demure and refined (ok, I'm
going overboard there), you believe that sports organizations are keeping
women out for the reason of their weakness. That's crap. You don't think
there's women who could train and get pumped up enough to be on a male
basketball team? Football, etc.? Sorry, I've seen 'em in the Ladies' Room.

We are all people. I have every comfort in people feeling the need to
"separate" into their corners once in a while. It is when the separatism
becomes hateful that I have a problem...

That would be farm work, but not migrant farm labor, Dwight. Migrant farm labor travels around the country, following the harvest and the crops, and has to support themselves on whatever they get paid.

Power levels, modes allowed, knowing you can't cuss or jam others, etc.

I think there is some sort of legal precedent that if something isn't in the
test syllabus, a licensed violator may have an out wrt prosecution.

>in this as I'm already Extra, the idea of free upgrades doesn't bother me at
>all
>if it ultimately results in a set of license classes that make sense with
>regard
>to privileges vs requirements.

Free upgrades have a lot of downsides. For example, suppose that a tech gets a
free upgrade to General without ever taking Element 3 or its equivalent.
Doesn't that prove that Element 3 contains nothing that is essential for
General class privileges? Couldn't somebody claim that requiring new hams to
pass Element 3 (or 4) but not requiring existing hams to do the same is
discriminatory?

>The other two alternatives are:
>(1) certain existing licenses would lose privileges (not a good track
>record on that as we saw in 1968) or
>(2) we keep the existing licneses plus the newly defined ones and
>wait for the old licenses to go SK. Probably not what the FCC wants
>for enforcement and rules simplification.

I don't see what the problem is with (2). FCC has kept three "cul de sac"
license classes active for almost 4 years now (Tech Plus/Novice/Advanced) with
no real problems. They're just entries in a database.

And FCC turned down ARRL's idea of free General upgrades for existing Novices
and Tech Pluses.

>
>Further commentary ad discussion welcome.
>
>And a curse to the first person who introduces any of the lexicon

AGREED!

There's also the part about the "no homebrew no voltages over 30" for the Communicator. Not good ideas at all - nor are they realistic.

Yep. Which means to help those things along, not guarantee them.

Equality of opportunity doesn't mean equality of result.

>In my
>opinion, those blessings include a decent living and a fair share in the
>benefits of this country for all Americans (not just the wealthy).
>
I agree!

Now how should the govt. go about promoting that? We've already talked about reducing immigration to increase demand for workers, thereby decreasing unemployment and increasing pay/benefit packages.

The law of supply and demand says that higher prices will be the result of such a move.

What else should be done?

No, the damned rub is in how much our products would cost if the jobs
migrant and transient workers do were paid at much higher pay
scales!!!!!!!!!!!! Not that I want to see anyone suffering...

However, I doubt you'd find the workforce needed to do the jobs even *with*
a higher payscale... Physical labor is an art these days.

Heck *I* wouldn't do those jobs. When I worked farms as a teen ager up in
NY, I drove the tractor or leveled the silage delivery, etc. Ya think *I*
was going to lift those haybales into the wagon, scrape the cowpoop, etc.?
The older folks did all that stuff...we kids wouldn't do it! Well, at least
we kids who didn't have a vested interest in the farms...

But is is a matter of what the producers are *allowed* to pay for the
help. They are *allowed* to break the law. Let's take another example.
The computer industry is undergoing a change now. Many of the good
paying tech support jobs are making a mass migration to India. Why?
because there are people there who will work for a fraction of what
companies were paying American help. Are those jobs that no American
wants to do? This isn't menial labor either.

This shipping of jobs offshore will probably continue until
accountant's jobs get shipped to India. Then we'll see how wedded they
are to their principles!! 8^)

But where do we stop? As I noted to Jim, there are new jobs "going away" from America, like those in some IT fields. Don't expect it to stop there. The companies can pay much less for the help in India, and I guess we are to be happy that our software may cost less. I'd pay a little more for tech help I can understand. Anymore, it is getting really hard to make out what the tech help is telling me.

But there cannot be a white mayors conference to discuss, well, specific things. There are laws against discrimination in this country which makes such events illegal. But those laws don't apply to blacks and other minorities. If it did, the Justice Department would have shut down the black mayors' conference.

> "People like me"? People like me?! Describe a
> "people like me" won't you? I'm quite offended by
> the characterization there, Dwight, I'll tell you
> that.

"People like you" are those who accuse a person of racism without giving that person an opportunity to explain anything you objected to. You did so in the very first message you posted to this thread. "People like you" are those who express indignation against one type of discrimination while trying to justify or explain away another.

> I doubt that quite seriuosly. (snip)

You doubt there are laws prohibiting discrimination? Where have you been for the last few decades? A white oriented event or activity that specifically excludes other races is, and has been for a number of years, illegal. Yet there are events and activities throughout this country each year (such as the black mayor's conference) that specifically exclude whites. Openly allowing discrimination against whites while asserting court litigation against whites who discriminate against minorities is patently unfair. If you want one to be illegal, both should be illegal. And I simply don't think that is a racist view.

> Are you as upset about gender specific schools? I gave
> some other examples, such as women's sports, Girl
> Scouts, Boy Scouts, Masons, Eastern Star--all and many
> more of which are specific to "types" of membership,
> Dwight. I've got pretty much no problem with them.

Most of those are private organizations, not political or business organizations, Kim. The courts say there is a huge difference. And I agree there is a huge difference, which is why I've not mentioned a single private

organization (black or otherwise) throughout this discussion. Instead, I've focused solely on business and political organizations.

> Aw, c'mon. How many non-Chinese people are working
> at your local Chinese restaraunt? Have *you* applied for
> a position at the company you mention above? Maybe no
> one's applied. (snip)

First of all, I don't work for others anymore. I own my own companies. However, to address your specific point, the courts have ruled that the simple absense of minority employees in a place of business can show a "practice of discrimination." But, as I've already said, that doesn't apply to black owned businesses which refuse to hire white employees - as far as I know, there has never been a single successful case against a black owned company for discrimination against whites.

> I think you're going way, way overboard. What about
> "SPIKE" TV? Ya upset about that?

What is there to be upset about? Are they excluding blacks in the television programs they show? Most of the shows I've seen on Spike TV have minorities in them.

> You don't think there's women who could train and get
> pumped up enough to be on a male basketball team?
> Football, etc.? Sorry, I've seen 'em in the Ladies' Room.

That's not what I think, Kim. Actually, since I'm not involved in sports in any way, I haven't given it much thought at all. Regardless, as I understand it, the practice is based on studies that have shown that women are injured more when allowed to participate in extremely physical sports activities with men. That was backed up by medical studies that have shown that the typical woman's bone structure is not as strong as the typical man's, no matter how much she pumps up her muscles in the gym. Where those, and other physical differences, are significant, certain exclusions have been allowed by the courts. Where it is not significant, exclusions are not allowed.

Women participating in those sports activities seem to agree with the courts. Since few of the top women weight lifters, for example, can lift as much as a male in the same weight class, few have expressed any interest whatsoever in competing directly with men. That seems to be the case with most other similar sports activities.

> hold the job?

I agree. Coming from a semi-farm background myself, I certainly know a little bit about the profits earned from farming and the business practices (including labor practices) used throughout the industry. My grandmother and I have talked about such things many times. Anyway, I've seen a slow decline in the wages paid over the years. And I'm not talking about the small family farms. Family farms don't hire that many outside workers. Instead, the practice is seen most often on the large, corporate owned, farms - the farms owned by industries generating billions of dollars in profits each year. And nobody is going to convince me these corporations cannot afford to pay higher wages. If my grandmother can do it and still make good profits, these much more wealthy corporations can certainly do so.

Sorry, Jim, I didn't realize you expected a direct answer to that. In a round about way, I did answer your question when I talked about how immigrates years ago clearly benefited this country. Nobody is criticizing past immigration. The issue is massive immigration today and where we go with it.

No, you don't get it, Dan. There is nothing in my comment about the federal government or state governments taking anything. Throughout this discussion, I've only talked about government policies to stimulate fair wages and reasonable business practices. The government has been doing that, in some form or another, since just about the very first day this country was created (though, IMO, has been doing a fairly poor job of it lately).

The nonsense was directed at your conclusions, Kim. How can you possibly say "no one" is willing to do the work? As I said, the main reason most people aren't willing to (and actually cannot) do those jobs is because of the wages are too low, not because they're not willing to work. People are willing to work if the pay is decent.

> And you'd better be ready to not be able to afford
> almost anything you buy cheaply right now BECAUSE
> of things as they are.

I've already given several ways wages can be increased without significantly increasing the costs of consumer goods.

> Uh, I don't know what home you're talking about, but
> my kids were not spoiled rotten. (snip)

Your kid was used as a metaphor for all kids in general. That should have been obvious since it is clear I don't know your specific kid.

> Didn't say you aren't willing to work. (snip)

Actually, you did pretty much say that, Kim. About me and all other non-immigrant Americans. Your exact words were "no one is willing to do the work a lot of our immigrant population are willing to do." Of course, that simply isn't true (not even close).

> (snip) And you're comments above about how tough
> those jobs are for very little pay and how you wouldn't
> do them...just highlights exactly what I was saying.

I said nothing about how tough those jobs are. Those jobs are the venue of younger people without the aches and pains of older age. I did those jobs when I was younger, but have since moved on to more substantial work over the years to the point of owning my own businesses today. However, there are plenty of young people today more than willing to work. But, as I said, they're not going to be thrilled about working in jobs with wages so low they cannot feed their families and have to live twenty to a hotel room or apartment to help keep living costs down (like so many poor illegal immigrants do today). If this overall trend continues, Americans in the not

so distant future, perhaps your grandchildren, are going to be living just like people do in third-world countries. That's the real future we're leaving future generations.

OH, I see! - You're talking about the government being intelligent enough to keep it's hands off of the economy so that it can mature and grow! I couldn't agree with you more. - And you have history on your side, in this arguement. Every recorded instance of governmental meddling with the parameters of the economy has resulted in fiasco, a net loss.

Keep swinging, Dwight! Let people out there know that trying to legislate prosperity is nothing short of gross stupidity, right up there on par with trying to legislate morality. Tell them that they might as well try to wrap up a gallon of water with a sheet of aluminum foil.

Agreed! But there's a difference between doing it for a summer at a relative's place, and doing it all year long at various locations all over the country or all over a region. And there's a difference between doing it for a relative and doing it for one's living.

Dwight,

I think that when Kim writes "no one" in a context like that, she really means "almost no one" or "hardly anyone" rather than the literal standard meaning "not a single person" or "nobody at all".

Of course there's the economic concept, derived from supply-and-demand, that if you have something nobody seems to want, you have to make it more attractive. With a product, that can me a lower price; with a job, that can mean higher wages/better benefits.

But with the fact that the renewals are pretty much automated, there is very little burden on the FCC as it is. So why bother with changing the existing over to whatever new ones they come up with. Regardless of what they do about the code, the current three tier license system seems quite appropriate as is. I got my Extra under the 5 level system and even then I thought three would be the most appropriate. The current Tech, General, and Extra seem about right to me and also seem about right if the system should go codeless. Tech covers a decent range of the basics for someone to get started for a wide range of amateur activities. General is well within the reach of anyone with a only a moderate amount of effort. Naturally Extra should require a significant "extra" effort.

As far as enforcement being complicated by tracking the old Novice & Advanced in addition to the current three classes, it really doesn't seem to be much of a problem. If you read the published FCC enforcement letters, you see almost none of them going to Novice or Advanced licensees. That's probably because the majority of the Novice licensees are inactive while the Advanced category doesn't contain as many licensees as the others.

You would think so but then again, the CEO's salary is only a drop in the
bucket as a percentage of their operating expenses.

There has always been quite a debate over what the federal government should do versus what the state should do versus what should be left up to individuals. This is due to the fact that the Constitution has words in it to the effect that what is not explicitly allocated to the federal government is reserved to the states and what is not allocated to the states is reserved to the people. So there has always been a tug of war between those who want to see the federal government run more and those who think they should run less. Those who want the federal government to do everything are relying on the preamble's words about providing for the common good and interpreting that to mean carte blanche overlooking the fact that it is just a preamble and that the federal government's actual responsibilities, structure, etc is spelled out the clauses of the body of the Constitution, including the amendments.

>Yep. He was "better" than all that. And, his friends would see him!

I must be getting old. When I was a teenager, I cannot remember anyone I knew
thinking a job was "beneath their dignity". There were some jobs that some kids
did not want to do for personal moral/ideological reasons, (like working for

the IRS ;-)) but those jobs weren't open to teens anyway.

>> What sort of work did he expect to do as a teenager without special
>> skills?

Considering what the elements must be where you are in summer, I can understand
that part. But the rest I don't.

Remember the classic movie "A Christmas Story"?

There's a much lesser-known sequel called "Ollie Hopnoodle's Haven Of Bliss".
(named for where Ralphie's family goes on summer vacation during the last two
weeks of August).

In that film, Ralphie is a teenager and gets a summer job in a
furniture/appliance warehouse. Hilarious but also very good lesson. Ralphie's
attitude towards his dad completely changes.

>today...

I think the whole "work ethic" thing was dreamed up by the top dogs as a way to get the little dogs to work without questioning the system. A businessperson or government official with a pile of FYM salted away is in a differrent place than someone living paycheck to paycheck.

I'm not saying that a laborer's work on the dam was anywhere near as "valuable" as the project manager's - but the pay and risks were entirely out of line.

It wasn't that the work ethic was greater - the desperation was greater. What did your kid do for spending money without a job?

Right! Massive subsidies, a "wink and a grin" when it comes to hiring workers that legally can't be hired, etc, etc......

I remember a few years ago, there was a Dem candidate for some position, and it was found out that she and her husband had hired an illegal immigrant as a housekeeper. There was enough outrage that she withdrew herself from consideration for the position.

She was wrong to do what she did, of course. But was she more wrong than the corp farmer that hires illegal immigrant help?

Sure! Corning Glass which recently closed in my town, had this
situation. The "hot" end of the building had work which was hot and
fairly dangerous, as working with molten glass is going to be. To entice
workers there, they were paid quite well. Simple supply and demand.

They are history now, and won't come back, as they can't compete with
the foreign sources. The foreign sources are so heavily subsidized by
their respective governments that it is just about impossible to compete.

I wonder what we'll do when the last manufacturing jobs are gone from
the US? Run up a white flag? (made in some other country, of course!)

There are still plenty of young people willing to take "menial" labor.
My son worked all summer cleaning a warehouse and tearout and hefting
the new materials on flooring construction. There were other people his
age there too. His girlfriend has *two* jobs (which is way too much for
a high school senior, IMO)

>

I think its a big broad brush the situation is getting painted with
here. I don't know enough about all kids to know what all kids want to do.

an aside: I have seen a few other cases where an unemployed person was
above the jobs available. In each case, the underlying problem was
depression. Not to sound alarmist, but you might keep an eye out for
that, Kim.

I don't know what the attitudes of welfare recipients are. I do know that it's simply human nature to adapt to what a system provides. For example, if going

off welfare means giving up health care benefits for dependents with chronic illnesses, would you do it?
>
>> What sort of work did he expect to do as a teenager without special

All true - but there was also an attitude that the workers were expendable. There were even estimating formulas for how many lives a particular job would

take.

Did OSHA come about because employers or the marketplace suddenly got a conscience?

Yep - another excellent example, with documentaries. Yet ironically all those dead finally forced serious research into tropical diseases and resulted in changes that saved many lived and improved health in those areas.

OK, your answer is clear now.

>Nobody is criticizing
>past immigration.

I would point out that back in 1906 there were people criticizing the immigration of those times. Particularly immigrants who weren't from the "right" parts of northern and western Europe...

Every wave of immigration *was perceived* as a threat to those already here, because:

- they would usually work for lower wages and benefits
- they brought with them strange customs, clothes, languages and religions
- once Americanized, they added to the competition for jobs, education, etc.

Immigration quotas were enacted early in the 20th century for all these reasons and more.

Some folks feel that one reason slavery died out in the north was the northern tendency to encourage immigration as a source of cheap labor. IIRC, there were *antiwar* riots in New York City in 1863, in part because some folks (including recent immigrants) were afraid that freed slaves would migrate north and compete for jobs.

>The issue is massive immigration today and where we go
>with it.
>
I think that for the reason of national security alone, we have to:

- change the criteria for legal immigration
- reduce/eliminate illegal immigration and visa abuse
- work towards better labor practices through both government and marketplace

action

Naw,

I've used am back in the 60s, but consider it too wide a mode to be considerate of others. 10 meters, perhaps, as it is wide, but not the lower bands.

Why would I want to disturb the neighbors?

Well, the fact that jobs are moving away from this country is not new--it's been going on since I was in High School. And, while I don't like it, I'm not going to get all bent out of shape over it--because there's not a damned thing that's ever been done about and there will never be. The only way to stop it from happening is to have the "rest of the world's" standard of living raised. Or, ours lowered. It seems to me that as jobs have moved out of this country (industries, we should say); they are slowly replaced by others. That is to say that it seems almost a natural transition that has been happening for at least two generations now. Sure, there are great numbers of people displaced by the practice--but the economy and job markets have recovered in every instance.

Personally, I could never figure out why the computer industry was as it was in this country. When one considers that the technology of computers and its resulting industry can literally be transported over phone lines, how in the world is it that there was such a glut of computer, and telecom for that matter, in this country? Some tech support person from across the ocean can access my computer and help me fix it.

Consider this. I've been toying with the idea over the last few years that it will the "menial" (as was put by someone else--I don't agree with the term) jobs that will gradually grow to the higher paid jobs in this country...because there will be less and less people who *will* do them. The "services" of a migrant worker or a fast food person, or a municipal worker or construction worker will become so highly needed, that they will be able to demand a pretty penny for their work. Everyone will want the sit-down-in-the-AC jobs and no one will want to work outside--where the meat of our lives comes from.

What I object to is that they put people in customer service who speaks the language so poorly that their help is worthless. I had this happen while I was trying to cancel one of those "free internet trial subscriptions." It took at least 15 minutes to get them to understand that I wanted it totally canceled.

I am real philosophical...to my detriment actually. I see the world through rose colored glasses and there's not much that can mess that up. I would like for anyone who would like to come to this country, come. I think they need to be willing to work; should not look to government funded programs for their livelihood; and should be willing and eventually able to accept American culture--which truly is a metling pot with very few "traditions" that aren't twists of things from the "motherland."

That this country would bulge with huge masses of people? It's doing that already. Look simply at what has happened in Miami, FL. A hugely Cuban population, in a matter of a few years. Did all the "Whites" from Miami die? Move? Get dumped in the ocean? Maybe they weren't particularly happy over what happened in their city/county, but it happened and some folks are still there, some have moved--I'm nearly sure; and some may even be on a campaign to "reown" their city--I don't know.

Fact is, this country is looked to by immigrants who come to our shores...the greatest nation in the world--even with its flaws and errors. And, I welcome each and every one who, as I said, has a dream with a vision and passion to see it happen--*without* (as I also said) government funding or tipping my tax dollars their way.

What *DOES* immensely disgust me is the amount of money this country sends out to others. I am so hugely angry when I think of that, that I can hardly see straight. $80 billion dollars to Iraq?????!!!!!! Indeed. And, that is just one tiny instance of what I'm speaking about. Tell you what: I'd rather see those folks here in this country as immigrants than be pumping those dollars (*our* tax dollars) out when our infrastructure is in such disaray.

Well, see....I can't speak for other areas. But, of the friends and families I know and have known, there are more kids who think like my sons did than do not. And, part of it is this idea that mommies and daddies *had* to give the kids cars, a college education, life on a platter so-to-speak. Kind of like what Dwight was alluding to. *BUT* Dwight's characterization that it is "those" kids who think like that? I totally disagree. My sons, nor many of those children of friends and families I know, were not given a thing. And, they *still* had that opinion. My

theory is that they still thought like that because they "wanted" to be like those --rich-- kids and those rich kids think like that.

My sons also were not raised in a prejudiced home--yet my youngest son is one of the most bigoted people I know--no kidding.

> that part. But the rest I don't.
>

Well, true. But, for instance. My husband's company that he's worked at for 27 years (a canvas awning shop) has just gone through quite a transition. It was a family-owned company that his mom sold a couple of years ago. The new owner saw the talent and skillset that my husband brings and took him off the installation truck and he's been an "inside" Gen Mgr ever since. Well, this year they saw a reduction in workforce (people quitting) and Cliff had to go back out on the truck a couple of months ago. I mentioned this to my youngest son and he said, "No way I'd do that. You tell Cliff to quit." His (my husband's) brother-in-law quit because he was being asked to work for a change--instead of his laziness being swept under the carpet because he's "f-a-m-i-l-y."

Most of us--those your and my age--are still in the generation that we "do what we gotta do." But, when one looks at it realistically and sees the writing on the wall--we are at the tail end of that kind of thought-pattern. Even we have less "gotta do it" than our parents have/had, because I know I've heard my father encourage things of us that make me think he is from another planet!

>

Hmmmm. Nope. I think we didn't do it because we didn't want to do it. I learned real quick all I had to do was a pretty bad job at anything before I got that job taken away from me. I might get one that was thought of as a little worse--but that person's "worse" was, perhaps, something that I didn't mind doing so much. You know what I mean?

What
> did your kid do for spending money without a job?
>
> 73 de Jim, N2EY
>

He went without. And, was apparently happy to do it. Now, I say he wouldn't work--he *did* end up with a job painting houses (interior) with a friend of mine. He was there every day and never was late, etc. I took him to work and picked him up until he had enough money to buy his car, his insurance, and all the things that go with it. He quit school, not with my blessing, but he quit. I told him that if he quit, he was to go immediately and get his GED--which he did--and he was to immediately get a job--which he did. The things that would have stopped me dead in my tracks from quitting school when I was a kid, were seen as very little hurdles to him.

I hated the job he had, because he was breathing paint fumes all day. So, I bought him a full fledged respirator and simply asked him to consider wearing it. He would, but only when they were doing varnish on wood cabinets. What I am getting at is--once again--why after all his "no's" was he so willing to take and stay at a job I considered very, very crappy? He was a 17-yr. old kid making nearly $12.00/hour. Plus his boss was a great

guy...really was. Was more of a pal than a boss and that's all it took for my kid to be a half-way decent employee. Now, near 30, he's still never made a huge success of himself, but he's a lot more ahead of those who were his friends in "those days." They are all welfare dads, standing on the corner every day waiting for someone to pick them up for a job, or they have several jobs a year. And, to get my kid to that point that he is took every bit out of me as a parent that I had to give. When you see a "good kid" these days? Look to the very beat up person behind them who has sacrificed and drained their emotions nearly to the end... ;)

I am interested in expanding my freeband hobby but do not wish to take t
he General class hammie test until the code is dropped. My question is d
oes anyone know when the code will be dropped and how long woould I need
to wait until the written General test is simplified such as the Tech t
est is now?

Plase email me a WAV of morse code so I can hear what it sounded like wh
en the old hammies used it.

>Barrister Phil should say no.

Radio devices cannot be consfiscated by anyone because they are not
contraband as "controlled substances" are.

The school can seize (remove it from the student's possession) and
hold it for safekeeping until the student leaves the property only
if the student is on notice that this will happen if s/he does not
voluntarily turn it off or refrain from using it.

Of course the school will use the word "confiscate" but that's not
what's happening.

>But lately he's been saying all sorts of things.

In which of the two languages that I am fluent in, the one language
that I can stumble through, or the several languages in which I can

There is a restriction that Part 15 devices cannot be used for any
unlawful purpose. Ordering a plate of hummus and ypreki (stuffed
grape leaves) or kibbe (ground lamb kebabs) is not unlawful.

with
> no real problems. They're just entries in a database.

They are more than just database entries. They also have specific
privileges which
differentiate them from the "lower" level licenses. IF the FCC granted
identical
privileges to Advanced rather than doing a "free upgrade" of Advanced to
Extra,
THEN the old licenses would be just a database differentiator.

> And FCC turned down ARRL's idea of free General upgrades for existing
Novices
> and Tech Pluses.

The FCC once was looking for a consensus of hams before it would
entertain dropping code speeds.

> >Further commentary ad discussion welcome.

>join the KKK.

Dwight:

I consider the KKK to be about racism, not slavery. It was originally started as a response to the heavy-handed political disenfranchisement of the former Confederate states by Northern "Carpetbaggers" who essentially swept into the South and took over in the aftermath of the Civil War. I don't believe that was right and never said so. However, the KKK, instead of targeting the mostly white Yankee politicians who violated the constitutional rights of the citizens of the Southern states, chose instead to target ethnic and religious groups, such as blacks, Catholics, and particularly Jews. Therefore, their motives were wrong from the start.

>> The South has a lot to answer for, IMHO. (snip)

However, in the context of our modern and presumably more enlightened
times, they represent something that is, best, an anachronistic example
of age-old prejudices. We should all be united under one flag, and that
flag has 50 stars and 13 stripes -- not a big "X" running through it.

>
>Ryan

Ryan:

Right on. I think that at the very least, we should be getting a secure supply
of oil at VERY favorable prices from Iraq, as a result of liberating and
subsequently re-building (or just plain building) their country. As I said
before
the start of the Iraq War, if the war isn't about oil, then we had darn well
better find a way to make it be about oil! For all we have paid so far to
liberate Iraq, both in American lives and U.S. dollars, we should be enjoying
the world's lowest-priced gasoline for at least the lifetime of every American
living today.

America does not export terror. We export freedom, democracy, and
wealth. We're the good guys. We should not be afraid to be the strongest
nation on the planet, because through that strength, we can continue to
do good things for every other nation. Moreover, as long as the young
men and women who serve this nation are willing to sacrifice their lives
to help other countries achieve this freedom, it is only right that they
hold the expectation that by so doing, they will be gaining something
of tangible value for our nation as well.

>
>73 from Rochester, NY
>Jim AA2QA

Jim:

The United States, like any other nation, has a right and a responsibility
to control it's immigration policies. I don't believe that in these modern
times it makes sense to grant automatic, natural citizenship to the
children of people from other countries who have not undergone the
legal immigration and naturalization process. Yes, it is true that we
are all the descendants of immigrants; however, the immigrants I
descended from all came into this country legally, and were legally
naturalized under the existing law. Considering how much this country
has to offer, especially in terms of welfare benefits which would turn
a poor immigrant from an impoverished nation into a person who would
be wealthy by comparison to those from his home country, I don't
believe it is too much to ask for them to obey the law.

As I stated previously, liberal immigration policies usually serve a political
purpose, rather than a purely humanitarian one. For this reason, I
think closing some of the loopholes and requiring that those who wish
to come to the U.S. and become citizens to follow the correct immigration
and naturalization procedures, makes good sense from a "homeland
security" standpoint.

I know what she means, but it's not what she wrote, Jim. And if we can't get past the absoluteness of that "no one," there is little way to continue the discussion. If we're instead talking about "almost no one" or "hardly anyone," then the obvious question becomes why bring in immigrants to take even those few people's jobs or drive down their wages. Of course, I don't really expect Kim to answer those questions. Few seem to care about the Americans who are losing their jobs, or are seeing their wages reduced, as a result of immigration and other government policies. They have their pro-immigration blinders on and refuse to see the obvious fallout of these government policies.

I look around and see many in my hometown (a small town) unemployed or working in low paying jobs while every factory in the area closes and immigrants move in to take jobs. A friend, who has been doing lawn care for almost three decades, recently lost a long-standing contract to another out-of-state company using all immigrant employees. As a result, he filed for bankruptcy and had to fire his entire workforce - Americans who were willing to work.

I'm feeling the pressure right now. One of my companies (wetland maintenance) is facing competition from a company with almost all illegal immigrant employees. I just barely held onto a county contract last time, but profits are now dismal. To hold onto that contract next time, either I cut my employee's wages sharply or I replace them with illegal immigrants. The only other option is to not even bid at all, which means the other company (with it's illegal immigrants) is assured the contract (and I let employees go).

The economy of this country is quickly heading to hell in a handbasket and few seem to even notice or care.

> like that........

Most of those subsidies are in the form of market management, Robert. In other words, they're designed to prevent gluts or shortages of farm goods. Perhaps the easiest way to understand it is to look at an example. Lets say there is a shortage of green beans this year, which has driven up the costs (and, for the farmer, sale price) of green beans. At the same time, there are too many tomatoes on the store shelves this year, driving down costs (and the sale price for farmers). Obviously, farmers want to make maximum profits, so farmers throughout the country next year will decide not to grow tomatoes and to grow green beans instead.

Of course, if this happens, there is going to be an extreme shortage of tomatoes next year and way too many green beans. To prevent this, the government steps in to ask some farmers to grow tomatoes instead of green beans. But, to comply, the farmer has to give up any potential extra profit he might make if he can beat other farmers to market next year before the price of green beans fall as a result of the glut. And, of course, there won't be any extra profits from the sale of tomatoes next year if the government is successful in getting some farmers to grow them.

In the end, few farmers are going to agree to grow tomatoes. At this point, the government sweetens the deal by offering money to some farmers in the form of farm subsidies to encourage them to grow tomatoes instead. Since this extra money is a sure thing, the farmers agree to grow tomatoes. The end result is that there are both tomatoes and green beans on the store shelves next year.

This is one form of market management. It also happens when the profits of one product are always lower than the profits of another. For example, there is always more profit in growing corn than watermelons (even with the different prices in the stores). Watermelons are a low yield crop while corn is a high yield crop, meaning yon can grow much more corn then watermelons on the same amount of land. Without farm subsidies to encourage farmers to grow watermelons, very few farmers would.

End of Government Agriculture Management, Lesson 101. ;-)

As far as I know, my grandmother has never received farm subsidies. In fact, subsidies are rarely even available to farmers with family, small, or mid-size farms since their contributions to the overall market is relatively small. My grandmother's farm was considered a mid-sized farm.

Okay, if you want to make that fine of a distinction, while it is certainly true I never worked a farm laborer job as my sole income, let me also add that I did work for other farmers in the area while both a teenager and young adult, as nothing more than another paid laborer (no family connections). Many teenagers in the area did it during the summer to earn extra money and many young adults made a living as farm laborers (I continued to do it occasionally as a young adult to subsidize my income).

Of course, I just don't see the fine distinction you're suggesting here. A day, week, or month's work on the farm is a day, week, or month's work on the farm. If you're doing laborer work, the work doesn't change based on who you are or where you live other times of the year. If anything, while working for my grandmother, I felt I had to work harder to earn the other workers' respect of my worth to get the same pay (and to prove I wasn't just a city boy). And I continued to work after they went home for the day. Farm equipment had to be cleaned and put away. Machinery had to be cleaned, fueled, and oiled for the next days' work. Barns had to be monitored. The other normal chores around the farm continued. Later, after those laborers left for the year, fields had to be plowed for next years' crops. For the farmer, work doesn't end with just pulling the crops out of the fields.

Part of the problem was that immigration was being sold at the time as a way to grow and further tame the West, while many immigrants simply couldn't afford to move West once they got here - something the government seemed to have overlooked. The result was a flood of new immigrants into Eastern cities. Of course, the government did eventually get what it wanted as many in the East simply moved West to get away from the new immigrants. Just kidding (I think). ;-)

> Immigration quotas were enacted early in the 20th
> century for all these reasons and more.

Many of those quotas lasted well into the 1960's (my wife is a history major and she was just reading about them a few days ago).

I agree. There isn't going to be an easy solution. Multiple steps, in just the areas you describe, will have to be taken to insure a lasting solution instead of a quick fix that falls apart in a few months. Sadly, we don't seem to have any long term plans in this country - a game plan that stretches out beyond just the next year or so. Bush is gearing up for next year's election, but what about the month or year after that election? What about ten years from now?

Just saw on the news that more blacks are leaving the North for the
South than blacks leaving the South for the North. Reason? More jobs in
the South and less racism.

The "particularly Jews" is news to me. I know the KKK doesn't especially like Jews today (to put it mildly), but I've read a lot about the early KKK and don't remember seeing anything about Jews being targeted, especially "particularly" targeted. Can you provide a source where I can read more about this?

I think you're interpreting the whole thing wrong, Larry. Very few in the South see that flag as a statement about slavery or racism. From my observations, most see it as a way to stick up their middle finger at a government they don't particularly like. For example, the flag is displayed most often when a liberal is in the White House and less often when a conservative is in the White House. A few years ago, during the Clinton years, you could see that flag everywhere (vehicles, yards, and so on). Today, it has virtually disappeared. When another liberal gets in the White House, that flag will suddenly show up on everything again. The more liberal that person is, the more you'll see that flag displayed.

Amazing that you can interpret all that from my post, which I had thought to be fairly straightforward and easy to understand.

Let's try again: The kind of economic manipulation that you are advocating has been tried many, many times, with consistently poor results. It is not "new" and further manipulations of this kind would not be a "change", as it has been tried extensively already. - Again; With consistently poor results.

A good "change" would be to adopt a more intelligent attitude about the market and resist the "Pollyanna" temptation to attempt to legislate prosperity.

Of course it could be that you will read this and conclude that I must mean that parrots are smarter than doves, so they would be the best thing to use for a messenger service... After your left-field response to my first post, I would not be at all surprised.

This may point out where some of our economic woes may originate.... Are all people who advocate manipulation of the economy by well-meaning fools functionally illiterate? Perhaps that is what keeps them from learning the simple lessons of history, tempting them to advocate old, bad ideas that are conspicuous for thier repeated failure?

Amateur Radio Newsline™ Report 1368 – October 31 2003

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. Free FTP Downloads are available at our website by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

Amateur Radio Newsline report number 1368 with a release date of Friday, October 31st 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio comes to the rescue as southern California is swept by wildfires and a new Amateur Radio satellite will be launched early next year. Find out the details on Amateur Radio Newsline report number 1368 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE SOCAL FIRES

From the Mexican border to the suburbs north of Los Angeles, large sections of the Southern California were under siege the past week. This, as ten major and several smaller wildfires blazed their way across the area.

Fanned by hot, dry Santa Ana winds gusting to 60 miles an hour, the wildfires dervored everything it their path. At least a eighteen people are dead and over 1500 homes and businesses have been destroyed. And as we go to air, well over 1 million acres have burned.

Gordon West, WB6NOA, has been at one of the busiest Red Cross evacuation centers for the past several days. He took time out to file this first hand report on how hams are aiding in fire relief efforts:

--
Audio report only. Hear it at www.arnewsline.org/quincy
--

As we go to air, ham radio operators continue their firefighting communications support efforts. More on their role in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESCUE RADIO: KCOP REPORTS ON HAMS DOING FIRE DUTY

Los Angeles television station KCOP appears to be the only one so far to mention the role the role ham radio operators are playing in fighting the Southern California wildfires.

On Monday night October 27th, the stations 11 P.M. newscast showed video of a group of unidentified hams at their radios in the Los Angeles western suburb of Simi Valley. At the same time anchorman Rick Garcia read a brief synopsys of what the radio amateurs were doing. It explained how the hams could provide communications between the various relief agencies that could not speak directly with one another.

While short and simple, the report was well written, accurate and nicely done. KCOP is one of two Fox owned stations serving the Los Angeles area. (ARNewsline(tm))

**

RESCUE RADIO: CALIFORNIA WILDFIRES FROM SPACE

The wildfires that ravaged southern California were even impressive from space. Just before returning to Earth, NASA astronaut Ed Lu took photographs from 240 miles above the fires through the windows of the International Space Station. The photos taken on Sunday October 26th are on-line at www.spaceflight.nasa.gov/station. (NASA)

**

RADIO LAW: AUTHORITIES LOOKING FOR ALLEGED TOWER TERRORIST

Law enforcement authorities in northern California and southern Oregon are searching for a man seen tampering with electrical towers. This, as one official says that the incident smacks of being an act of domestic terrorism.

According to the CGC Communicator, the latest incident took place the week of October 20th just south of Redding California. It involved a heav-set man who used large wrenches to completely unbolt one leg of a four legged transmission tower.

Authorities say that he had half the bolts removed from a second leg when he was spotted and fled. Witnesses chased the suspect onto Interstate 5, where he

sped south into Tehama County and disappeared. As we go to air he is still at large.

According to a news release from the Federal Bureau of Investigation, the suspect is similar in description to a man seen removing bolts at another tower near Klamath Falls, Oregon earlier in the day. He is described as a white male, in his early 60's with long, blackish-gray hair and a salt-and-pepper beard.

More details on this story and the suspect are in cyberspace at: http://redding.com/top_stories/local/20031022toplo043.shtml (CGC Communicator)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world and this week recognizing the support of the Quarter Century Wireless Association and its chapters world-wide.

(5 sec pause here)

**

HAM RADIO IN SPACE: ECHO LAUNCH ANNOUNCED

Ham radio will soon have another new bird on orbit. This as AMSAT-North America announced that launch of the AMSAT OSCAR-E will take place on March 31st. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

That's right. Some really good news on the ham radio space front. This, as word comes that the Echo ham radio microsat is now scheduled to launch on March 31, 2004.

Earlier plans had called for a May 2004 launch for the tiny bird. Echo Project team member Richard Hambly, W2GPS, reported at AMSAT-North America's Annual Meeting that the project has made significant progress in recent months. So much so that advancing the launch date was possible.

Echo is a fairly simple ham radio by todays standards. It has two UHF transmitters. Each one runs from 1 to 8 watts and the bird is capable of simultaneous operation. Also on board are four VHF receivers and a multiband, multimode receiver capable of operation on the 10 meters, 2 meter, 70 cm and 23 cm bands. This means all sorts of transmit and receive band combinations will be possible once the tiny ham-sat is in space. This includes PSK31 on a 10-meter SSB uplink.

Hambly says that the project team powered up the Echo flight hardware in late summer at Space Quest. Data communications, command and control, and attitude control subsystems were tested. Also checked out were the radio equipment, power systems and cabling. It all checked out and that's good news for hams waiting for this latest addition to its family of birds in space.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

A Russian rocket will carry the 10-inch-square satellite into a low-Earth orbit from the famed Baikonur Cosmodrome in Kazakhstan. (ANS)

**

PROPAGATION: ANOTHER CME AT SUNSPOT 486

More solar activity affecting ham radio. This, as one of the most powerful solar flares ever recorded erupted on the Sun the morning of October 28th.

It happened near giant sunspot 486. That’s the sunspot we reported on last week and this latest explosion hurled a coronal mass ejection or C-M-E directly toward Earth.

Based on the speed and recordings it was expected to to impact the Earth’s Magnetosphere at about 1500 U-T-C on October 29th. When it hit, the shock alone wold produce a G 3 level geomagnetic activity. A level high enough to produce bright auroras at high latitude sites such as Scandinavia, Alaska, and Canada.

As hams are well aware, a solar storm can fully disrupt communications on some bands while creating unexpected propagation on others. What this one is doing is still developing as we go to air. More on this story as the reports come in. (ASWLC)

**

DX DEBACLE: ANNABON ISLAND TEAM SPEAKS OUT

An update to the plight of the plight of the Dxpedition group forced to flea Annabon Island a few weeks ago. Jeramy Boot, G4NJH, is in Nottingham England with the rest of the story.

--

We reported two weeks ago that the 3C0V DXpedition to Annobon Island - off the west coast of Africa - had been forced to close down but at that time the reason for the enforced closure was not known. A press release has now been issued by the 3C0V team which says that all four operators - DJ9ZB, EA5YN, EA5FO and EA5BYP - are now back home safe and sound.

The press release says that each operator had proper individual licences and the group had written authorisation to import and operate amateur radio equipment on the island. However, on the 4th of October the military authorities there demanded that the group should dismantle the stations and leave for the Equatorial Guinea capital. Two days later DJ9ZB and EA5FO were allowed to leave the country but the other two team members remained in the capital until the 10th, when they were eventually able to return to Spain.

Jeramy Boot, G4NJH.

--

The complete press release is in cyberspace at www.tabarca.es.mn Wew will have more DX news later on in this weeks program. (GB2RS)

ENFORCEMENT: FCC WRITES TWO CITIES ABOUT INTERFERENCE TO THEIR HAMS

The FCC has contacted officials in two cities about interference to their local ham radio operators. The Agency’s Daryl Duckworth, NN0W, explains:

--

Duckworth: “The mayor of Lubbock Texas, along with copies to the Lubbock City Manager, the Lubbock City Attorney and Lubbock Power and Light have been sent a letter concerning interference to Brian Edwards, W5KFT. This interference, possibly from equipment operated by Lubbock Power and Light, dates back to 1998.

Along similar lines, the mayor of Gouverneur, New York, has a follow-up letter concerning the lack of response to a previous FCC notification of RFI to Morton Howard, W2ATO. The mayor has 15 days from receipt to reply.

This has been Daryl Duckworth, NN0W, reporting.”

--

Both mayors were invited to contact FCC Special Counsel Riley Hollingsworth if they have any questions concerning these matters. (FCC, RAIN)

**

ENFORCEMENT: FCC RAIDS SAN FRANCISCO UNLICENSED STATION

The Federal Communications Commission has raided the San Francisco couple's home and shut down an unlicensed radio station. The action removed Liberation Radio, a low-power alternative FM station that broadcasts political views and independent music programs from the airwaves.

The operation took place at the residence of Jim and Charlotte Hatch. The Hatch's had been told to take the station off the air before the raid. Their first warning came in July, when FCC investigators showed up at the couple's home and asked to inspect the equipment. They refused the FCC entry and were warned that they faced a potential $17,000 fine.

Instead, agents returned on Wednesday October 15th with a search warrant and more than a dozen federal marshals and confiscated the stations’ broadcast equipment. This included the transmitter, mixing console, computers, tape and CD players, turntables and even the rooftop antenna.

No charges have yet been filed against anyone associated with the station but further enforcement action is expected in this case. (Published news reports)

**

ENFORCEMENT: TEXAS FIRMS CITED FOR CB RADIO VIOLATIONS

The FCC has cited David P. Pace Jr of Nacogoches, Texas, for alleged violations of its rules dealing with the sale of 11 meter C-B gear. According to ther agency, Pace, doing business as Pacetronics and Pace Marketing was offering for sale more than three dozen types of non certificated CB transceivers under the guise of them being ham radio transceivers.

According to the ARRL Letter, the FCC evaluated similar radios and found that the devices at issue are not only amateur radios but can easily be altered for use as Citizens Band devices as well. The regulatory agency says that dual use CB and amateur radio gear cannot be certificated under its rules.

The FCC also warned Pace that its rules requires certification for external RF power amplifiers or amplifier kits capable of operation between 24 and 35 MHz. The FCC asked Pace to submit a written statement describing actions taken to correct the apparent violations. The FCC's Dallas office issued the citation. (ARRL)

COMMUNICATIONS CRIMES: FLORIDA MAN CONVICTED OF VIOLATING DMCA

A Boca Raton Florida man has been convicted of selling hardware to illegally tap into DirecTV satellite broadcasts. Following a four-day trial in federal court, a jury has found that Thomas Michael Whitehead guilty of one count of conspiracy, two counts of selling devices designed to unlawfully decrypt satellite television programming and three counts of violating the Digital Millennium Copyright Act.

The Digital Millennium Copyright Act is a 1998 federal law that makes it illegal to make or sell any technology designed to get around copy protection measures such as the electronic cards used by DirecTV to give consumers access to its programming. With his conviction, Whitehead becomes the first person to be found guilty by a jury under it. He faces a maximum sentence of 30 years in federal prison and up to up to $2.75 million in fines. (Published news reports)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: GET READY FOR BOOK RFI

Remember those Radio Frequency I-D tags that are of such concern to ham radio? Well you will never guess where they are about to show up. Ken Butler, W1NNR, tells us:

--
The San Francisco Public Library's plans to track books by inserting an RFID

tag to each one. These are the same radio tags that hams tried to get the FCC to not deplioy earlier this year.

Now, library officials in the Bay area say that they will install the RFID's, into the roughly two million books, CDs and audio visual materials patrons can borrow. The system still needs funding and probably will not be ready for deployment until at least 2005.

--

So in a few years when you receive QRM to your ham radio operations, you might find that its coming from that novel you are reading late at night. (Science Today)

**

CONVENTIONS AND HAMFESTS: HAMVENTION 2004 WILL BE AT THE HARA

The Hamvention will remain at the HARA Arena through 2004. This, according to an announcement from the Dayton Amateur Radio Association which says that it has signed a one year contract that will keep Hamvention at the facility through next years outing.

The Hamvention planners are also looking for volunteers that want to help make Hambention 2004 a big success. To help gather support a new volunteer your services form is available at the Hamvention website. Its an on-line, fill in the blank form and you will find it at www.hamvention.org/volunteer.html. Just fill it out and the Hamvention folks will get back and let you know how you can assist.

The 53rd annual Hamvention will be held May 14th through the 16th, 2004, at the HARA Arena in the Dayton suburb of Trotwood Ohio. (DARA)

**

CONVENTIONS AND HAMFESTS: MICROWAVE MEET IN THE UK

Meantime, word that the Martlesham Microwave Round Table will take place on Saturday the 8th and Sunday the 9th of November. This, at the B-T Adastral Park, near the city of Ipswich in the United Kingdom. Featured will be a full program of talks and seminars including speakers from Europe and the United States along with a giant flea market. Full information is on-line at http://mmrt.homedns.org. There is no www in this URL address. (GB2RS)

**

ON THE AIR: THE 2003 SIX METER SPRINT

Last weekends 6 meter Sprint brought quite a bit of operation to the Magic Band. NEZ0P, one of the stations posting to the VHF Reflector says that he heard or contacted several semi rare stations for this time of the year. This included AA7J in grid DN-30, VE3CDP portable W9 in EM-58 and a couple of others. John adds that he held 34 Q-S-O's with stations in 25 grid squares during the short operating event. This included contacts into Maine, New Hampshire and Vermont. Not bad for a band that usually produces little

excitement at this time of year. (VHF eflector)

**

ON THE AIR: THE BAJA NET INVITES YOU

Berand Kirschner, WB0YCQ, reminds everyone that the The Baja Net meets daily at 08: 00 local California time on 7.238 Mhz. Kirschner describes the Baja Net as a friendly gathering spot for boaters. RV'ers and others who carry ham radio as they roam. (WB0YCQ)

**

DX

In D-X, word that ES1FB plans to be active as XW1FB. This, from Vientiane, Laos, threough the 4th of November. No word on times, frequencies or modes. (GB2RS)

Also on through November 4th will be K3BYV and N3CXM. They will are active as PZ5DX and PZ5JR respectively from Suriname. For both operations,. QSL as directed on the air. (GB2RS)

And GB50RAEN is on the air to celebrate the 50th anniversary of the founding of Raynet. Raynet is Great Britain'd equivlant of our ARES and RACES combined. The station is being operated by groups from West Midlands Raynet in the UK. (GB2RS)

Lastly, VK8NSB reports via Q-News that the Darwin Amateur Radio Club in Ausrtralia's Northern Territory will be operating a special event station to celebrate 25 years of self government. The station signing VI8NT will be on through the 31st of December. QSL directly to VK6NE or via the bureau. (Q-News)

**

THAT FINAL ITEM: ARNEWSLINE(tm) NAMES NT3V NEW CHAIR OF YHOTY COMMITTEE

And finally this week, we at the Amateur Radio Newsline are happy to announce the appointment of Mark Abramowicz, NT3V, as the new Chairman of our Young Ham of the Year Award Committee. Abramowicz replaces Larry Zettwoch, KR4IF, who served in that position the past 9 years.

For those of you not familiar with NT3V, Mark hails from Reading Pennsylvania, and happens to be the father of our 2002 Young Ham of the Year award recipient, Josh Abramowicz, KB3GWY. But Mark and Josh are not the only hams in the Abramowicz family. Mark's wife Suzanna is NZ3G and his daughter Amy holds the call sign KB3IJW. Only the two youngest members of the Amramowicz family -- sons Jonathan and Jordan are not licensed. At least not yet.

By profession, Mark is a news reporter and anchor at KYW radio in Philadelphia where he is known professionally as Mark Abrams. He is also is an adjunct professor at Temple University where he teaches writing for mass media and broadcast newswriting. And like his predecessor, Mark is very involved with the scouts and scouting program as are his two older children.

A very nice bio on Mark Anramowicz, NT3V, can be found at the KYW website. That U-R-L is http://www.kywam.com/staff/bios_detail.cfm?biosid=53 (ARNewsline(tm))

> anyone," then the obvious question becomes why bring in immigrants to take
> even those few people's jobs or drive down their wages.
>

And, if you want to argue symantecs, Dwight, then you have a roadblock that won't allow for reasonable discussion of the topic. I am telling you that my experience has been that people who are customarily born in this country feel that the jobs we are speaking of are beneath them. Period. Now, the only areas of this country that I have lived in with enough time to gather that opinion is in NE NY and down here in the DFW area. If your experience is different--sobeit. But, how dare you dismiss the experiences I have seen.

Not only am I basing the opinion I have off true experience and observations, I am also an above-average (or was) politically active person. When topics like this come up on radio talk-shows, television news magazine shows, and in Congress--which I used to spend hours and hours every day watching--the discussion is that "immigration" is killing jobs in this country vs. that the jobs in this country immigration fills are those that will not customarily be done by people born here.

I wish I could say to you, "prove to me that there are people born here who will ______" and you fill in the blank. But that is both unrealistic and not constructive. So, the only mechanism I have by which to comment on the topic *is* from my experience. I even added enough honesty into the discussion to say that, neither now or when I *was* young enough to do it, would *I* do those jobs. And, as Jim/N2EY pointed out, *immigrant* farming is a whole other ballgame than just farming. Immigrant farming involves migrant lifestyles that few of us are even familiar with--let alone willing to do.

>
> Of course, I don't
> really expect Kim to answer those questions. Few seem to care about the
> Americans who are losing their jobs, or are seeing their wages reduced, as
a
> result of immigration and other government policies. They have their
> pro-immigration blinders on and refuse to see the obvious fallout of these
> government policies.
>

And, how dare you again, Dwight. You are being as overhanded with your remarks about my character, related to this conversation as anyone like Larry Roll would be--so don't even bother calling him on the carpet for his behavior!! How dare you imply that I "don't care" about bad policies in this country. Have I once said I don't care? Furthermore, the obvious fallout that you believe is not what I see--and I've just told you I am basing that on experience. Go to the Unemployment lines. I haven't--but I *BET* the majority of people in those lines are not looking for work on farms, at Wal-Mart, with municipalities, landscape companies, construction firms, asbestos abatement firms, chemical and biological hazard waste firms, and our ever-famous convenience stores such as 7-Eleven--all of which need people constantly. I reiterate *CONSTANTLY* because there is no one who will "take" those jobs--*EXCEPT* people who recognize them as a job to take when one is desperate. (An aside--if you want to break off into symantecs and argue about defining "no one," go debate with yourself, Dwight).

Those jobs, and so many more that I could think of, are *generally* not taken by people who have been born in this country. There are some who do--and they are in what used to be the ethnic miniorities. All one need do is look around them to see where our youth find important and meaningful employment: McDonald's and other fast food joints, light dining restaraunts, and that's about it. Why did I break-out to light dining restaraunts? Because I don't see teen-agers in the "finer" dining restaraunts--and my husband and I love to eat out so we have some experience. Know why *I* think they (teen-agers) aren't there? Because there, the customer service is higher scale, which demands more personality, better etiquette, and of course--greater work ethic. Guess who we do see serving us in those restaraunts?

My husband has been at his formerly family-owned business for 27 years. His mom sold the company last year. For most of those 27 years, until about 10 years ago, they had a great crew of folks. Since then, the main focus of my husband's every day work has been to get someone in there who wants a job and will work. Know how many nieces nephews, and his own kids and my son, he has had through those years? Ten. Not one of them has ever, ever worked there. Know how many great nieces and nephews he has had who, of course, have been old enough to work through those years? They are just now getting in to their early-mid teens. A quick count of those that could work there is somewhere around seven. Not one has ever done it. Oh, I take that back. My husband's daugher worked there--for literally four days.

For goodness sake, here's a great example: I am privvy to a situation where I know a kid of coworker's who had "no prospect" (yeah, right) of a job after completing a 2-year program with one of these "tech" type training institutions. So, she's back living with mummy and daddy and pining and sighing every day. I have a co-worker who is from India. He's brought his wife over here and she'd been here for about, oh, three months before they both learned of the medical transcritption service industry that's been popping up over the past few years. He has a problem with his wife going out in the workforce, but she wanted to work to contribute to the recovery of costs it took to get her here, etc. She went to a 6-week (I think it was) school to learn medical transcription, blah, blah, blah, she now has her own home-business with her family doctor as her first customer and she'll get more, I'm sure. We were all talking about this at work. He mentions this to this coworker whose kid has no prospect for a job. Know what the kid's response was? I think you do.

So, it isn't only you who has your own company, Dwight, whose livelihood is at stake with things such as they are. I'll come full circle with my indignation again: how dare you imply that I don't care.

>
> I look around and see many in my hometown (a small town) unemployed or
> working in low paying jobs while every factory in the area closes and
> immigrants move in to take jobs.
>

If the factories are closing, then what jobs are the immigrants moving in to take? And, have you any friends or casual acquaintances that you can ask if they have tried to get those jobs? I am still curious to know if factories are closing, what jobs are available for anyone to take? I take your comment above to be pretty dismal. I've been in dismal (the NE when the oil crisis happened--talk about getting dismal) and I had to move down here to make it.

>
> A friend, who has been doing lawn care for
> almost three decades, recently lost a long-standing contract to another
> out-of-state company using all immigrant employees. As a result, he filed
> for bankruptcy and had to fire his entire workforce - Americans who were
> willing to work.
>

Well, excuse me for the honesty--you'll call it having my blinders on or not caring, maybe even because I am a "liberal"--but, if one contract put this company out of business, then perhaps the person should have gone on to some form of vocational or higher level training in business practices before they took such a jump. I've had my own company too, years ago. And, if I'd had just one "large" job/contract, I would have been in a constant state of panic. And, as an aside, if this person's seeing other companies get the contracts...then go get a job with those companies as a Salesperson, or whatever. Maybe he/she *won't* make the money he's accustomed to--but we gotta do whatever it takes to make adjustments to the things we have no control over. And, if we have no control over the employment situation in

this country--we don't whine about it. We knuckle under, get the menial jobs, sell the big house, get the little house, sell the SUV and get the Saturn, and we begin the task of seeing what we can do--if anything--to change the route of what we perceive as being awful.

> I'm feeling the pressure right now. One of my companies (wetland
> maintenance) is facing competition from a company with almost all illegal
> immigrant employees.

Then, report the company to INS. REPORT THEM. If the company is getting contracts based on their employment of illegeal aliens, then I am sure the firms they are doing services for will want to know this. For goodness sake, REPORT their ass.

> I just barely held onto a county contract last time,
> but profits are now dismal. To hold onto that contract next time, either I
> cut my employee's wages sharply or I replace them with illegal immigrants.

Don't you dare buy in to the illegal and unethical side of this. To join is not to change or conquer.

> The only other option is to not even bid at all, which means the other
> company (with it's illegal immigrants) is assured the contract (and I let
> employees go).

And, if it illegal immigration that is nulling you out, you use the laws and shouting as loud as you can shout to fight it.

> The economy of this country is quickly heading to hell in a handbasket
and
> few seem to even notice or care.
>
> Dwight Stewart (W5NET)
>
> http://www.qsl.net/w5net/
>

I don't know who's not noticing or caring. I see a lot of doing nothing to get involved against it, or to even lift a finger of their own to change it.

Maybe that has more to do with the fact that Clinton was from the South and the flags were some form of "solidarity." You sure do see things from a weird perspective, in my opinion.

Perhaps it will be because the more Southern someone is, the more the Southerners feel more like they are being better represented? I mean, if we're going to come up with divisible concepts...let's make them good at least. Maybe the Norwegian Californians will start waving theirs.

It isn't everyone, Kim. I do agree that here in the US, that many people feel that some jobs are "too low class" for them. Educators (and many others in authority) have demeaned jobs they consider beneath dignity. I remember my high school principle personally taking me aside and telling me "Mike, you're a smart kid, why do you want to go to Vo-Tech?" I took the academic courses also, but he was worried about the "Tekker" image and what damage it could do to me. I was flattered for his concern and intervening in what should have been between my guidance counseler and myself, but I went to Vo-Tech anyhow.

But she has options! She can live with Mommy and Daddy and not work! I never considered that one of my options, so when I was young, I'd take whatever job would put food on the table. And that makes for a big difference in what job is demeaning, and what job isn't.

I do think. I think you are a bit of the same "unbalanced" you
allege others to be...

> > For an offense to have occured, it onl;y requires that it be
> > perceived as such.
>
> I perceive you to be an unbalanced person. See my numerous posting
> asking you to seek help. Again, please seek help.

Please list for us your credentials in psychiatry or other mental
health disciplines that qualify you to make such a request, Brain.

Reading Lennie's Mrs's books over his shoulder does not count.

> And I perceive an offense to have occured. You have threatened me in
> full capitalization.
>
> Additionally, you have misspelled the word, "onl;y," which according
> to your own rules of netiquette, you are in a rage.

Geeeze, Brain...There you go getting your attributions WRONG
again.

That's LENNIE'S assertion...not mine. I have only made a point
of pointing out LENNIE'S typos since that's HIS schtick.

Please try to get it right.

> You as a trained and experienced US Marine Gunnery Sargeant, I
> perceive those combinations of events to have placed me in a position
> of harm.

If anything has put you in a "position of harm", Brain, it's your
big mouth and childish behaviour. That I was a Gunenry Sergeant and
and I was trained means I know how and when to apply what I learned.

You obviously haven't.

> I fear you, and I pray that you do not own a firearm.

I do own a firearm, and there is nothing to fear. If you "fear"
me, it's only because you know you were stupid enough to make the
comments you made in the first place.

Dumb brain...dumb brain...

> > Personally, I think you were just pushing the limits of how
> > offensive you could be and still get away with it.
>
> What do you plan to do about it? I hope you don't kill me.

Kill you...?!?!?!

BBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HA
! ! !

You do have a grandiose over-appreciation of your self worth,
don't you..?!?!

> > It didn't work.
>
> It must have. I am in fear of my life.

OK, Mark...I mean Brain... ! ! !

> > > > Thre's no apology to offer, Brain.
>
> Another rageful misspelling. Geezus, is he going to hurt me? kill
> me?

Your attributions are STILL wrong, Brain...refer to Lennie for
the "typo-rage" syndrome.

> > > There should be. Why do you assume yourself to being above making
> > > mistakes, such as the one you made above?
> >
> > As I pointed out, in order for an offense to have occured, the
> > person only need have PERCEIVED that a threat was rendered.
>
> You have convinced me. I am afraid that you are going to hurt me.

If I "hurt" you, Brain, it will be in the pocket book.

> > I have warned you off, but you keep barrelling right on in.
>
> I beg of you not to hurt me or my family.

I reiterate my comments about your foolish behaviour.

You're being foolish again. If ANYTHING is going to "hurt" your
family, it's the embarrassment of knowing how you conduct yourself in
a public forum.

> > Were you born an idiot, or was this a life-long achievement?
>
> Oh, thank goodness. You are merely going to call me names and not do
> bodily harm to me or my family. I hope?

I guess you STILL can't answer a direct question, Brain.

> > > > I am TELLING you that ANY insinuation of use of firearms on MY
> > > > person IS a threat, and that it's the LAST thing you want to do.
> > >
> > > I am telling you that there was no insinuation except in your capacity
> > > to comprehend. And I still read a threat in your latest reply.
> >
> > No threat. A warning. A thrat implies a violent, illegal
> > response.
>
> Oh, damnit!!! Another mispelling. And a threat of doing something
> illegal!!!

Third misattribution, Brain. Go find Lennie!

> Are you going to assault me. Kill me? Kill my family???
>
> Stebe, you've crossed the line!

Well, Brain, all I can say is copy all the posts. I have. If
you insist, we can continue this in court.

> I tell you to back off. Apologize.

Apologize for what? Telling you that your insinuation of holding
a gun to my head was uncaled for?

I don't think so.

> Trust me, if you keep this up, the result will be anything
> > BUT illegal...And expensive I might add.
>
> Perhaps Extra-illegal? And funerals are so expensive. Thank goodness
> I have burial insurance and the government will provide a flag for my
> funeral.

Nope...quite LEGAL.

> > > Now move on to your apology.
> >

> your head. I refer you to the first reference, where I said I wasn't
> holding a gun to your head. I wonder why anxiety was present if for
> not some mental problem on your part.

Because what can I expect from a guy who makes "prideful" boasts
about being mentored by the likes of Lennie Anderson...?!?!

> Hopefully, you have no history of counseling that might suggest that
> you are an anxious person.

Anxious to not have to deal with irresponsible people? Who
isn't..?!?!

> Do you have a history of counseling?

Nope. Do you...?!?!

> > Otherwise I will assume your intent WAS to cause it, and I can
> > proceed accordingly if you insist.
>
> Your assumptions make for skunky gossip, nothing more. I suggest you
> refer to real life. There was no intent to cause you anxiousness.

Then YOU are apologizing for YOUR comments...???

> Are you a "naturally" anxious person?

No more so than anyone who is trying to make heads/tails from
USENET posts from a guy who admires a pathological liar, Brain.

> > > Now move on to your apology.
> >
> > What apology?
>
> The apology that I demand from you for putting me in fear of my life,
> from a trained Marine who has stated that he would do something
> violent and ILLEGAL (see above).

Sorry, Brain.

I said nothing about ANYthing illegal. I said nothing about
ANYthing "violent" You are welcomed to cite the VERBATIM comments
where I threatened you with bodily harm.

> That apology.

Since you're hung up on an "apology", here's one for you, but I
am sure it's not what you wanted:

I AM sorry that I have helped you perpetuate your foolishness in
these exchanges. I AM sorry that you do not seem to have the ability
to keep track of attributions by USENET "authors" (especially since it
was the same guy you admire so...) And I AM sorry that you seem to
have a hard time taking anyone else's feelings other than your own
into consideration.

How's that?

> > > > No, Brain...On THIS one I am sure.
> > >
> > > The fool is always so sure, especially when they're wrong.
> >
> > And in this case when he refuses to admit that he uttered words

>
> Yes, those threats that you've been uttering. Those mispelling that
> indicate that you're in a rage. The training that you've received in
> the US Marine Corps to kill people from faraway places. Your words
> about doing something violent and illegal!

Once again we have you making even MORE assertions about things
that are not true.

The "typo-rage" syndrome is Lennie's creation.

I have made no threats. I have warned you to stop any assertions
directed at me that involve firearms, or I may refer them for action.

I have never made ANY "threat" of violence or harm to you, save
via the recourses available to ANY citizen who feels they've been
wronged.

You ae AGAIN invited to cite any sentence where I "threatened"
you with bodily harm.

> Those perceptions that I hold based upon your very own words.
>
> ...all of those things that you've uttered that I perceive as
> life-threatening.

They are only "life-threatening" where your pocketbook is
concerned, Brain.

> > Which would be you...
> >
> > > Gunny, you need to move on to your apology.
> >
> > What apology?
>
> The apology that you are about to render.

Me thinks you jest too gladly in the shower, Sir Brain!

> I'll give you an out - an out that many a thousand soldier has taken.

>
> Nothing else.
>
> Absolutely no shame in it.
>
> Be a good soldier and get on with it.

Whatever "apology" I rendered above is all you get, Brain.

Sorry if it's not what you wanted, but it's all you get.

AIKEN, SOUTH CAROLINA -- David Vine, WA1EAW, has compiled a comprehensive and highly organized Adobe Acrobat format library of information and data in the fields of Emergency Communications, Natural Disasters, Emergency Planning and Search and Rescue on four CD-ROMs. Emergency services executives, operations personnel, volunteers and others interested in these subjects can instantly access this critical reference information anywhere, at any time, using a laptop computer.

CD-ROM 1 Communications contains 121 documents/5804 pages.
CD-ROM 2 Natural Disasters contains 88 documents/4536 pages.
CD-ROM 3 Planning contains 83 documents/pages.
CD-ROM 4 Search & Rescue contains 97 documents/6627 pages.

Individual CD-ROMs cost $19.95 and the complete set of four costs $54.95 plus shipping. Quantity pricing and site licenses are available. Credit card orders may be placed by calling 800-987-8743. A complete list of files on the four CD-ROMS can be obtained by sending a stamped, self-addressed envelope to David Vine Associates, LLC at 963 Dougherty Road, Aiken, SC 29803.

The flag of the confederacy is NOT the battle flag being displayed as the
flag of the Confederacy.

When the Tennessee Battle Flag is flown in the South, by real Southerners,
it is meant as a sign of respect for the fallen and a symbol of STATES
RIGHTS.

No one advocates seccession from the Union, or starting another war.

But....we get real tired of Northerners and blacks trying to tear the flag
down, especially since the reason they want to tear it down is they believe
it is a racist symbol.

If it IS a racist symbol to them. Then they have fallen for the big lie.
Govern yourself accordingly.

It is a part of everyday life, because it is in the interest of people like
Jesse Jackson, Sharpton, etc. to KEEP IT in everyday life. If the
'racism' issue was let to die a natural death, it would go away. As it
is....it is being pushed down everyones throat.

Most northerners I know that have crossed the Mason Dixon line and stayed in
the South for a period of time have 'adopted' their new surroundings. With
one major exception....those from NY.

Wonder why that is?

That is one of the main reasons I left South Florida. Bunches of New Yorkers bringing all their bad habits with them.

When I decided to stay here I was told by a good friend to do two things;

1. Pick a football team.

2. Don't try and change a thing.

Good advice.....Roll Tide.

Ask the blacks, they are the ones leaving claiming more racism in the
North than the South.

Organized, long term freebanders are very aware where they
operate and take great measure to ensure against talking on an amateur f
requency or one that isn't heavily used on the freeband.
If the non-U.S. stations can operate ssb there, why shouldn't I,
especially if I want to have a nice DX contact with one of them?

Many of us LIKE the law as it is, it keeps "yes men" off the freqs. Same
analogy as the gun issue...when guns are outlawed only
outlaws will have guns...no, yoo won't find many freebanders lobbying fo
r change to open the freqs because the law as it reads, doesn't bug us.

No rationalization is even needed except to reply to folks
that repeatedly ask over and over, "Why?" It is these folks
that feel they need a reason why we do what we do, not us.

Ancient liberal press trick of assigning reasons for something to
something else.

My read:
1. Earlier, a lot of Black people moved north for jobs.

2. Jobs go away, and next generation is better educated.

3. People move to where they can get a job.

The closest thing to a quote from an actual person who MOved south and
said this is why they moved south was from some dude in the urban
league. I hesitate to draw the same conclusions. YMMV

No thanks to a certain "radio engineering professional" who TRIED
to lobby the FCC into setting one despite 80+ years of successful and
productive licensure of children.

> Well, if you are "married" to your hobby, I'm sure you would be
> insulted one way or the other by allowing others to intrude on
> your very private domain.

But why should THAT matter to YOU, Lennie...?!?! You've
certainly made no bones about invading the "private domain" of others
for decades with no intention of using the front door.

> > >"Morse will probably retain most of it’s exclusive band segments, at

And the only two "CW exclusive" segments are at 6 and 2 meters.
Funny how all the No Code proponents holler about how CW is employed
on HF, a part of the spectrum they have no privileges, yet there's not
been ONE attempt to have those two segements on 6 and 2 "re-farmed".

> You tell us, mighty keeper of the private domain that only belongs
> to old-values, anal retentive long-timers.

Nice example of "civil debate", Lennster.

>
> Tsk, tsk, tsk...how dare those 20 WPM code-tested Extras
> insult all you Extra-Lites, right?

Why insult "Extra-lites", who have passed the PRESENT licensure
structure to get there, when we have an UNlicensed creep like you to
kick around, Putzmaster?

> Have you been in another universe for a decade? In HERE, there
> was a MIGHTY HUE & CRY about age restrictions proposed by
> someone in 1999! CAN'T HAVE THAT!!!! cried the multitude!

No, we can't.

The system has worked well the way it's been for 80
years...Unless YOU know of some secret government plot to hide all
those pre-pubescent offenders from us?

> If a 6-year-old can pass an Extra exam, they are QUALIFIED!
> That's been said by the multitude in here, too.

Duuuuuh....Maybe because it's TRUE, Lennie...?!?!

Really rubs your hide to know there are pre-teens with more
access to the electromagnetic spectrum than you, Eh, "Mr. Radio
Professional"...?!?!

Maybe we can get one of them to let you on the air...but
remember, THEY will be supervising YOU, so BE-HAVE!

> 159-year-old morse code hasn't "turned on" many new folks...

And you know this from WHAT practical experience in the Amateur
Radio Service, Lennie?

> Why don't you go argue with Broose, the "Extra-Lite CB-plusser?"

As much as it chaps MY hide to say it, at least Bruce TOOK the
test, Lennie...

You have WHAT class of AMATEUR license...?!?!

Steve, K4YZ

2103. Double Licenses?

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-02 20:59:14 UTC
From: "Ben K." <klausner@net.frijoles>
Message-ID: <Ceepb.239616$Of.35041@news.easynews.com>
Source record: 81579

I finally went and did the paperwork to change my 1975 Technician + code license into a General ticket. I took the Extra written at the same time, with no expectation of really passing it on the first try.

But when I got the response from the FCC, there was a surprise. Two envelopes, each with an identical copy of a General license in my name! Additionally, the expiration date on both is March next year.

Doesn't paying the fee and having new paperwork generated result in a license renewal?

And why does this not surprise me? From a licensed ham, that is supposed to know the rules and regs. I rest my case.

Go ahead and rant and rave....you know you are wrong.

Better yet WWV, go ahead and operate there.

I've been a so-called "freebander" since the late sixties but rarely for DX. The primary reason I talked outside of allotted frequencies was for privacy or to contact a specific distant station I wouldn't normally hear on the allotted band. We used to run Ch. 16 -5khz down and 15A a RC Channel running slightly above stock power on 3-4 element directional and easily talk 75-100 miles. I spoke all over the world with better than 1000 confirmed QSL contacts from a slightly peaked Golden Eagle Mark III/IV running through a 4 beam element at 60 feet from Central NJ.

No. Several years ago the FCC changed the way they handled all such
changes.
Your license expires on the day it was renewed plus 10 years. Interim
changes to the license (upgrades, address changes, vanity requests, etc)
do not change the expiration date.

Cheers,
Bill K2UNK

>kidding (I think). ;-)

The "fill up the West" thing was a 19th century idea. Of course the West was already full of Native Americans, but that didn't faze a lot of people who weren't Native Americans.

By about the 1880s the West was considered "closed" by the government - not fully settled, but not a frontier anymore.

>the areas you describe, will have to be taken to insure a lasting solution
>instead of a quick fix that falls apart in a few months.

It will take years. There will be mistajes made in the process. But a better system can result, for both those who live here and those who want to immigrate.

>Sadly, we don't
>seem to have any long term plans in this country - a game plan that
>stretches out beyond just the next year or so.

And that's the *real* problem, when you get to the bottom of it. What's the long term plan for US involvement in places like the Balkans and Afghanistan (let alone Iraq)?

>Bush is gearing up for next
>year's election, but what about the month or year after that election? What
>about ten years from now?

Heck, most of the problems we have today are the result of not looking down the road at where decisions will take us.

Every so often in here, the "Amish" are cited as being "against technology" or "forbidding change" or some such nonsense. Actually the *real* Amish (at least the ones I've met) aren't like that at all. What they are really all about is looking at the effects of change in great detail before making changes. Some people might say they take the examination to an extreme. But at least they examine where a change will take them. To a very large extent, "modern" America doesn't do that.

They made some kind of mistake there.

>Additionally, the expiration date on both is March next year.

I assume that's the same as it would have been if you'd done nothing.
>
>Doesn't paying the fee and having new paperwork generated result in a
>license renewal?

It used to, but not any more!

It's my understanding that FCC renews for only three reasons:

1) A license is going to expire within 90 days,

2) A license has expired but is within the 2 year "grace period"

3) A new vanity call has been issued.

When you changed license classes, FCC considered that a "modification", just
like an address change. Unless you also met one of the three criteria above,
you don't get a renewal

I know, it would cut down paperwork if they renewed for each modification, but
that would get sticky with the vanity call fee things...

Note that the fee you paid wasn't for the license itself - it was to reimburse
the VEs and the VECs for their expenses.

The good news in all this is that when your license gets within the 90 day
window, you can just fill in a form and mail it in, or renew online. No fee, no
visit to a VE session.

If you passed the Extra written but didn't get the license papers, a letter to
the FCC may be in order. But first check the database to see what license class
FCC has assigned to you.

There's a big difference here, Buckaroo, and that is firearms are
LEGAL in most places in the United States.

The ILLEGAL use of a firearm is a felony.

Your operating of a radio transmitter on unauthorized frequencies
is ILLEGAL...PERIOD. It's NOT a "freedom" thing.

> No rationalization is even needed except to reply to folks
> that repeatedly ask over and over, "Why?" It is these folks
> that feel they need a reason why we do what we do, not us.

You're right..."...No rationalization is even needed..." It's
against the law for good reasons, the most significant being that you
have "stolen" those frequencies from other users of the spectrum who
are now forced to do thier business else where. That's expensive, and
sometimes it's dangerous.

If it were limited to 11 meters, it probably wouldn't be an
issue, but the "freebander blight" is spreading out to the Maritime
frequencies, both HF and VHF, military frequencies, and other business
users, among others.

I am persoanlly aware of numerous "interruptions" of traffic due
to some ignoramus trying to "break in" for a "signal report" on
military frequencies and Civil Air Patrol's frequencies.

Don't wrap yourself up in that "free spirit" crap. You're
breaking the law and disrupting the use of the spectrum.

I guess you failed to read this part, or you just ignored it because it
did not fit with what you want to believe.

"That movement north slowed as job opportunities dwindled and *racial
tensions rose* in northern cities in the 1960s and 1970s, Ross said."

I will probably be dropped soon, but the FCC has to go through standard
procedures with all the pending petitions. The international requirement
was dropped on July 5th, so by next July it should probably be gone in the
US.

The frequencies that the US govt. says you can are those specific
frequencies that constitute the 40 standard CB channels. The distance away
from the center of any channel is tightly regulated, and you can't be more
than 0.005% away from that center (~1.3 KHz), which is actually pretty broad
when compared to say, broadcast AM, which is only allowed a 20 Hz leeway).

> better yet, who the hell is the u.s. gov to tell me what is legal or
> not?

If you are a US citizen, they are granted that right by the constitution,
and by treaty.

if i were to float out to bermuda and xmit would i be freebanding
> there?

You would then be under the jurisdiction of whatever radio authority covers
Bermuda. Aren't they a British colony? The UK Radio Authority is much more
harsh than the FCC.

do our friends to the north and south really care what the fcc
> says what americans can/cannot do? not likely....

Actually, yes. The treaties for use of various frequencies are there to
protect all the various countries that are signatories to them. The
Canadians are pretty hard on pirates (though they also have some rules in
place to give greater latitude on some bands than we do). I don't know what
communications law is like in Mexico, but I imagine that they deal with
people operating out of band/off channel too.

There are international treaties also that regulate such things. So just
floating out to Bermuda doesn't help.

treaties not withstanding have you heard 10 & 11 meters recently? the
developing world is looking for the cheapest way to communicate with
their expatriates (sp?) in the u.s. one way to do it is using a setup
that after an initial outlay for equipment is basically free. their
problem is propagation not the gov.

You guys were burning up the bands from what I heard here. Sorry I didn't recognize the K0RT call at first. Dan has given me 'Bama in SS for so many years that I felt kinda disloyal working another AL first.

Lotta good signals, flares didn't do too much damage.. Towards the end I was hearing serials above 1300.

I put in 15-16 hours and got 367 QSOs in 74 sections. Gave the K2 a rest and used my homebrew rig (known as the 'Southgate Type 7' this year.

Boy was that fun. I gotta get in better shape for next year, though, I faded by 2 AM local.

Maybe I'll build an amplifier for the K2...lessee, single 811 in grounded cathode Class B, full wave bridge power supply with old TV transformer. Or perhaps it's time for me to dsign and build the 'Southgate Type 8'.

No!

I'm saying that some of the proposal's ideas (not talking about the code test -
that's old news!) are not the best way to reach the desired results.

My point is that if the govt. grants licenses that require tests, it makes
sense that the rules for that license be on the test.

Consider this:

Prospective ham reads about the upcoming changes. Reads that on Date X, all Techs will get free upgrade to General. Crams for Tech and takes it a day or two before Date X. Passes Tech, gets General as a freebie. Is that fair? Does said newbie really have General class qualifications?

But that wasn't the issue - ARRL proposed 5 wpm for General, so all Tech Pluses
and Novices met that already. The sticking point was the written testing.

The "no voltages over 30" means no line-powered rigs, no antenna tuners.....

Remember the old saying "can't means won't"?
>
To my knowledge, no 6 year old has passed the Extra.

A 6 year old being homeschooled at the first-grade level passed the General
recently.

Several years back, befoe restructuring, an 8 year old in 3rd grade passed the
Extra - all 5 written tests and 20 wpm code. I have worked that amateur a few
times on CW - excellent operator.

And this isn't a new phenomenon. Way back in 1948, before there was a Novice or
Technician level license, a 9 year old passed the old Class B exam at the
Philadelphia FCC office. That exam required 13 wpm receiving and sending, plus
a written test that was not from a public pool that required essay-type answers
as well as multiple choice, and the drawing of schematic and block diagrams.

On the last page of his voluminous reply comments to the restructuring NPRM
back in 1999, Len requested that the FCC enact a minimum age requirement of 14
years for any class of amateur license. When challenged, however, he could not
give a single example of on-air violations by licensed radio amateurs under the
age of 14.

I don't really know any Blacks that are moving south. Does that make me
unqualified to have an opinion? If so, how many do you know?

If they moved to the north because they were told that there was no
racism there, then that information was wrong by your reasoning. So why
is this news blurb the truth?

> As usual, if your views agree with the press then the press is
> correct, if not then the press is wrong.

As usual? Don't know where you got that from me, I hardly ever comment
on the press.

If you want to know what I think of the press, I simply use what seems to be facts from them, and toss out the "conclusions" they make. That's why I listen to CNN, Fox, whatever major network happens to be on at the time, and even NPR. Guess what? they are all biased, and put their own spin on the news! My biggest disappointment in the whole batch is Fox news tho'. I don't mind a right wing slant to the news - indeed it is nice to balance out some of the others - but as of late, they seem to be taking the tack of sueing or threatening to sue people who disagree with them or satirize them. Like Mr. Franken, or amazingly enough, the Simpson's!!!!!! Seems they have a problem with free speech.

So if you want to believe whatever pabulum is served up by one new source, have at it! I'll make up my own mind.

I don't deny they got a few parts right.

Hey, you want a theory?

How about an effort made to get African Americans (traditionally Democrat)to move back to the south to balance out the political leanings of the area? We might be able to get some "authority" to say something like that.

> (snip) But, how dare you dismiss the experiences I have
> seen.

Again, I'm not dismissing your experiences. Instead, I'm questioning the conclusions you've made about those experiences. You say, based on your experiences with other people, nobody in this country other than immigrants is willing to do those jobs? How many of those non-immigrant people did you ask if they would take those jobs if the wages were better? I suspect just about all of them would at least consider, and many would gladly take, those jobs under different wage conditions. If I'm right, your conclusions are flat wrong - non-immigrants are willing to do those jobs. And, if you are wrong, to continue to perpetrate a myth that non-immigrants are either too lazy or too uppish to do that work is simply insulting.

> And, how dare you again, Dwight. (snip) How dare you
> imply that I "don't care" about bad policies in this country.
> Have I once said I don't care? (snip)

Lay off the false outrage, Kim. Nobody said you didn't care. I said "few seem to care," not "Kim doesn't care." If you apply those words to yourself, you do so in your own mind. If others want to apply those words to you, they'll do so after reading what you've said.

> (snip) and I've just told you I am basing that on experience. Go

> Wal-Mart, with municipalities, landscape companies, construction
> firms, asbestos abatement firms, chemical and biological hazard
> waste firms, and our ever-famous convenience stores such as
> 7-Eleven--all of which need people constantly.

Your experiences are clearly somewhat limited. Walmart doesn't hire through state or outside employment agencies. Potential employees apply at the individual stores and there are rarely shortages of applicants. Municipalities tend to pay fairly well (with good benefits), hence rarely have a shortage of applicants (skilled applicants is another matter). Landscape companies, to keep costs down, are perhaps the largest employers of illegal immigrants. Construction companies only have problems finding skilled applicants (laborers are plentiful). The same with most other companies seeking skilled labor. Convenience store jobs are among the lowest paying, and most dangerous, in the country. In other words, none of these

tend to prove your point.

> (snip) All one need do is look around them to see where our
> youth find important and meaningful employment: McDonald's
> and other fast food joints, light dining restaurants, and that's
> about it. (snip)

You've got to be kidding, Kim. You consider employment at fast food joints, some of the lowest paying jobs in this country, to be "important and meaningful employment?"

> (snip) Why did I break-out to light dining restaurants? Because
> I don't see teen-agers in the "finer" dining restaraunts - and my

> Know why *I* think they (teen-agers) aren't there? Because
> there, the customer service is higher scale, which demands more
> personality, better etiquette, and of course--greater work ethic.

Or maybe the owners simply don't hire teenagers.

> Guess who we do see serving us in those restaurants?

Who, Kim? You've already said teenagers (immigrant and non-immigrant) don't work in these restaurants. That leaves only adults. I suppose you're now going to say immigrant adults have more personally, better etiquette, and a greater work ethic, than non-immigrant adults in this country, which is why immigrant adults, not non-immigrant adults, work in the restaurants you go to.

> My husband has been at his formerly family-owned business

> his own kids and my son, he has had through those years?
> Ten. Not one of them has ever, ever worked there. (snip)

Perhaps that says more about your husband than the nieces, nephews, and kids. That's not intended as an insult. Instead, it's just to point out that few kids are willing to work for parents or immediate relatives - parents and relatives tend to be more demanding and more judgmental than the normal employer.

> If the factories are closing, then what jobs are the immigrants
> moving in to take? (snip) I am still curious to know if factories
> are closing, what jobs are available for anyone to take? (snip)

Didn't I pretty much answer that in the next paragraph of that message? There are obviously more jobs in town than just factory jobs, Kim. The elimination of those factory jobs simply adds to the competition for those remaining jobs.

> Well, excuse me for the honesty--you'll call it having my

It happened to be about a $450k per year contract, the loss of which his company could not absorb.

> (snip) if we have no control over the employment

> anything--to change the route of what we perceive as
> being awful. (snip)

Kim, as voters and citizens, we're supposed to have control over the employment situation in this country. We don't simply because too many choose to "knuckle under" instead of demanding better. Of course, they probably don't have that much of a choice as long as most people are heartless enough to think the solution for those people is to sell everything, take a menial job, and live in poverty.

> Then, report the company to INS. REPORT THEM. If
> the company is getting contracts based on their employment
> of illegeal aliens, then I am sure the firms they are doing
> services for will want to know this. For goodness sake,
> REPORT their ass.

I've already filed complaints. Sadly, it just doesn't work that way, Kim. When it comes to businesses hiring illegal immigrants, government agencies only take on a few, high profile, cases each year (such as Walmart recently). Because of that, you could complain until you're blue in the face and absolutely nothing will come of it. I truly wish it were different, but that's simply the way it is (which is exactly why so many companies are now willing to hire illegal immigrants).

n2ey@aol.com (N2EY) wrote

> You guys were burning up the bands from what I heard here.

Conditions were pretty rough here. With the high A-index (100+), then an early AM solar flare creaming us, conditions seemed to be a bastard mix of "peak of the solar cycle" but modified by high absorption. The higher bands (10 & 15) were extremely long, so we sat here in the middle while the east coast worked the west coast with big signals and we could barely tell they were on the band. Unless you were south of about 43-degrees latitude, you also had to contend with the expanded auroral zone and resulting tough conditions on the lower bands, especially 75M. The result is that around here we were in a propagation black hole, and pretty much were squeezed into 20 and 40M bands. Most MWA scores look to be down about 20%.

Rules are made to be broken, even the Rain Report can't stop me!

http://groups.google.com/groups?q=n8wwm+%22rain+report%22&hl=en&lr=&ie=UTF-8&oe=UTF-8&selm=dc1baa4a.0302200920.2171992a%40posting.google.com&rnum=8

N8WWM guilty of FCC violations. According to the FCC, N8WWM, Dog Adair committed several violations over the air at the expense of the Toledo Amateur Radio Club by utilizing their repeater to break the law. The amateur club received a warning letter from the FCC concerning Adair's violations and were told to take steps to make certain the violations by Adair will not be repeated. Adair not only hurt the entire image of amateur radio with his inexcusable behavior, but damaged the reputation of yet another entity trying to further the good of amateur radio. It's a shame when bad apples like these make it so clubs can't even trust their own users to abide by the rules they were sworn to uphold. Adair is also an infamous presence on the internet. A google search of "N8WWM" reveals a peek into the world of the individual identified as Adair. In addition to FCC violations, Adair has, in the past, been accused of being a prolific spammer, breaking several internet laws and violating several terms of service agreements with internet providers.

There is no other possible way to interpret your comments. You're arguing against what you call "economic manipulation," which means you want no change from what exists now.

> Let's try again: The kind of economic manipulation that
> you are advocating has been tried many, many times,
> with consistently poor results. It is not "new" and further

> has been tried extensively already. - Again; With
> consistently poor results. (snip)

It's easy to make rash statements when you offer nothing to support them. Where have the changes I've advocated been tried many times and in what way have the results been poor? The key words there "the changes I've advocated," not your fanciful interpretation of what I've advocated.

> This may point out where some of our economic woes
> may originate.... Are all people who advocate

The frontier just kept moving, right up to the late 50's and early 60's
with the push for workers to Alaska.

> Look up what happened to refugees on the ship "St Louis"
> (I think that was the name) trying to escape Germany in

I'm in a rush today, so don't have time to look it up right now, Jim.
However, I'll guess that you're talking about the shipload of mostly Jews
which headed for Cuba somewhere around that time with the intent to
eventually enter the United States but were later turned away. If I remember
correctly, they docked in Cuba for several months and eventually returned to
Europe.

> And that's the *real* problem, when you get to the bottom

> like the Balkans and Afghanistan (let alone Iraq)?

Yep, we often get ourselves into things and only think about how to get
out afterwards. We also tend to do things in spurts, in sometimes seemingly
opposite directions. If businesses were run like this, most would be
bankrupt in very short order.

My wife lived next to an Amish community in Northern Indiana as a young
girl and went to an Amish school with the Amish children. She still speaks
fondly of those times (including the minor conflicts caused by the different
lifestyles).

I have a weird perspective, Kim? I seriously doubt any person other than you would have even come up with the notion that those flags might have been displayed in an effort to demonstrate some form of solidarity with Bill Clinton. Are your strange notions caused by a general lack of knowledge, an inability to reconcile your liberal values with your surroundings in Texas, some form of childhood trauma, or is your brain simply wired differently than most? ;-)

Lets not forget those from New Jersey. Many of them tend to be strangest, and most negative, of the whole bunch. There was one a few months back that sat on the radio every single night for at least two months telling anyone who would listen how much he disliked the people here, how much they disliked him, how nobody would hire him (all this while he was at work), and just how unhappy he was in general. I finally got fed up one night and told him he should either just kill himself or go back to New Jersey if he was really that darn miserable. Whatever I said must have worked because I never heard him on the radio again and was told a few days later that he had indeed moved back to New Jersey. However, as depressing as he was, he probably did kill himself shortly after arriving there.

The trend of blacks moving to the South has been covered in the news for many years.

> Here, the topic is a part of every-day life.

Exactly. More people here talk about race issues (all sides) openly and honestly instead of sweeping them under the rug like they doesn't exist (or trying to act like they don't exist). A friend (a reggie recording artist) and his wife just moved here from NY about four years ago. There isn't a week that goes by that we don't discuss, or even argue out, some racial issue or topic. I think we've both learned a lot from each other through this process. Regardless, the conversations are rarely boring and we've all become good friends over the last few years.

About 11.30 central a flare glanced off the Earth (Sunday). The whole band
(s) died. But not for long..

I put in about 12 hours. Got a bit over 500 qso's and missed SFL, YT,
Alaska, North Dakota, oh well. Can't have a clean sweep every year.

Good hearing you two. Sorry I missed the rest of ya.

But "the West" was pretty much full. And immigrants didn't usually go
to Alaska.

The Michener book "Hawaii" deals with the same situation in the
islands.

I can imagine....

Point is, the attitudes that newer is always better and that all
change is good have led to all sorts of problems.

<w4nti@get rid of this mindspring.com> writes:

>The flag of the confederacy is NOT the battle flag being displayed as the
>flag of the Confederacy.
>
>When the Tennessee Battle Flag is flown in the South, by real Southerners,
>it is meant as a sign of respect for the fallen and a symbol of STATES
>RIGHTS.

Dan:

When you "real Southerners" fly your Tennessee Battle Flag or whatever
you call it, everyone who isn't a "real Southerner" views it as waving a
banner of racism under their noses. Whether it is right or not, and whether
you like it or not, your flag is a problem for the rest of the country --
especially American Negroes (the proper term for black people in America --
considering the fact that none of them was born in Africa or ever lived
in any African country long enough to gain citizenship there). The white
"real Southern" rednecks with the "Tennessee Battle Flag" on their pickup
trucks are living in the past, at the expense of modern race relations.

>No one advocates seccession from the Union, or starting another war.

That's comforting.

>But....we get real tired of Northerners and blacks trying to tear the flag
>down, especially since the reason they want to tear it down is they believe
>it is a racist symbol.

While I was in the military, I had the saying "perception is reality" drummed
into me. The way we present ourselves to others forms their opinion of us
from the very start. In most cases, that's the only opinion they ever use to
judge us from that point onward. I think it's time for you and your fellow
"real Southerners" to face the fact that your flag needs to be taken off
your flagpoles and replaced with the real American flag -- the Stars and
Stripes. No one is questioning the fact that the South is part of the United
States, and it's time for the "real Southerners" to stop fighting the Civil War
and living in peace with the rest of their country.

>If it IS a racist symbol to them. Then they have fallen for the big lie.

One man's lie is another man's truth. If I were you, I'd concentrate on
making sure no one mistook me for a real American. Being a "real
Southerner" only leaves the impression that you don't feel as though
you belong to the greater whole of our nation.

>Govern yourself accordingly.

I do -- and I'm not the one flying any sort of state-specific "battle flag." I fly the flag of the UNITED States. One of the stars on the field of that flag belongs to Tennessee -- a beautiful state filled with free, united, and loyal Americans -- of all races, ethnic, and religious groups. They are my fellow American citizens, and I expect them to view me as one of theirs. I am living in the unified present-day reality of America -- not in the divided, suspicious, and hateful past. I invite you, my fellow American, to do likewise.

WHO mised the point? The reply was that SOMEONE has to pay for the
extra service, one way or the other.

I was in on those discussions in the 1990s. Were you?

Do you have a better alternative that won't cost money? Do you
expect the League to eat the extra cost just because you live
halfway around the world? When I worked in the Middle East my QSTs
came by slow boat - literally - some 6 weeks later unless I wanted
them sent by air mail at my expense (which I did).

read the section you mentioned at the cornell website. it pertains to
the u.s. and its environs but no mention of people outside territorial
limits.
the world is a bigger place then what the u.s. dictates....

This is so, but you asked specifically what right the US government had to set regulations, it was stated that if you were a US citizen, it was granted by the Constitution, and by treaty.

Further, the ITU does have worldwide jurisdiction, and they are the ones who write the treaties, and every country is a signatory.

I agree, but I don't much worry about memorizing band edges which
I believe should be readily available in anyone's shack. If you asked me
where the phne segment starts on 15 meters I have no idea,
but I can and would look it up before operatng phone on 15.
Even the band edges change over time as we saw with 80M novice
segment some years back.

Is it fair? Depends on your outlook. As to qualifications, I have
said all along that most license privileges bear little or no
relavence to what the license tests for.

But then there's enforcement, etc. What you are
actually saying now is that an Advanced can operate as an Extra today and
never
expect to be called to task for operating in the Extra segments.

> and Novices met that already. The sticking point was the written testing.

My point is that what was decided could or could not change. It
depends on the end goal and the FCC's considerations.

tuners.....

Most folks use a 12 volt DC supply anyhow. Interesting point, however,
since anyone (ham/nonham) is allowed today to build there
own DC supply powered from 120 v AC. Perhaps the NO homebrew
would be limited to transmitters only.

Cheers,
Bill K2UNK

Realistic? Surreal-istic is more like it!

This is the same mantra sung by NCI's ex Executive Director,
W5YI, and his fingerprints are all over this thing. He has
stated publicly that he feels that since people
who acquire entry level ham tickets invariably purchase their
equipment assembled these days, and send them in for
repairs when broken, they no longer need to possess the
knowledge needed to build good "home-brew" stations, nor
the knowledge to determine if their repairs/adjustments result
in proper on-the-air signals. Because of this fact, he thinks that
the majority of questions regarding math and theory (knowledge
mainly needed to build/repair/adjust equipment) should
be removed from entry level tests, and simply replaced with
questions on operating technique and regulations. If he had
his way, math and theory questions would only be part of
Amateur Extra examinations.

While I can't remember the last "fully homebrew" shack I saw (probably KG6AIG
back in the 60's, and even Luis had *some* commercial test equipment items lying
about), it is extremely uncommon to find a shack where every item is commercial
(or in it's original commercial state.) Homebrewing and modification to
commercial designs is especially alive and well in the QRP, contesting,
satelite, and microwave communities.

The QCAO (Quarter Century Appliance Operators club) and ASSOOBA (Amalgamated
Simple Shacks On Our Belt Association) would love it, but this idea would put
our service on an immediate slide into nothing more than another consumer
orientated Family Radio Service, and the consequent abolishment of Amateur
Radio.

The *single* unique element which differentiates our service from all the other
radio services is our authority to experiment, build, modify, and generally
tinker around and operate equipment which is not type accepted. The "technical"
aspect of our hobby comprises 3 of the 5 reasons (paragraph 97.1) for the
existence of the ARS, and removal of this requirement for licensing would tear
the heart and soul out of the hobby.

If amateurs were to be licensed without any requirement for electronics knowledge, then it follows that type acceptance of all amateur equipment would be a requirement for sale. Used equipment, if sold to "no-Tech" amateurs would need to be recertified and "mod-free", and repairs could only be accomplished by FCC-approved service facilities. The cost of new equipment would rise to commercial-service price levels, because of type-acceptance issues, and most vendors would probably leave the market.

Sorry, but you guys are out to lunch with this cockeyed notion.

Code-Free, then Tech-Free .... what next, license free? CU on eleven, good buddy.

It's a difficult question. Do we applaud him for wanting to go legal? Or
do we slam him for ever having operated illegally? I have known former
pirate radio ooperators whose behaviour on the ham bands after they got a
licence was exemplary.

I am gonna stab myself in the foot for this one before any of you all want to, but what I think Lennie is trying to get at, is that nowhere in the media has amateur radio taken any form of the spotlight on this event. I was sick for the past six or seven days and spent alot of time home watching tv between resting. Nowhere did I see anything mentioned about ham radio.

On a positive note, this would have been a great example of showing how valuable ham radio is supposed to be. It wouldn't cost the arrl much to send press releases of this to the major networks, Hell, I chip in for the stamps if that is the case!!!!!! Remember, a good defense is a good offense! (re: arrl claims to "defend" amateur radio)

This is one of those one in a million times I would even vaguely come close to agreeing with Lennie the License-less. I think I am gonna have nightmares now!

Well, my mistake to think it was something like a high school or grade school.

If it indeed jepardized safety, maybe it would be an issue, as hospitals ban them (cell and other transcievers...) but if it is interfering with something else, especially part 15 devices, I don't think they would have alot of ground to stand on.... merely opinion though.

But its perfectly okay to pay some union bum a ton of wages for doing a repetitive task, (a skill that same 14 y.o. that passed a ham test could do) therefore jacking the cost of a product, lets say a car for this example, to a ridiculous price??? (actually both the fast food worker and the person on the line at the factory ARE BOTH doing repetitive tasks....)

Believe it or not, there are alot more people out there trying to survive on the poverty level wages. Based strictly on my local region, that would be any job under 9-10 dollars per hour before taxes and if any, benefits. And unfortunately some of these people are NOT counted, in the unemployment or other job related statistics, if they are not participating in the various government programs like the employment security commision that Michigan has... (think its called MichiganWorks)

If they have already been punished in some way by the courts, then the
answer to your query is (or should be) yes. If they have not been punished
in some way by the courts, then, de facto, they have not been found guilty
of any crime, and are to be presumed innocent.

Then, you lay off the analogy of my being wrong and not caring, Dwight.
You'd be as affected if I responded to a post by you saying that, "seems
like everyone is on the _______ bandwagon." You would--and rightly so--make
the connection that I was including you as one of those "everyones." Also,
it is not false outrage--once again you dismiss someone else's attitude.

You know what, Dwight? You're right. And, you know what else? I have
told you that I don't know how many times now. I have clearly, clearly
told you from whence I am basing my opinons. DUH!!!!!!!!!! And, you what
else? SO ARE YOURS.

>
> Walmart doesn't hire
> through state or outside employment agencies. Potential employees apply at
> the individual stores and there are rarely shortages of applicants.
>

The phucking point is, Dwight, that people of whom you and I are
speaking--those that say they cannot find work, are not "looking" (i.e.,
going to take, consider, or toy with) the idea of employment at places like
Wal-Mart, etc.

>
> Municipalities tend to pay fairly well (with good benefits), hence rarely
> have a shortage of applicants (skilled applicants is another matter).
>

They have high turn-around, Dwight. Why? Because the work the ask folks to
do is generally considered to be far more work than many are willing to

do--even including police and fire work. And, even with the high turnaround--again--the people of generally US-born heritage do not look for or even consider work in those fields.

>
> Landscape companies, to keep costs down, are perhaps the largest employers

> skilled applicants (laborers are plentiful). The same with most other
> companies seeking skilled labor. Convenience store jobs are among the
lowest
> paying, and most dangerous, in the country. In other words, none of these
> tend to prove your point.
>

You are talking in circles, and ignoring good points I might add. My point is this: REGARDLESS of the reasons you list above, the FACT still remains that people who are in a non-immigrant class and generally US-born who you say are displaced by immigrants filling the jobs, will *not* generally look for or do the jobs listed above--and more. Whether you wish to believe that or not--whatever. I've heard it expressed, I've known people who feel that way, I've listened to it being discussed in public venues, and I've watched my own Congress debate the problems associated with it.

For a phucking youth?????!!!!! Yes, I do, Dwight. The jobs filled at places like that build the background it takes to be a half-way decent employee as a young and professional adult.

>

Yep, that's exactly what I'm saying. And, just for you and Jim I'll say
this: some.

>
> > My husband has been at his formerly family-owned business

Give a dog a bone and he buries it.

OK, then, Dwight. Explain why in those years not only have the
nieces/nephews and great-nieces/nephews not worked there--in a time of our
country that unemployment is at the high it is, he (my husband) is begging
for employees? And, it happens that he is *always* begging for employees.
And, guess who generally fills that need? Not the people you say are out
there willing to take the job.

> employment situation in this country.

PAH!! Welcome to the real world, Dwight. And, "supposed to" and do is two entirely different things. We still don't sit around and whine about it. Like I said above--we do what we gotta do and then we *begin the task of seeing what we can do--if anything--to change the route of what we perceive as being awful.* Is there a part of that you did not understand?

>
> We don't simply because too many
> choose to "knuckle under" instead of demanding better. Of course, they

>

I am one of those who have mostly knuckled under. I used to try to change things. But, without change I've done pretty well. It's a sad commentary, but I and many are too busy knuckling under to try to change a thing--welcome to the reality of what's really going on.

Then figure out a way to be satisfied. Because you are absolutely right. The one thing you and I differ on is that I do *not* believe the immigrant/migrant/transient population in this country are displacing as many as you believe. I believe they are doing jobs that--no matter how bad it gets--"we" have been too spoiled to consider doing ourselves.

Is that what it takes? You have to be fined or convicted? If thats
the case, why are you constantly bitching about some of the members of
the R.R.C.B group? Have they been fined? You and Doug are
hypocrites. He can jam repeaters, and thats ok, but let someone
discuss how to bias an amp and you go nuts over it.

The ARRL leaves that up to the local Public Information Officers. These are
un-elected positions within the section.

The ball was dropped apparantly, or they were just too busy to bother.
Then after the event, the press isn't interested.

It's been like that for years. I agree...we need to start blowing our own
horns.

There it is Larry, perception. The assholes that stole the symbol of
Southern Independence from the South, its flag. Have won....eh? Not
hardly my good man.

No, we WILL NOT remove the stars and bars from our flagpoles. And to show
how ignorant you are, and that you have fallen for Northern propaganda....AT
NO PLACE DOES THE CONFEDERATE FLY IN PLACE OF THE FLAG OF THE UNITED STATES.

If the Confederate flag is flown it is ALWAYS flown either away from the US
Flag, or BELOW the US FLAG. As it shoud be.

Again...the Confederate flag IS NOT A RACIST SYMBOL. If it is perceived as
such....it is YOUR PROBLEM, not ours.

Of course - as usual.

But with the addy-tood that paper exhibits, I wonder how receptive the
"Gang" will be...

Your opinion noted but there's a couple of other sides to it.

I think a BIG reason all that bandedge stuff has been in the writtens
for so long is that once-upon-a-time some hams had a problem staying
inside the bands. And if you look at the enforcement letters, some
still do.

But the *big* problem with the "should be readily available in
anyone's shack" idea is that if you accept that idea for band edge
rules, why not for other rules as well? Say, the power limit on
various bands, or who can be a control operator, etc. Why shouldn't
"I'll just look it up when I need to know that" be good enough for
any FCC rule, if it's good enough for band edges?

I say it's inherently uunfair - but worse, if FCC did it, they'd be
saying there was nothing in the General test that a Tech really needed
to know in order to have General privileges. Bad precedent.

> As to qualifications, I have
> said all along that most license privileges bear little or no

Not at all!

I'm saying that except for those few parts of 4 HF bands, some vanity callsign privs and some VE stuff, there's nothing that an Extra can do that an Advanced can't. Extras don't get more power, or more modes, or more bands - just some more kHz. Except for enforcing those few kHz, it's not much work for FCC. When's the last time an Advanced was cited for operating in the Extra subbands?

There's no question pools for those license classes anymore and no administration of exams for them, so no work for VEs and VECs.

All existing Advanceds have had almost 4 years to upgrade without any more code testing. Yet the number of Advanceds has dropped by only about 16% in that time - and at least half of that drop is expirations.

> My point is that what was decided could or could not change. It
> depends on the end goal and the FCC's considerations.

Agreed.

My point is that there's no pressing need to make the "dead end"
license classes disappear. The KL7CC paper talks like it's a major
problem, but I can't see how that's true.

Tech Plus will simply disappear in (at most) 6 years, 5 months and 11
days even if no rules at all are changed, because FCC has been
renewing all Tech Pluses as Techs. And at the rate the number of
Novices is declining, they'll probably be gone by then too.

The "end goal" should be a better license structure.

Then why legislate it?

> Interesting point, however,
> since anyone (ham/nonham) is allowed today to build there
> own DC supply powered from 120 v AC. Perhaps the NO homebrew
> would be limited to transmitters only.

Again, why legislate it?

Consider - anyone can build their own receiver, too. In the vacuum
tube era, voltages of several hundred were common in receivers. So
were AC-DC supplies, voltage doublers, etc. So under those proposed
rules, it would be OK for a ham to have an old hot-chassis AC-DC rx
like the Hallicrafters S-38B, or a homebrew receiver on an open
chassis with hundreds of volts B+ - but not a manufactured rig with 50
volts on the transistor finals...

Doesn't make any sense.

That dosen't mean that the hams were not involved. I would wager that
there were/are a lot of other volunteer orginizations involved also that
did not see any spotlite.

> On a positive note, this would have been a great example of showing how

I saw on the news the other day, some homeland defense official (can't
recall who it was), was saying that they plan on making use of the
thousands of ham radio operators as part of homeland defense.

If you do a Google Search Groups for twistedhed the results are about 16 ,100 and most of them are his obsession with Leland Scott.

Twirted obsession with Leland Scott.....starting with accusing him of child molestation.....and posting and emailing his phone number with

intent to harass. Soon Twisted is off the deep end accusing Leland of everything under the sun. The newsgroup including Twisteds own friends Landshark and Randy begged him to stop. Too late for Twisteds mind has snapped.

I don't think this happens very often any more, however. All the digital phone standards I know about (CDMA, TDMA and GSM, I don't know about iDEN) use encryption, both on the control channel and for the voice payload. While I've seen academic criticism of the algorithms they use, I don't think there is a practical way for a guy with a scanner hearing the signals to crack this. Digital mobile phone service is still secure for practical purposes.

The cellphone cloners used to get their data from the AMPS control channel, which was unencrypted, but I'm pretty sure there are no cell phone companies left which sell exclusively analog phone service (it has probably been 5 years or more since you could buy an analog-only phone). AMPS support continues to exist, by FCC mandate, only to support off-network roaming, which means that pretty much the only AMPS users you're likely to find are people away from home in rural areas not covered by their provider's digital service. This is a small enough population that the reduced opportunities for fraud of this type hardly justify the cost of the equipment for programming the phones.

I think these days the bulk of cell phone fraud is subscriber fraud, where service is obtained using someone else's name and personal information.

So by your reasoning, unless you're fined you're innocent.

That's odd coming from the re.radio.cb legal police. What about
all the keyclown name calling? No fine means innocent in your book$.

So until you produce evidence of fines, that the regular posters in
rec.radio.cb , have been charged with, please STFU.

Of course he is. That's why he
admitted and was able to make a
complaint against Scott for using
the Nic WA3MOJ@AOL.Com
to Scott's ISP. He had to send a
complaint through his AOL account
to Scott's ISP, otherwise they would
just ignore the complaint.

The fact is the US Govt HAS signed on with ITU and honors *most* treaties.

WRT to "freebanding" within the US and its territories, all I can say is to
go
ahead and do it. If you get popped, you have only yourself to blame.

We all can work with our local (within state) media outlets as either a club function or as an individual when our local groups are doing cool stuff or good things. We still could use the positive exposure when it comes to larger scale events like the wildfires or similar from the larger media outlets such as the press, and of course the large networks like CBS, ABC, NBC, FOX, MSNBC, CNN (and whatever other initials we can come up with. There inlies the need for a group, large in scale, allegedly like the Arrl, to do press releases or build contacts within the media etc. Groups like the arrl have the alleged clout and size to catch the attention of the larger media outlets.

Doing a comparison with another group that I am guessing that a good percentage of the group here is eligible for..... AARP! More people know a heck of alot more about the AARP than the ARRL..... And both are important to both groups.

> Jim I'll say this: some.

Your bigotry towards American workers (non-immigrants) is noted. However, we're straying off the subject with way too many personal anecdotes, so lets get back to the core of this issue.

Again, I firmly believe the ONLY reason some people won't do some jobs is because of the wages paid. There are people in this country (non-immigrants) willing to walk into the containment chamber of a nuclear reactor if the pay is good enough. There are people (non-immigrants) willing to walk 500 ft high steel girders of a building construction site if the pay is good enough. There are people (non-immigrants) willing to place their lives on the line to protect you from crime if the pay is good enough. There are people (non-immigrants) willing to lay their lives on the line to defend this country if the pay is good enough. In other words, there are people (non-immigrants) willing to do any job, no matter how bad or how dangerous, if the pay is good enough. For you to now say otherwise, and instead insist Americans just won't work because they're too lazy or too uppish (immigrants workers are needed instead), is a slap in the face of every hard working American.

If some of your friends and associates are different and won't work if the pay is good (which I highly doubt), that says more about the people you hang out with than it does about the American worker. The Americans I see all around me are willing to work. However, the key issue for all of them is the wages paid. It costs a lot of money to even be poor in this country today, Kim. Average rent prices are approaching $700 per month. Average utility prices are approaching $200 per month. Average car and insurance payments, even for an older used car, are approaching $250 per month. Average food prices, even for a young couple, are approaching $250 per month. That doesn't include cloths, medical expenses, gas for the car to get to work, car repairs, hair cuts, school costs for those who want to better their lives, and so on. And that certainly doesn't include luxuries or children (mentioned because some don't think the poor should even have children).

The average minimum wage worker is lucky to bring home $600 per month after taxes. With that, even a two income family will have to give up some of the basics of life (a car, a home, food, or something). Needless to say, even common sense suggests few people want to work in those low paying jobs and would rather hold out as long as possible for better paying jobs. You seem to interpret that as they're simply too lazy or too uppish to work.

Bringing in immigrants to fill those jobs is not the answer. That still leaves the people described above out of work and looking for jobs. Indeed, filling those lower paying jobs with immigrants only increases the glut of workers seeking slightly better paying jobs, driving wages down for those jobs too. And the cycle repeats for the next higher paying jobs as workers already in those slightly better paying jobs seek higher paying work to escape the glut in workers seeking their jobs. The ripple effect of this practice is undermining the entire American labor force. In the end, the inevitable result of all this is a much lower standard of living for all working class Americans. And those people are not going to be happy campers, even less so as they hear some describe them as too lazy or too uppish to work.

Increasing wages is the only answer. And if that drives some less efficient companies out of business, well too bad. There are no guarantees in this country (as Charles says) and, if the business is at all worthwhile, plenty of other, hopefully better managed, companies will quickly spring up to take their place.

> page had NOTHING about the California wildfires. NOTHING.

Why would you depend on the ARRL website for "up to the minute" news when there are literally thousands of other news sources available; TV, radio, newspapers, the internet. The LA Times incidently also has a website of their own.

Let's see. There's the Fire Incident Headquarters, based out of Idaho, they have a website that updates page viewers on the progress of every conceivable fire in the United States, which the national media uses for a source of information on reporting fires.

The ARRL never mentions anything about the dozen Western states that are burning every summer for months on end. No big deal. Pick up a newspaper, turn a radio or TV on, or log on to the net, you can get far better results from thousands of sources at your disposal rather than trying to make this whole thing a non-issue of bashing the ARRL which you're not a member or.

I'm a member of the ARRL, and the last source of general breaking news I come to rely on is the ARRL.

And, I believe your right, partly. I don't believe anything is that
concrete, Dwight. I am pretty sure there are lots of people who are like
you describe and I am pretty sure--certain in fact--that there are people
like I describe. Nevertheless, I certainly *don't* believe the immigrant
problem in this country is as bad as you believe.

Yes, it does, Dwight. And I am pretty sure I know more about that than you
do. Just 30 years ago I was a welfare mom with two kids, no car, a deadbeat
dad, was a High School Dropout, and lived in a town of less than 1K people.
My kids were raised on fried rice, rice casseroles that I came up with where
Cream of Mushroom Soup was a staple and meat was more a flavor--one piece
maybe two of chicken broke up and thrown into the recipe. Peanut butter
and jelly was often breakfast *and* lunch.

I watched all around me as people got "comfortable" with being bitter and
dismayed and beaten down about where they were. I watched them in my
rear-view mirror as I made decisions I sure enough didn't want to be making
about where I was going to live, what I was going to do for a living--all
the while telling these two kids "everything's OK." And, I watched all
around as people who'd become accustomed to being poor and sad were telling
me I was being a fool to ever think it was going to be any different. They
are probably still there.

And, I empathize with each and every one of the folks who start out young today. It's hard--extremely hard. But, you know what? Housekeeping pays high dollar these days...very high dollar. And, I am not talking about getting a job with a nitwit hog of a person who has a company paying minimum wage and getting people involved in the business. I am talking about jobs like childcare, housekeeping, medical transcription and other computer jobs, pooper scooper, dog walking, house sitting, all kinds of stuff people let go right by them every day--because they are too busy being sad.

There's folks like that, Dwight. Yep, you're right. There are folks who *will* do those jobs. But they are in the minority and how ironic. Because it is more the minority immigrant population that does those jobs than a lot of US citizens.

I know all about what the cost of living is, Dwight. And I know it from a poor perspective and the perspective I am at now. Or, should I say the perspective of believing nothing will ever change to making my own way to where I am comfortable? And, if need be, I'll start over again. Hell no, I wouldn't like it--I'd hate it--but I would do what I gotta do.

Yes, it is a vicious cycle...one more people need to jump on the bandwagon about and get pissed off enough to change. But they won't, Dwight. It's been this way for years--this is nothing new. Hell, you buy anything from China lately? You ever said to yourself you're going to stop buying things from China? BRING IMMIGRANTS IN?????? Hell, stop buying from China. Worry about the commies coming over here? Hell, stop buying from China.

If your answer is to simply increase wages...you're setting yourself up to be miserable. Companies are cutting back, trimming the fat, and freezing wages. And, that is going to be the trend for a few years. The more people want to deny that 9-11 "didn't affect us," the more they are putting their heads in the sand. Since 9-11, this country has been trying to recover. We'll do it...but we were and are a lot more affected than we admit--and Binnie over there knows it.

Oh, and I note that it's OK--from your perspective--to say "too bad" if your solution happens to drive some less efficient companies out of business (re: your remark above, "And if that drives some less efficient companies out of business, well too bad.") But you criticize and call me a bigot for my thoughts along the same lines, from my perspective.

Thanks, Lar---I mean Dwight.

No doubt, every annual paying member, no matter where they are, would
be feeling the bite of higher member and subscription fees. It would
be the feasible thing to do to give "special treatment" to those in
the Pacific Division. This may in fact be another reason why the
Pacific Division isn't given "special treatment"

Don't presume what Condi and Colin think just because of their skin
color. The only ones who make race an issue are Al Sharpton and Jesse
Jackson, both of whom who've never worked a day in their life or set
foot in a church.

Condi and Colin are where they are in life not because they didn't
shirk just to get ahead. On the other hand, in the civil rights
circles, every leader (Jesse, Al, and Kweisi Mfume) has used the race
issue to get where they are today, through tactics of intimidation and
extortion.

Does this make me racist? Hell no, it's the truth.

At 5 WPM, you don't need a computer to copy good or poor code.

I think you've just hit the nail on the head. It's really not how hard or easy 5-wpm is, it's the willingness (or lack thereof) to make the initial (i.e. "initiative") effort to learn the 43 required characters.

I came into the fray relatively unbiased re. the code vs. no-code debate. However, once you hear some of the arguments presented, it's hard not to see it for what it really is.

Yep. Listening to W1AW, if you can copy 7ï¿½ WPM or even 10 WPM, 5 WPM
comes easy.

When I tested for my 20 WPM back in 1993, I had code tapes that were
sending 22 WPM code, coupled with actual on-air QSO's and listening to
W1AW, the 20 WPM code test was a breeze.

You know, I'm starting to get frustrated again. I can do nearly 20 wpm
listening to NuMorse with headphones and in a quiet room. But the leaast
bit of background noise, or the conditions on the air, and my speed
drops like a rock. I hope I'm not running up against my personal
limitations.

>
> How's your fall looking? It's absolutely spectacular here this year!

It started out looking like it was going to be pretty blah, with rain
and not much color. But then it did an about face, and got warm and
beautiful. The leaves decided not to listen to the newspaper"leaf color
experts" - whoever they are.

I give up, Kim. You've convinced yourself American workers are garbage, and immigrant workers are God's gift to the working world, and absolutely nothing is going to change your mind. This fits right into the thinking of many liberals who feel Americans deserve to be poor for all the bad things they've done, while those poor, downtrodden, immigrants deserve all the wealth they can get. And, while we sit here debating, wages for low to medium income workers continue to decline while profits for big business continues to grow - neither immigrants or a growing number of working Americans can get decent paying jobs. At the same time, the factories moving overseas are forcing more and more middle-aged and older workers out of their jobs, adding to the numbers forced into lower paying jobs. And the situation only gets increasingly hopeless as more and more people begin to think like you. Where do you think this is all going to end, Kim? Do you honestly believe big business is going to stop their efforts to drive down wages at your doorstep - that this is never going to affect you or yours? Even small businesses are going to feel the crunch as fewer can afford to buy their products. If you can't see the inevitable outcome to all this, you're simply not looking or are too shortsighted to see. And, with that, I give up as I said before.

Read the definition of bigot and then explain how the sentence above
doesn't fit that definition, Hans.

Bigot (n.) One whose attitude or behavior expresses
intolerance, as because of race, religion, politics, etc.
(Funk & Wagnalls Standard Dictionary)

By the way, "bigoted" is spelled with a single "g."

> Read my lips: Race is irrelevant.

Repeating that is not going to change anything, Hans. Race issues are
everywhere in this country today and are not going to go away simply because
you want to bury your head in the sand and act like they don't exist.

While we're discussing definitions (and since you like to throw the word
"racism" around so much).

Racism (n.) An irrational belief or advocacy of the
superiority of a given group, people, or nation, usu.
ones own, on the basis of racial differences having
no scientific validity.
(Funk & Wagnalls Standard Dictionary)

Kindly show me where I've expressed a belief in or advocated the
superiority of a group in this discussion, Hans. Simply discussing a
race-related issue in a newsgroup is not racism. As such, your charge of
racism is as patently false as your charge of bigotry.

Now that you KNOW you can actually copy International Morse Code. Throw out the canned stuff. Fire up the HF rig and use it.

You must teach your brain to 'isolate' and hear ONLY what you are trying to hear. It takes practice, but it certainly can be done.

Use the most narrow filter at first. Then widden it out. Picking up more and more interference, and try to pick out the characters.

Its fun.

Just keep at it. It probably means you're not quite solid at that speed
yet. Once again you may be expecting too much too soon. FYI, my comfort
zone is 15wpm although I passed the 20. I just don't work it enough to stay
at and be comfortable at 20.

Hold on a sec....

"union bum"?

The basic concept that Dwight is talking about is a "living wage" -
meaning jobs that pay enough in wages and benefits to permit people to
live above the poverty line *without* government help. Yes, paying a
living wage makes products and services cost more, but it also removes
people from the govt. support system.

Some say "the marketplace" should set wages. But "the marketplace" is
tilted by a bunch of factors, such as the exportation of jobs and the
importation of workers.

The "living wage" concept and reality are largely a result of
organized labor unions leveling the playing field a bit by unifying
the many workers in negotiating with the relatively few employees. The
really smart employers learned to treat their workers well enough that
they wouldn't unionize.

Look at what working conditions were like in various industries
100-150 years ago, before organized labor had any real power.
>
> Believe it or not, there are alot more people out there trying to survive on

Yep. $20,000/yr isn't much at all anymore in many parts of the
country. Not to raise a family, anyway.

As for the $15 burrito and coke at Taco Bell, think about this:

At least here in EPA, we have a decent selection of independent diners
as an alternative to the fast food chains. The food in them is not
much more expensive than the chains, and usually better for you. The

workers in those places make at least as much as the fast food chains. One reason for their survival is that they don't spend bazillions on advertising. Another is local loyalty of customers.

So what's the answer, Dwight - Ryan - Kim?

And I give up trying to explain to you that I am affected, Dwight. I work
for and have worked for companies that export jobs out of the United
States--and a good number of employees are people who are here on work
Visas. But, Dwight--I don't have the same fatalist point of view that you

do. This is something that, as I've said, been around for years. Nothing's changed...it's the ebb and flow of the corporate environment.

And, you know what? Screw you for saying that I think American workers are garbage!!! Screw you!!! I think people who are fatalistic about the situation and want to make the situation 100% the fault of US Corporations and immigrants--illegal and not--are the ones who are garbage. Take that a smoke it, Dwight.

You have repeatedly heralded American workers at the expense of the immigrant population, Dwight--and irrationally so I might add. As a last word on this topic--because you seem incapable of a well-rounded discussion on it, let me say that the situation as it exists for *everyone*--not just employees but the corporations alike, in this country purely sucks.

I say there's more likelihood that an non-US born person will do a crappy job; and you say there's more likelihood that a US-born person will do a crappy job. That given, Dwight, then *WHY* praytell are there so many non-US born people doing the jobs? You want to say it's "because of wages." DUH!!!!! I am speaking from the whole picture. We can all stand around all we want and say, "if the wages were raised, US-born people would do the jobs." It ain't gonna happen any time soon.

You have been the one in this exchange that has been unreasonable, over judgmental, spiteful, hateful and quite impatient with the views of others--so much so that the gist of your whole contribution has been to condemn the way others believe while offering no real constructive contribution of your own. Have you offered any solutions? Have you reasoned any explanations for it being the way it is? Have you once, just once even *tried* to understand anything anyone else is saying? NO. You have done nothing but tell me that I think Americans are garbage.

I have provided clear reasons for why I believe the statistics would show that US-born people would be less likely to perform the jobs that a current immigrant population will and are performing. You've rebutted with no evidence to the contrary of what I am saying. You have rebutted also with nothing but indignation and name calling--or very near it--but haven't provided anything substantial to tell me that those news reports, radio talk-shows, news magazine shows, Congress, and real-life conversations I've been involved with pertaining to this issue, don't exist.

Like I said, we can be indignant all we want. But it won't change what's going on. We can whine all we want. But it won't change what's going on. All we can do is be mindful of the situation as it is and create contingencies for ourselves as we things get too close to home and we start being threatened. You act like I've never once been affected by the situation, Dwight. And, I have--a few times. But, each time I have done what I had to do to get through it. And, starting over again is not beyond me. It's become a sporting event for me now.

Take your righteousness and shove it. Right where the sun don't shine. But, before you do...why don't *you* think of some constructive ways to deal with the situation instead of all the whining and finger pointing you've been doing.

Exactly. I look at it this way, if a person doesn't want to learn the
code, fine, if they want to fine, just don't come up to me and bitch
and moan that 5 WPM is a hurdle or mountain too high to climb.

I'm hearing impaired in both ears, and I can copy 45-50 WPM in my head
solidly, and attained the 20 before taking my General class written,
without waivers.

As I said, I can copy 45-50 WPM solidly. 99.9% of my casual CW
contacts are no faster than 18 WPM or adjusted accordingly if I'm
responding to someones else's CQ.

>Pacific Division isn't given "special treatment"

Huh? "feasible thing to do to give "special treatment" to those in
the Pacific Division" ?? Do you mean "not feasible thing to do"?

Also, you are confusing the Pacific Division (Northern California,
Nevada, and Hawaii and other US territory in the Pacific) with the
Pacific Section which covers Hawaii and the other US territory in
the Pacific. The portion of the Pacific Division exclusive of the
Pacific Section does not need and has not asked for "special treatment".

The new Pacific Division Director, Bob Vallio, is a long-time friend
of mine who does not stand for any nonsense. We will see what will
happen, and anyhow I'm not in that Division any more so I have
no say in what will happen except to relay the history of this issue.

Hey Mike!

Believe it or not, that does work for some people. I do know of one person who took a different letter per night and used a program like NuMorse to send that letter/character for a certain length of time. (create a text file with enough characters to keep the program sending long enough, and have the program read from that file.) After a while he got 'em all.

Sorry, but I have to disagree.

Even at the height of CB, when 100s of thousands of people were running illegal CB in one way or another, the yearly "bust" figures were just into double digits - it has remained in the 20s and 30s.

Most illegal CBers get ignored, some get a "Please don't do that" verbal warning, some may get a written warning,.
So, what do the very few big busts get... £1000s in fines? Prison?
No... a couple of hundred pound fine if any - and the illegal equipment snatched.

If the RA were "harsh", they would consider illegal CBers as "Pirates"... and give them the very large Pirate fine. Those using Amateur illegally would be hunted down like dogs and given the punisment available under UK law - prison.

When nearly everyone was using illegal antennas, they changed the antenna rules to make those antennas legal.
When CBers were illegally using the American frequencies, they legalised the band for CB use.
When they wanted American CBs out of the hands of CBers, they made it legal for Amateurs to convert the sets to 10 Metre - so they would buy them from CBers, make them legal, and save the RA the bother of chasing people.

If they were harsh, they would have put "No DX" and "no talking to foreigners" rules in place. They would ban the import and sales of the illegal CBs marked as "Amateur". They would ban the ownership or use of Amplifiers that work on CB.
America does all those - The UK does none of them.
I would say that our CB service has very few rules, and enforcement only as a last resort.

A few years back, a group of people set themselves up as self-appointed CB police. They went around looking for CB antennas and CBers - sending a list to the RA, for them to catch the licence dodgers.
You would think that the "bust" figure would have shot through the roof - but the RA couln't be arsed to do the chasing.
They now plan to remove the licence next year - so reducing the amount of illegal CBers even further.

Regards,

Peter.

Yep, and this is the greater outrage that is taking place in this country. And, as was said--this was one of the most important emergency spending packages that's been on the table in our history.

If anyone wants to start changing things in America, they need to start changing politicians. And, I don't even care what "party" is changed--they are all essentially the same.

5 wpm is easy. I admit that. However, as you can copy 45-50 wpm, you are
so far to the other extreme end of the bell curve that I don't beleive you
really know that yourself. It would be like Michelle Kwan wondering how
beginners can fall over on the ice.

More to the point, a 5wpm test is slow enough to be pointless, as someone
who passes it doesn't really have much of a useful skill level. At 13 wpm
it was a significant hurdle, but at 5 it's merely a waste of time. Either
way, it still has no relevance to the use of a microphone.It's like
learning to ice skate to take part in a bicycle race.

Now you have my attention, Stacey! What is the nature of your hearing loss, if I may ask? I have tinnitus and am about 60 db down compared to normal hearing, with several 100 db plus holes in various places. One of the weird things about my particular flavor of hearing loss is that all incoming sounds seem to get equal treatment in my brain. Whereas it appears that most people can filter out the good stuff from the noise, I end up treating all sounds equally. No mental DSP here, unfortunately! 8^)

At any rate, I've had to do a lot of work to get this far. Took 6 months of intense work to get to 5wpm, and I've been working daily on increasing my speed for the last month or so. I don't envy much, but I envy those who were able to pick Morse code up in a few weekends.

I'll have to disagree with you a bit here, Kim...

I think before we change politicians, we have to change
ourselves...What we want from govenment, the kind of conduct we expect
and what we are willing to pay for with our taxes.

Americans will scream bloody murder about thier "rights" and the
amount of taxes they pay. Yet they scream even louder when a group of
men get together and commit a horrific act like September 11th and
they wonder why the government doesn't "do something".

Can you imagine the outpore of anger that would have occured if
those 20 men had been arrested on September TENTH...?!?! The ACLU, The
Arab-American League and who knows who all else would have been all
over the press about how we were infringing on thier rights.

But what gauls ME is how people will get indignant about how our
politicians SHOULD be, yet "we" allow someone like Bill Clinton off
the hook despite having been caught lying over and over. Then his
wife gets caught stealing "things" from the White House, and what do
they do? They elect her to the Senate of a state she enver held
residence in.

DO you know WHY she didn't run for office from her HOME state?

WHY should we NOT tolerate them lying about anything else if
we're going to send a message that it's "OK" for the President of the
United States to violate the very same "sexual harrassment" laws that
are now prevelant in every workplace save porno movies and stripper
bars?

As for the cost of things...Well, all I can say is you get what
you pay for. We hamstrung our intelligence agencies for almost 30
years and now we are wondering why they can't "know" certain things.
The business of intelligence is dirty, often conniving, and usually
ugly. Our adversaries know this. That's how they manage to stay in
step with us all too often.

This thing was a "no win" for the politicians.

They know they're putting money into the pockets of the likes of Halliburton and other Shrub buddies to modernize Iraq, yet we can't even find money to rebuild our own roads and bridges at home. On the other hand, if they vote against it (or try to separate out the pork) then they get accused of "not supporting our fighting forces".

Well, then here's the voice of the other extreme.

> It would be like Michelle Kwan wondering how
> beginners can fall over on the ice.

I more liken it to requiring the beginner to learn the basics before
they can skate in the same rink with Michelle Kwan.

> More to the point, a 5wpm test is slow enough to be pointless, as someone
> who passes it doesn't really have much of a useful skill level.

The value is not so much in one's instant proficiency, it's in the exposure level sufficient to allow said newbie to make a truly educated decision as to whether or not s/he wishes to pursue CW any further. There is also the intangible feeling of accomplishment that comes with "earning" privileges by meeting a significant challenge. I truly don't consider a 35 or 50 question multiple choice test out of published Q&A pools of approx. six to eight hundred questions, much of a "challenge."

> At 13 wpm
> it was a significant hurdle, but at 5 it's merely a waste of time.

The more "challenging" the hurdle, the more "privileges earned." Most licenses aren't "rights," they're "privileges." That includes AR.

> Either
> way, it still has no relevance to the use of a microphone.

I don't want to reduce it to just that. There's a bigger picture. (Read: more rounded.)

> It's like
> learning to ice skate to take part in a bicycle race.

No, it's like learning the basics of cycling before being allowed to participate in the race. Most people take issue with the "being allowed to" part and try to give all sorts of lame reasons why they shouldn't be made to "jump through hoops" and hurdle "barriers." Like I said, when you peel away the layers of the onion...theres no substance at the core. And that's the sacrifice some are willing to accept for an "easier" ARS.

Did your Dad & Mom make you take a test before they bought you your first
bike?

But actually, Morse code is a bit like learning to ride a bike.... it's
sort of "self testing"..... if you want to use it, you'll learn how.

Your commentary noted, Hans--but I really wonder how much they really care about what we think any more; one way or the other. I don't know why they'd "hide" their vote. We the People aren't in their scope any more--they do as they please. Know what I think? I think the *only* responses they worry about is those from their big dollar spenders--not We the People. I know, I am preaching to the choir...

The mere revelation that only six were in the debate is enough to raise the question: "if you couldn't publicly support or express non-support this expense, then why would you think the US people should allow the expenditure?" Because, bottom line, the US people deserved more than they got out of this one.

If at all.

>While I can't remember the last "fully homebrew" shack I saw

I can. It's downstairs.... ;-)

Actually, it's not 100% homebrew - some nonhomebrew test gear, a little
surplus, and of course the K2. And I didn't build any of the telegraph keys.

But the main rig, power supplies, antenna tuner, antenna, table, shelves,
cables and control system are all homebrew. You and 366 others worked this
station during SS.

(probably KG6AIG

Doesn't all new equipment have to be certified anyway?
>
>Sorry, but you guys are out to lunch with this cockeyed notion.

(devil's advocate mode=OFF)

On that we are agreed 100%
>
>Code-Free, then Tech-Free .... what next, license free? CU on eleven, good
>buddy.
>
One of the proposed ideas for the "Communicator" license is to remove most of the "radio law" questions from the test and instead simply require that applicants certify that they have a copy of Part 97, read and understand it. Where'd they get that idea?

You watch, Hans - those of us who resist these ideas will be called "elitist" and "stuck in the past" etc.

I, for one, am getting tired of 9-11 being the barometer of how patriotic we
are. Leaving out the disaster, there is so much other stuff hurting this
country--even more than the blatant terrorism that is part of a bigger
picture. Terrorism is just easier to see and be offended by. What about
all the products we buy every day that are made in China--and even before
China "earned" back the most favored nation status. What *are* they doing
with all that money they get from the products they export to this country
and that we buy? That's just one example and I bet everyone could submit
their own pet peeve for dangers that encroach upon this country; leaving
blatant terrorism aside.

>
> Can you imagine the outpore of anger that would have occured if

>

Well, I am outraged at the significance of those being held at at the US prison camp in Guantanamo Bay in Cuba. For just an example of this, see the news article at the BBC's website (add http:// to the following) news.bbc.co.uk/2/hi/americas/2648547.stm. Yes, I know it seems outrageously un-American to have some empathy for these folks, but I do. And it galls me that the situation exists as it does.

> But what gauls ME is how people will get indignant about how our
> politicians SHOULD be, yet "we" allow someone like Bill Clinton off

> they do? They elect her to the Senate of a state she enver held
> residence in.

I didn't get all that riled up about the Clinton debaucle. Hell, I'm thinking they are probably swingers and that news just didn't come out. Don't know about Hillary stealing stuff...was *she* brought up on any charges? See the irony? The folks at Guantanamo Bay haven't been charged with a thing and they're sitting where they are. She gets caught red-handed--at least according to you--and she's now in the US Senate.

> DO you know WHY she didn't run for office from her HOME state?

> bars?

Well, I don't believe "we" did send that message, Steve. I believe "they" decided how the whole thing would be handled and it got handled the way "they" wanted it. They being the politicians and people of preference.

> As for the cost of things...Well, all I can say is you get what

Aw, I'm not so sure we are or were all that hamstrung. Look back on history a few years back...ok a lot of few years' back, and look at the photos of Saddam shaking hands with...who is that?

There's more to outrage than meets the eye, Steve. You're right, though, we do need to decide what it is that is going to outrage us, *us* not them.

Kim,

The only thing they care about is getting elected. Yes, it was a no-win situation, but this country is currently being run by "big money". I still can't believe a drug manufacturer can threaten to cut off Canadians who sell drugs to Americans. If this were a more modest size company, who knows how many laws would be brought to bear.

Frankly, if you are not aware, Congress couldn't care less what the average American thinks, as long as some good publicity, pork, and sound bites can get them re-elected.

Some thirty plus years ago, then Governor Rockefeller of New York made the statement which roughly went "I know our taxes are high, but they are affordable. If you take the typical family of four making $100,000 per year ...". Remember, this would likely be the equivalent of saying $500,000 per year today. Believe me, most politicians are clueless. Who, in their right mind, would consider a family of four making $500,000 per year average?

It is easier to blame the poor (welfare costs sky high), but if you examine the cost of medicare and medicaid, a lot of expense is due to high drug costs. We pay more than any other nation in the world for drugs, and the drug companies threaten to cut off other countries that would sell us those drugs (legitimate drugs, not patent infringing knock-offs) for less.

Here in New York, the courts ruled that the distribution of school aid was illegal (seems they counted kids in New York City as 7/10 or 8/10 of a person. Why?). Aid to the cities is down (and the cities generally have most of the kids with disabilities. I'd seen, over the years, a number of suburbs vote out allowing group homes for mentally impared folks, low income housing, and the list goes on). Here is my bet, now that Rochester has been Gerrymandered into Buffalo for one representative in Congress .... yep, the monied interests have won. No increase in property tax - but the sales tax is going from 8.25% up another .66% and likely higher. Here is my guess: within 10 years, there will be a lawsuit and you will see court ordered bussing around here and everyone will loose. Now you'll add the cost of the bussing to everything else. I can't wait to retire to Florida :)

Of course!

But in fact, the mode used in practically all fiber optic communications is
simple on-off keying of a "carrier".

Very similar, in fact, to landwire telegraph practice, speeded up and
automated, and using photons instead of electrons.

Hardly undercover when the upcoming vote was all over the news and the results afterwards were all over the news.

Although only 6 actively spoke, there were plenty of members in the Senate chamber to listen, weigh the comments and vote.

>
> - Mike KB3EIA -
>

We all envy those who can get it in a few hours. It takes a normal person 30 hours to get to 5wpm, 60 hours to get to 10wpm, 95 hours to get to 15wpm, and 150 hours to get to 20wpm (info from the book "Morse Code, The Essential Language"). Some of us will need more time and a few unusually talented people will get it in a lot less.

So don't be discouraged. Keep at it. Get on the air and make some QSOs even though you need to go slow. If you can tolerate the frustration, try a contest even if you have to listen to the other station repeatedly to pick out the info and then throw in your call. You'd very likely see a noticeable improvement in speed.

Nope, only before I actually used it. It involved training wheels, lots of patience, and constant evaluation...even more so when I "earned the privilege" of being allowed to ride in the street. Good analogy, Hans. Thanks.

Yep... there are a ton of them in this state..... collect a "phat" wage ($20 per hour or more) for a job a kid could do, brag about only working 2 of the 8 hours in a shift, and admit to stealing and other fraudulant practices..... .yeah, those are bums... Not all union workers are bums, but there are alot that are.

>

So.... basically, one way or another people have to pay for it, be it in higher service/product costs or paying in taxes for a government program.

>
> Some say "the marketplace" should set wages. But "the marketplace" is
> tilted by a bunch of factors, such as the exportation of jobs and the
> importation of workers.

Yes, that is what is called an idealism, but in reality it doesn't work that way. Let's look at my county for example..... Republican owners of businesses and places to rent charge considerably higher for products, services and housing. These are also in most of the cases the employers in the area. For example, on average, a single bedroom apartment cannot be found for less than $350-400. That does not even include utilities. The average wage around here, what is considered the alleged "living" or minimum wage is between $5.25-6.00 per hour. Now, do the math on that. The first

of the normal 2 paychecks (paid every 2 weeks) each month barely even
covers the rent, let alone the utilities. Factor in transportation of any
means, and basic food needs, and that exceeds the second check. This does
not include for any savings, clothing or medicine purchases and of course
nothing in the "entertainment" category on the spreadsheet.
That is why alot of people around here are forced to work two jobs. Problem
there is, there is no time left over for family or even better, trying to
take classes to get a degree to get out of the ruts. Typically in my area
as well, certain market indicators such as milk, bread, gasoline etc, is at
least 10-20 percent higher than surrounding counties. Basically they want
you to work for as little as possible, but charge ya up the ying-yang for
everything. Guess that is the American way eh?

Or for a single person either..... that 20,000 grand is PRE-TAX and
PRE-BENEFIT (if any) and can quickly become as low as 13,000-15,000 dollars
depending on the circumstances.

>
> So what's the answer, Dwight - Ryan - Kim?
> \

I don't assume to have all of the answers, but I am sure that you can go through just about any company or organization and thin out the dead-wood. People who just are not returning equivalent value for the service they are supposed to provide as an employee. There is a case of 3 people who are "riding the clock out" in my full time employment place of work. And compared to the remainder of the department they are making more than twice our wages for similar/same work but just have been here a while. With those three people to finally retire or move on, that would allow for at least 4-5 more people to replace them, that will ACTUALLY WORK, and still allow for the rest of the department to get a $1.00 per hour raise, and STILL SAVE SOME MONEY on overall department wages. The math has been figured out here on this and it is true....

The other answer is for employers to finally see the value in helping the employee with training/education. If an employer is credible enough, the employee will stay with that employer with the new training they have recieved.

Even though people want to believe otherwise, there are more and more people having to, and trying to survive on what were supposed to be considered "high school kid" jobs.

Ahhh! But Kim! THAT'S THE RUB ! ! ! !

Senator-hopeful Foghorn-Leghorn stumps the Lone Star State
promising he's "The People's Senator", so we elect him. Then we tell
him "Just get it done and don't bother us", then WE wonder why things
got so screwed up! It's cuz >>WE<< didn't supervise him !

Well what do you THINK they are doing with it, Kim??? The Red
Chinese just put their first astronaut in orbit a few weeks ago. And
who do you think is supplying Kim il-Jong with most of >>HIS<<
play-pretties...?!?!

But just TRY and get Americans to buy more expensive clothes just
on the principle of International Politics and they will laugh at you.

I have some empathy for them too, Kim. I have empathy for the
Palestinians who wake up to see Cobra helos hovering outside thier
homes and for the Israelis who can't ride a bus to work for fear it
will blow up.

That wasn't my point...My point was where do we draw the line
between NOT "impinging" our "rights", but still giving our law and
intelligence agencies the maneuvering room they need to stop these
scumbags?

> > But what gauls ME is how people will get indignant about how our

There's a difference between a combatant and a criminal suspect.
Those men are being held as combatants, not as "criminal suspects".

And that you didn't get "riled up" over the Clinton thing is part
of this nation's problems. We have made "sexual harrassment" so "PC"
that we can't even discuss it without offending someone, yet here's
the alleged leader of the free world doing ALL the things that would
give Gloria Steinman a coronary, and we just blew it off.

What kind of signal does that send?

If you or I invited a junior into the back office and suggested
that they might get some sort of preferential treatment for an hour's

worth of belly-tag, we'd get our butt's nailed to the wall.

> > DO you know WHY she didn't run for office from her HOME state?

That doesn't wash with me...The document that empowers those
"they" says "We, The People...", and I believe if >>WE<< don't take
responsibility for and set the standards of what our government should
be, then we have no business complaining about it.

> > As for the cost of things...Well, all I can say is you get what

How so?

The old original landwire telegraph used a single (usually iron) wire and
on-off keying of an electric current. Fiber optics uses a glass fiber and
on-off keying of an beam of light, usually from a laser. Both sent messages by
time-domain multiplexing.

Nope...sorry. The vote was "secret." If you'd listened Daniel's commentary, that was stated. A senator does not have to tell you one way or the other how it was they voted. Daniel lives in Washington, D.C., so he did not have a senator to ask. He called another and did not get an answer.

The *issue* was not undercover, the vote was. And, again. As the introducer stated, there were *not* any more than six members *in the chamber* when the debate took place No comments were weighed at all...no one is accountable for how they voted--*either* way, I might add. US Senate Majority Leader Bill Frist and Senate Democratic LeaderTom Daschel worked the whole thing out, by the way. It's when they "get together" to work things like this out that make one sigh with resignation...

The secret vote was a mechanism to allow democrats to vote on the issue in a rational fashion without getting in trouble for it among themselves. It worked, too!

> It's when they "get together" to work
> things like this out that make one sigh with resignation...

- Or a sigh of relief, depending on who and where you are.

Actually, in really high speed optical equipment it is both
time domain and wavelengths/frequency (sometimes called color) domains.
There is equipment out there that operates at 1.6 Terrabits/sec.

Cheers,
Bill

I thought he did. I think what he wants you to do is to quit bringing
that point up.

Is it a strawman when there is a paper,suggesting that the testing
requirement be radically reduced?

It's there, the proposal has been made, and the authors rely on their
credentials, despite protestations to the contrary. Some strawman!

Not if that was the direct approach, but people with agendas tend to approach things obliquely on occasion.

I recall a few years back when some minorities encouraged lots of children so as to eventually become much less of a minority. I can think of some funny names to describe that process! 8^)

Life is so strange.....

Multiple "carriers" (different light wavelengths) on the same fiber,
right? Kinda like multiple telegraph carriers of old.

But isn't the basic modulation scheme still on-off keying of the
light, rather than shifting its color or phase?

> There is equipment out there that operates at 1.6 Terrabits/sec.

lessee...10^12 bits/second...that's more than all of the RF spectrum
normally used for radio, right? And that's through *one* fiber that's
immune to EM fields, weather, ionospheric and tropospheric
propagation, EMI and almost everything else except shovels.

Now that's cool.

But it does have a downside. It permits a significant number of US jobs to be outsourced to places like India (or anywhere else that has a significant English-speaking population).

I hope you're right about that, and that the FCC agrees with you.
Otherwise we could have quite a bit of a pool-pah to deal with.

The paper is a self-admitted strawman, for Christ's sake!!!! Have you read
it?

Here is a direct quote: "It is intended as a way to help fellow Amateur
Radio operators understand some of the thought processes that led
us to where we are today. It is not a statement of the way things will
end up, but rather it is simply a plan, subject to change and
improvement. It is, in a word, someplace to start."

If that isn't the classic definition of a strawman then I don't know what
is!

I have to agree with Hans on this. I have asked Jim privately to please
stop harping on the argument that the written tests are equally invalid
as the Morse tests (I know he's playing devil's advocate, but something
that's repeated often enough sometimes catches on and I don't want to
see Jim end up being the best salesman for something that I know he
doesn't want to see any more than I do ...)

Jim, please listen to Hans if you won't listen to me ...

The FCC has determined the ARS to be "primarily a technically oriented service" ... I really don't see ANY "no theory" proposal getting a lot of traction there ... and I will be right in there with Jim and most others fighting
that one.

Let's just stop advertising something we don't want to sell - there will be plenty of time to comment vigorously against it if the FCC ever were to lend any credence to such a proposal.

Ahh, our very own Maginot line!

Imagine how much less work it would have been to get rid of the Morse
code requirements if we just would have kept our mouths shut.

If in the future, if perhaps something like the KL7CC plan is adopted,
do you think this will be the PCTA's fault because we said something
like that may happen? Because we said it may happen?

This topic drifted a long time before I ever started posting on it. It's had a lot of racism accusations, a lot of work ethic comparisons, and even some thought on how the guv'mint should be run. Probably more of that than BPL.

Chalk it up to topic drift.

Even engineering jobs.

Since 9/11, is Congress still letting in 250,000 foreign engineers
each year, or are they just piped in via fiber optics?

> light, rather than shifting its color or phase?

Yes. I wasn't disputing that point, just noting that the on/off time domain
muxing isn't the only way that increased data rates are obtained.

New technology almost always has a downside for some group or groups.
Would you rather such advances not become reality?

Cheers,
Bill K2UNK

BINGO.

The American Snivel Liberties Union has really made a mockery of itself
and transformed a once good & useful organization into nothing more than
a corrupt, leftist-slanted outfit. You are 100% correct; had those people
been arrested previous to 9/11, there would have been the greatest outcry
and a claim that thier civil rights were violated.

Some say that there was sufficient evidence and that law enforcement
agencies
were simply dropping the ball and asleep at the wheel and allowed them to
do what they did; however, it is entirely possible that for the reasons I
mentioned,
they did NOT arrest them.

And over 3,000 people died for it.

Nope, not even the use of CAPITAL LETTERS makes this a chat room. It is still a newsgroup.

> All can talk on anydamnthingtheywant
> because they got licensed as amateurs.

All can discuss any topic because it isn't outlawed. As you've been quick to point out, this is an unmoderated group. You've frequently gone quite far afield in your postings. We'll chalk this up as another "Do as I say and not as I do" comment.

> One can only talk
> about actual amateur radio policy issues someplace else... :-)

What's it to you? You aren't ivolved in amateur radio.

It wasn't? I'd be interested in a reference on that.

I think what we're really seeing is inflation outpacing the minimum wage.

Fun fact: In 1976 I started a job as a degreed engineer at the princely sum of about $12,000/yr - about $6 an hour. About minimum wage today, but back then the prices of most things (particularly housing and transportation) was so much lower that it was a lot of money - to me, anyway.

2352. Amateur Radio Newsline™ Report 1369 – November 7, 2003

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-08 10:09:40 UTC
From: radionews@aol.com
Message-ID: <20031108050940.20615.00000111@mb-m10.aol.com>
Source record: 81878

Amateur Radio Newsline™ Report 1369 – November 7, 2003

Amateur Radio Newsline report number 1369 with a release date of Friday, November 7, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Rain brings the California wildfires under control but ham radio stays on the job. A report from the scene on Amateur Radio Newsline report number 1369 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CALIFORNIA WILDFIRE COMMS WINDING DOWN

The Southern California wildfires are on their way to full control. This as the winter rains come early to the region. As a result, many hams who had been full time fire communications volunteers have gone back to their regular jobs and ham radio emergency communications efforts are winding down. Others are still on the front lines and now its time for assessment. Gordon West, W-B-6-N-O-A, spent most of last week at a Red Cross Shelter in the city of Fontana. He takes a look at the contributions made by the regions Amateur Radio communicators:

--
Audio report only. Hear it by downloading this weeks audio newscast file at http://www.arnewsline.org
--

Emergency service officials agree that having ham radio made a big difference in successfully handling this disaster situation. (ARNewsline(tm))

**

RESCUE RADIO: REPEATERS LOST IN SOCAL WILDFIRES

We all heard the grim statistics of the homes and businesses were destroyed by this years California wildfires over a million acres of land has been scorched. But there is one total that the mass media won’t report. That’s the number of ham radio repeaters knocked off the air by the blazes. While exact call signs are not yet available, we did ask reporter Matt Lechleiter, W6KGB, to find out which radio sites were most affected.

--
It's estimated that close to 30 repeater or remote base systems have been affected by the recent Southern California firestorm. These systems are either off-air, were before switching to backup power, or were destroyed by the fires. The number of systems actually destroyed by the fires is unknown - we'll follow

up on this in a subsequent report.

Communications sites affected include Oat Mountain just north of Los Angeles, Sunset Ridge and Heaps Peak to the East, and Mount Otay near San Diego to name a few. Each of these major sites lost power due to one of the fires. News reports say that it could be over a month before power is restored to these locations. Until then, battery and generator power are keeping the commercial and amateurs two-way systems on the air.

There are also several repeaters that are believed to be safe but which are still off the air. This is because they live at more remote mountaintop sites that also lost electrical service to the flames. And just like the more accessible sites that I mentioned, it might be a quite a while before commercial power is returned.

For the Amateur Radio Newsline, I'm Matt Lechliter, W6KGB reporting.

--

If you are a Southern California repeater operator whose system was affected by the firestorms, or if you know of one that was, please send the details to us. We will include it in an upcoming report. Our address in cyberspace is nerwsline@arnewsline.org (ARNewsline(tm))

**

HAM RADIO IN SPACE: NEW GEAR FOR THE ISS

Radio gear from some well known ham radio manufacturers is in space. This, as the group known as Amateur Radio on the International Space Station announces the delivery of the so-called Phase 2 ham equipment to the ISS. Norm Seeley, KI7UP, has the details in this report:

--
A Russian Progress supply rocket has delivered a Kenwood TM-D700E, dual band transceiver to the International Space Station. The installation of this new radio will mean a significant boost to the power output of the ARISS station from 5 watts to 25 watts.

The Chairman of Amateur Radio on the International Space Station is Frank Bauer, KA3HDO. He says that the software for the D700 has been programmed for five modes of operation. These are for standard F-M phone, crossband repeater, APRS, packet and an emergency mode. Bauer predicted that APRS probably will be the default mode when a crew member is not actively using the ham station.

Next up will be gear from Vertex-Standard, the Yaesu brand folks. Bauer says that a Yaesu FT-100D, some SSTV equipment, along with new headsets, will be taken to the space outpost on Progress Flight 14P. Look for it to launch in January.

But says Bauer, that will be the endof the transport of any more ham radio gear for quite a while. At least until the space shuttle returns to flight in September 2004.

But that in itself could be a blessing in disguise. KA3HDO says that the equipment still on the ground will be tested this month at the Service Module facility in Moscow. This will permit making sure that the Phase 1 and 2 systems are compatible. RF testing will also take place.

According to Bauer, current plans call for the current Expedition 8 crew of Mike Foale, KB5UAC, and Alex Kaleri, U8MIR, to install the new hardware after ground tests are complete. Previous crews already installed four Amateur Radio antennas to cover HF, 2 meters, 70 cm and microwave frequencies.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

What about hams on the ground getting more chances to talk to the crew on the ISS? Bauer says he's been working with U-S and Russian space officials to have them dedicate a few additional hours each month for operation and amateur station maintenance. (ANS, ARISS K7CCC)

**

HAM RADIO IN SPACE: SPAIN SCHOOL CONTACT A BIG SUCCESS

Still with news of ham radio on board the International Space Station, word that the Ourense, Spain school contact on October 23 was very successful. 75 children and 25 parents gathered at Ceip Seixalbo school as European Space Agency astronaut Pedro Duque answered sixteen questions in Spanish using the ARISS radio system. All nationwide radio, TV broadcasters, and newspapers were present. Duque has since returned to Earth along with the Expedition 7 crew. (ANS, ARISS)

**

Break 1

(5 sec pause here)

**

RADIO LAW: HAM ACCUSED OF AIRPORT SECURITY BEACH GETS CONGRESSIONAL SUPPORT

The ham who is accused of breaching airport security has gotten some unexpected congressional support. Amateur Radio Newsline’s Mark Abramovich, NT3V, has the rest of the story:

--
Leading Democrats have openly criticized federal authorities for prosecuting Nathaniel Heatwole, W-Zed-3-A-R. Hes the ham who admits to planting banned items on airliners, allegedly to show flaws in airport security. And some in congress think he is almost a hero for pointing out the Transportation Security Authority's inability to properly protect airline travelers.

Minority Leader Nancy Pelosi is quoted in print as saying: " "I don't think he had criminal intent. I think what he was trying to do was to show how exposed we are and what our vulnerability was, and he tried to tell TSA and he gave a trail to them."

Pelosi said that if theres any penalty imposed, it should be some kind of community service. And Representative Ed Markey, a powerful Democrat from Massachusetts agrees. In fact, Markey says that any community service sentence imposed on Heatwole should be with the TSA. And Markey adds that TSA officials should listen to him so that they know exactly how to prevent a terrorist from doing the very same thing.

And even the Republicans are getting into the act. Representative John Mica of Florida is chairman of the House aviation subcommittee. He said that prosecutors should concentrate on people who actually pose a threat, adding that Heatwole should not be the fall guy.

None of the politicians are not trying to excuse Heatwole’s action, but they more and more are beginning to agree with Pelosi and Markey who apparently believes that the punishment should fit the crime.

For the Amateur Radio Newsline, I’m Mark Abramowicz, NT3V, in Philadelphia.

--

Heatwole is headed back to court on November 10th for a preliminary hearing. What was not expected is the level of support of some in congress and the obvious pressure that puts on prosecutors working on the case. (From published news reports)

**

RADIO LAW: THE BPL WAR - THE ARRL VS. MANASSAS VA.

The ARRL has put officials in Manassas, Virginia, on notice that the League will act on behalf of its members. This, to ensure full compliance with FCC regulations when the city's Broadband over Power Line system starts up in a few months.

Manassas is a suburb of Washington, DC. The League said that it was responding to media reports that Manassas has approved plans for a citywide B-P-L rollout in the near future. As such, ARRL Executive Vice President David Sumner, K1ZZ, has faxed the Mayor of Manassas to point out the potential for RF interference from and to any Broadband over Power Line data distribution system. (ARRL)

**

ENFORCEMENT: FCC ISSUES 2ND LARGEST FINE IN HISTORY

Meantime, the FCC has proposed issuing the second largest fine ever for on a broadcast indecency issue. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--
The FCC wants to force Infinity Broadcasting to pay a fine of $357,000. This, for airing a shock jock radio segment in which a couple was said to been

involved in the most intimate of human experiences in New York City’s famed St. Patrick's Cathedral.

According to news reports, the FCC proposed record forfeiture is in response to complaints from the public following an August 2002 broadcast of the "Opie and Anthony" show and aired over thirteen Infinity owned radio stations. The nationally syndicated show was canceled a week later and hosts were fired.

Four commissioners voted for the fine. The fifth said the agency should have taken even stronger action. He said that the FCC should have gone after Infinity's radio licenses and taken their stations off the air.

Infinity has 30 days to pay the fine or appeal. The company has indicated that it will use the legal recourse.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

If upheld the amount paid would be second only to the $1.7 million dollars Infinity paid in 1995 to settle several cases against shock-jock Howard Stern. (FCC)

**

ENFORCEMENT: USERS RESPONSIBLE FOR REPEATER INTERFERENCE

Users and not the operator of a repeater are responsible for interference problems to another New Jersey repeater system. This is the gist of a September 12th letter to Andrew Woerner, K2ETN, who operates a repeater bearing his callsign.

Back on July 7th the agency notified Woerner that it had received complaints that his repeater, operating on the 146.355/146.955 MHz channel pair, was causing interference to the coordinated W2RAP repeater on the same frequencies. The complaints alleged that Woerner’s repeater was previously coordinated but that it has relocated since the coordination was issued.

The FCC requested that Woerner provide information in response to the complaints. He did, and in a follow-up letter, the FCC said that it has reviewed his information as well as detailed reports provided by the Metropolitan Coordination Association and the Area Repeater Coordination Council.

The FCC says that coordination does not appear to be an issue in this case. Rather, the interference problem seems to result from users of the K2ETN repeater, which is located in Northern New Jersey, attempting to access that repeater from locations in Southern N/ew Jersey. As such its repeater users who are interfering with the W2RAP repeater and not the person running the K2ETN machine.

The bottom line. The regulatory agency says that this situation does not appear to warrant its intervention. Instead its calling on everybody to work together to minimize any interference to the W2RAP machine. (FCC)

**

ENFORCEMENT: FCC PROPOSES $120,500 FOR ANTENNA STRUCTURE VIOLATIONS

Meantime, its the fine of all fines for radio tower violations. This, as the Federal Communications Commission releases a Notice of Apparent Liability on October 31st. One proposing a $120,500 forfeiture against SpectraSite Communications, Inc., of Cary, North Carolina for safety-related violations of the Communications Act and the Commission's antenna structure rules.

Specifically, the FCC is going after SpectraSite for its failure to register and light its antenna structures following an investigation conducted by the Commission's Norfolk, Virginia Field Office.

The FCC says that the amount of the proposed fine represents the statutory maximum available. The Commission says that it decided to propose a significantly higher forfeiture than generally used in such cases because SpectraSite has a prior history of antenna structure rules violations. It says that SpectraSite has received three previous forfeitures in less than three years for at least 13 instances of failure to comply with the antenna structure rules. (FCC)

**

RADO LAW: EMDERGENCY OFFICIALS CONCERNED ABOUT PUBLIC ACCESS TO "MIRT"

Emergency responders are concerned that MIRT, or mobile infra red transmitters are falling into the wrong hands. Mainly, into the hands of people not willing to obey traffic laws.

A mobile infra red transmitter allows personnel aboard emergency vehicles responding to emergency calls to quickly change specially-equipped traffic signals in their favor. That was fine until Internet websites began offering the same devices for use by the public for around $300 a pop.

Unlike radar jammers and certain laser detectors that emit radio signals, the mobile infra red transmitter and other signal changers send out a beam of invisible light. Since light is not controlled by the FCC the devices do not run afoul of the agency's rules.

Needless to say that this is causing concern for those who rely on the technology for legitimate needs. Don't be to surprised if states begin enacting their own laws to control the sale and purchase of the units.

More on the situation and the device is in cybrspace at www.detnews.com/2003/commuting/0310/26/a01-307303.htm and http://www.themirt.com (CGC, others)

**

COMMUNICATIONS CRIMES: INDUSTRY VS. IDENTITY THEFT

Microsoft and other technology giants have launched an industry alliance to thwart identity theft and boost confidence in e-commerce. The Coalition on Online Identity Theft will campaign to improve e-commerce record-keeping, beef up Internet security and enforce penalties against identity thieves. The

formation of this group comes in response to growing concern over the growing tine of identity theft crimes and government pressure on industry to help to thwart it. (Published news reports)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

T-HUNTING NEWS: THE BIRDS OF FALL

If you are into hidden transmitter hunting, listen up. This one is for you. Keeping track of over 300 migrating radio tagged birds. Joe Moell, K0OV, is here with the details.

--

Since 1998, you've heard me reporting on hams and scanner fans tracking Burrowing Owls that migrate from Canada to southern states and Mexico. Researchers are so impressed by the capabilities of hams to do this sort of thing that they are asking for help with other critters. Right now, we're starting our biggest ever project, with more birds and more states involved. Nick Myatt of the Arkansas Cooperative Fish and Wildlife Research unit has radio-tagged 360 American Woodcock in Minnesota, Wisconsin, and Michigan, and he wants hams to help him find out where they're going. They're heading out now, and the list of possible stopover and destination states is big, including Southern Minnesota, Southern Wisconsin, Southern Michigan, Iowa, Illinois, Indiana, Kentucky, Missouri, Eastern Kansas, Eastern Oklahoma, Arkansas, Tennessee, Mississippi, Alabama, Louisiana, and Eastern Texas. If that's where you live or travel, please check my Web site for the list of active frequencies, all between 150 and 152 MHz.

Also at this time, Dave Sherman, a Biologist with the Ohio Division of Wildlife, is looking for help in keeping track of two radio-tagged Sandhill Cranes that should be leaving Ohio about the time you hear this. More information, including the frequencies, is on the Web. Go to www.homingin.com

Besides the frequencies, you'll learn how to identify the special characteristics of a radio tag signal, and you can subscribe to an e-mail list for fastest notification of these studies. That's homingin -- one word -- homingin.com

From southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.

--

Again, more information is at Joe's website. Its in cyberspace at www.homingin.com. And remember: homingin is one word. (K0OV, ARNewsline(tm))

**

NAMES IN THE NEWS: QCWA SEEKS NEW G.M.

In other news, word that Jim Walsh, W7VLN is resigning as the General Manager of the Quarter Century Wireless Association and the groups Board of Directors is looking for a replacement. Among the responsibilities are attending all meetings of the QCWA board, keeping full records for the organization and conducting the general correspondence. A solicitation for nominees is on line. You will find it in cyberspace at www.qcwa.org/manager.htm (QCWA)

**

CONFERENCES: 30TH ANNUAL EASTERN VHF/UHF CONFERENCE

The 30th Annual Eastern VHF/UHF conference will be held next April 16th to the 18th, at the Radisson Hotel in Enfield, Connecticut. Planners say that the conference has been moved to the spring time to help alleviate numerous conflicts with other ham radio activities and vacation schedules in August. Guest speakers, proceedings, articles and overall volunteers are being solicited to help out. Prize donations are also being solicited from vendors and members. More information is available from conference chairman Bruce Wood, N2LIV, by e-mail to bdwood@erols.com (VHF Reflector)

**

BEACON NEWS: C6AFP COMING BACK ON THE AIR

Steve Rutledge, N4JQQ says over the VHF Reflector that the C6AFP beacon in grid square FL16, should be operational soon. This, thanks to W4WSR who rebuilt the old one that WZ8D originally supplied.

That one took a lightning hit last summer. Rutledge says that he was able to salvage the RF board but that was it.

Rutledge thanks C6AGN, whose Q-T-H the beacon now lives at. This is in Coco Bay, Green Turtle Cay, Abaco, The Bahamas. He says that Bill should be back on the island on or about the time this newscast hits air. Hopefully we will hear the beacon sometime later this month. (VHF Reflector)

**

INTERNATIONAL - INTRUDER WATCH: PIRATES OF THE PACIFIC

On the intruder watch scene, VK6XW in Albany Australia reports over 130 of them in the ham bands in recent days. The majority are foundd on 20 meters and appear to be Indonesians, with the rest being Asian Intruders including a number of fishing boats. VK6XW says that the boats also use Amateur Radio VHF frequencies for ship-to ship communication.

Meantime, Chris Wright, VK2UW in Lighthouse Beach New South Wales Australia reports on other pirates in the Pacific. This group is using Amateur Radio calls such as VK4ZLY, several Zed L calls and American calls -- portable VK.

These are also on 20 meters and Chris says that they have become a major headache to a number of regularly schedule ham radio nets. (Q-News)

**

DX

In D-X, word that XV9DT is active as 3W22S now until the 31st of December. The special callsign is to celebrate the 22nd South East Asian Games, hosted by Vietnam. (GB2RS)

Also, HB0/HA0HW/P and two other stations will be operating from a location 1350 meters above sea level in Liechtenstein through the 10th of November. The three operators will be active on 160 to 10 meters, with an emphasis on the low bands. Modes used will be CW, SSB and RTTY. QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: NYC HAMS RUN THE RACE

Kenya again ruled the New York City Marathon but it was ham radio that kept the race running. Amateur Radio Newsline's Henry Feinberg, K2SSQ, takes a look at the November 2nd event and the radio amateurs who kept it moving along:

--

Steve Mendelsohn, W2ML: "When people say 'why do you do it' my answer is always the same. I'm in it for the T-shirts."

--

And after 27 years as Communications Director for the New York City Marathon, Steve Mendelsohn W2ML, has to have quite a collection. But Mendelsohn is also the first to tell you that he is only a small part of a big ham radio organization that keeps all the races within the New York City Marathon moving. And 2003 was no exception:

--
Mendelsohn: "At about 8 o'clock we went to the actual starting line at the Verrazno Narrows Bridge and Alan fired the air-horn that's starts the race for the athletes with disabilities. And, 15 minutes after that it was the start of the wheel-chair race; and 15 minutes after that was the start of the hand-cranked race and fifteen minutes after that the elite women. And finally, at 10:07 our operators climbed into vehicles -- because we maintain control of all of the vehicles on the course for safety purposes -- and we use Amateur Radio to do it -- and down the course we went.

At the other end, we climbed out of the vehicles; everyone went to do their next assignment and from the time that the male winner cross the finish line at roughly 12:15 p.m. until the time that we closed down the Family Reunion at 6:30 at night and started to tear down, 411 hams worked with the other 12,000 volunteers to make this the smoothest, best marathon ever."
--

The Alan that Steve referred to is Race Director Alan Steinfeld, W-2-T-N. They were but two of the 400 plus Amateur Radio volunteers who came out this year. And Mendelsohn says that the hams were kept very busy, especially in assisting in medical communications as runners fell by the wayside:

--

Mendelsohn: “We had people went down virtually everywhere on the course. The hams were there with the doctors to help and provided a great deal of medical communications back to the Family Reunion area. This allowed the families to know that a runner had dropped out: That they may have been taken to a hospital or that they were simply going home.”

--

Mendelsohn says that between 800 to 900 pieces of health and welfare traffic was passed between 10:07 a.m. and 4:40 p.m. He also says that 2003 was the years of APRS at the New York City Marathon. Ill have that part of the story next week.

With part of the course of the New York City Marathon in sight, I’m Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

As for the race results. Kenya’s Martin Lel, running his first ever marathon won the Mens division. He timed in 2:10:30 beating out defending champion Rodgers Rop. Meantime Margaret Okayo smashed the course record. She won the race for the second time after crossing the line in 2 hours, 22 minutes, 31 seconds, shattering her own record by almost two minutes.

Let me start by saying I don't have all the answers either, Ryan. However, it is fairly easy to see where some of the biggest problems are. The most obvious is corporate profits today. Product quality is dropping (plastics), wages are relatively stagnated, product prices certainly haven't dropped much, but corporate profits have went through the roof. Perhaps a mechanism to reel in or put a cap on corporate profits is the answer. How to do that is the ten thousand dollar question (or, in this case, trillion dollar question). I'm somewhat radical, so I prefer the outright purge method - a cap on product price increases for several years and an immediate increase in overall wages (with caps on immigration or other negative factors effecting workers). This will drive some marginal companies out of business (the purge) and will slow down the economy sharply. But, over a several year period, more streamlined companies will eventually replace those put out of business and the economy will recover. At that point, the cap on product prices can be reduced, letting competition once again drive the market.

The second most obvious is the concentration of marketplaces. So, if the above isn't acceptable, perhaps this is the place to look. What I'm talking about here is larger corporations gobbling up whole market segments, driving smaller companies out of business. Lets take an example. Wal-Mart moves into a town offering a wide range of products. Of course, the new store doesn't offer a wide selection in any department, but it does carry the basics in each department - just enough to take away what local businesses call their bread-and-butter products (the products stores depend on to pay employees, rent, and so on). As that happens, local stores are forced to depend on the sale of high end products where sales are far less predictable. The inevitable result is that many smaller stores simply collapse. And this isn't just happening in the retail industry. It is happening in many industries (publishing, news, entertainment, manufacturing, transportation, and so on).

The next most obvious is credit. In many markets, high prices are supported only by massive credit activity. For example, the automobile market. Prices have climbed sharply mainly because credit is much easier to get, in much higher amounts, than just a few decades ago. Put a regulatory cap on credit in this market and prices have to drop if companies want to sell cars. Of course, the same is true for other markets (home construction, consumer goods, and so on). The biggest danger to this solution is the tendency for companies to pass on any initial losses to consumers (lower

quality products) and their own employees. The first will correct itself over time, but the second requires additional labor protections (wage increases, a cap on immigration, and efforts to prevent companies from moving overseas).

Like I said, I certainly don't have all the answers. Even some of the problems are elusive. However, it is clear that even minor regulatory modifications, not massive government programs, can have a dramatic impact. The idea offered in the first paragraph also has the advantage of keeping product prices down for consumers. The idea in the second paragraph requires more effort, but offers greater returns over a longer period of time. The idea in the third paragraph offers the most benefits, but will have the most negative impact on consumers in the short term. For a truly robust economy, perhaps parts of all three should be considered.

I thought the minimum wage was exactly that - the minimum a single worker needs to maintain even the most basic standard of living. If it isn't that, what is it supposed to be?

The problem today, as more and more people become locked into lower wages, is that the minimum wage doesn't address the extra needs of the worker's family or future. Taxpayers pay a price for that down the road (welfare, food stamps, medical costs, student aid, and so on). If companies paid better wages, much of that would be sharply reduced.

Grow up, Kim. If you can't handle spirited discussion and debate, then you're clearly in the wrong place because most of these newsgroups were created for exactly that - not pleasant, dainty, little discussions that never offend your delicate, child-like, sensibilities. Regardless, if you post obstinate and contrary opinions in these newsgroups, then you should expect, and be prepared for, obstinate and contrary responses (without crying about it for days afterwards). Whatever the case, I wasn't put on this Earth to cater to your sensibilities, so will only consider that to a limited extent when responding to what you post (and it will be a cold day in Hades before I consider it at all when you attack me personally).

Especially since the Carl's real intention behind his comment was based
(I think) on my being some minor irritant to him, rather than a desire
to keep the newsgroup pure and On Topic.

Hold on a sec, Dwight. "Corporate profits" are the basis of any capitalist system. Without 'em, our economy collapses.

>Product quality is dropping (plastics),

In some areas, yes. But people still buy the products!

>wages are relatively stagnated, product prices certainly haven't dropped
>much, but corporate profits have went through the roof.

How much corporate profit is excessive? If a company is worth $1 billion, and their profit is $100 million, that's a 10% return on investment. Is that excessive? Who decides?

>Perhaps a mechanism
>to reel in or put a cap on corporate profits is the answer. How to do that
>is the ten thousand dollar question (or, in this case, trillion dollar

But without the details it's a moot point. Suppose a company has a string of bad years and then a good year - should their profits in the good year be confiscated and a blind eye turned towards the bad years?

> I'm somewhat radical, so I prefer the outright purge method - a
>cap on product price increases for several years and an immediate increase

Price controls were tried in the late '60s and early '70s to "Whip Infaltion Now". Didn't work in the long term.

>This will drive some marginal companies out of business
>(the purge) and will slow down the economy sharply.

At the very least. And the political and economic backlash will be overwhelming.

Because the *market* (people who make the buying decisions) go to the Wal Mart instead of the local stores. That's where the real problem lies - people who do not think about the long-term economic results of their actions.
>

Do you know this for a fact? Car price increases also reflect the enormous investment in engineering and tooling to build cars using the latest technology. Remember when most cars fell apart before reaching 10 years or 100,000 miles?

>Of course, the same is true for other markets (home construction,
>consumer goods, and so on).

As long as people are willing to pay the prices, the markets are driven that way. Supply and demand.

What about people trying to get started as homeowners? Raising the price of credit makes it impossible for them to buy a first house.

Some months back I refinanced the mortgage on this place. Took more than 5 years off the ultimate payback date *and* reduced my monthly payment by a few $$. Was that a good thing or a bad thing for me to do?

>The biggest danger to this solution is the

But you also have to consider that the companies will find ways around such limitations. If the govt. is going to seize my "excess" profits, I simply won't have any - I'll set up deferred-compensation programs for myself and other bigwigs, buy down debt and buy back stock, do massive capital programs that *reduce* employment, invest in things to carry my company over the lean years to come, etc.

The big changes have to come from ordinary folks becoming educated and deciding how to spend their money. It's "voting with your wallet" and it's done every day.

And at that time minimum wage was about $1.50 per hour. It wasn't a living wage then either. Entry level jobs have never provided the income to support a family. Anyone that I have ever known in my lifetime (52 years) that made minimum wage either lived with their parents or other relatives, a group of roommates, or had a working spouse even back when I was a child. No adult male that I knew stayed in a minimum wage job any longer than it took to find something else because they could not pay groc, rent, and transportation on that. It has never been high enough to do so.

Wages versus costs is all relative. You have to look at how many hours it takes to buy something. The majority of items but not all take fewer hours of work to purchase than they did in 1976. The cost of electronics is down in terms of hours to buy. The cost of houses is about the same in terms of

hours.

You know Nixon tried wage and price controls and we started developing shortages. Other countries in the world have tried it too and also failed. Every where that has been tried, the standard of living dropped, goods and services became hard to get and unemployment rose. So why try what has already been proven to fail.

Please show that profits are obscene. Don't quote dollars, quote percentage of operating expenses. If expenses are say 100 trillion, then a profit of 1 trillion (1%) is so dangerously low that the company is on the verge of going bankrupt. Any company only making a 1% profit has difficulty getting investors, difficulty in getting expansion capital, and has no safety margin to ride out an economic downturn. On the other hand, let's take another case. If a small business has operating expenses of $100 and makes a profit

of $1000 then that is an obscene profit since it is 10 times the operating expense. So you see just quoting a dollar figure doesn't tell the whole story.

> perhaps parts of all three should be considered.

However, history has proven that it is not possible to predict the results of these "minor" regulatory actions. At this point in time no one is knowledgeable enough to do so and it's better to let the system react to the free market principles.

In addition, you have left out the most workable option. That is to work toward a world economy that enjoys a comparable standard to ours. Once that occurs, industry will find it more economical to produce more locally to trim shipping costs. Once it becomes equally costly to make a car in Japan as in the US for example, then the lower shipping cost means it's better to serve the US market with cars made in the US. The main drawback is the fact that it will take a very long time before the world standard of living matches ours.

Only if you expect to live in a group setting (i.e. at home or with relatives or with roommates), have just barely enough clothes for work, eat basic foods (meat is NOT a daily item), and spend minimum on transportation (i.e. take the bus or have a junker car). It has never, ever risen to the level of allowing a person to support a family of four in their own home and own a moderately good car. It wasn't that high when implemented and has never gotten close to it.

The minimum wage is just high enough to keep a single person with no dependents from starving and freezing if they are willing to settle for bare bones survival. It's never been higher than that.

You are not supposed to stay in a minimum wage job. You get work experience, demonstrate your ability to be dependable, get recommendations (i.e "he/she is a hard worker") and move on.

The solution is not to mandate a higher wage but to actively seek out these people and get them ready to move on to the better jobs by making training, etc accessible.

When I was young (too long ago), I worked minimum wage jobs but I certainly knew that was not something I should consider doing lifelong.

But each also created new work. If the worker was smart enough to see it coming, they started preparing for the new application before it totally killed off the old. We may not have blacksmiths but the body shops keep pretty busy.

2367. The 14 Petitions

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-08 18:01:50 UTC
From: lenover21@aol.com
Message-ID: <20031108130150.21232.00001955@mb-m13.aol.com>
Source record: 81893

At the close of the ECFS on 7 November 2003, the number of
documents on public view are:

RM-10805: 214
RM-10806: 203
RM-10807: 167
RM-10808: 183
RM-10809: 169
RM-10810: 171
RM-10811: 923 Total: 2,030 (10811 has 45.5% of total)

RM-10781: 321
RM-10782: 271
RM-10783: 276
RM-10784: 254
RM-10785: 256
RM-10786: 422
RM-10787: 674 Total 2,474 (10787 has 27.2% of total)

Grand total: 4,504 documents for all 14 petitions.

The above does not represent the entirety of records submitted to the
FCC since some concerning RM-10805 through -10811 may not have
been fully checked for content or, if received by surface mail, may not
have been entered into the record.

Comment period for 10805 through 10811 is officially closed, but some
may be late-filed. It should be noted that FCC 98-143 comment
documents are still on public record and the last comment filed was in
September, 2003; official close of 98-143 comment period was 15
January, 1999.

FCC 03-104, the Docket on Broadband over Power Lines has 5,081
documents on record as of close of ECFS on 7 November 2003.

Control of the chat room is now returned to regulars for discussing the
vital interests of the regulars on such amateur radio policy topics as
the U.S. civil war, disadvantaged low-grade workers, U. S. foreign
policy, choo-choo trains, fast-food establishments, and the usual
outrage of regulars at other regulars not conceding their innate
superiority on all topics.

True enough!

But when jobs are outsourced across the ocean, is enough new work created to compensate for the loss?

As I recall it, wage and price controls caused some shortages because certain costs could not be controlled. For example, the wellhead price of natural gas was regulated but the cost of drilling wasn't, so a lot of folks either stopped drilling altogether, or, when they were drilling for oil but hit only gas, they'd cap the well and take the loss in one lump rather than put the well into production and lose money on every cubic foot of gas produced.

It's actually even more complex than that. Operating expenses are only one metric - there's also return on investment, market volatility, stock prices, regulatory controls, and a bunch of other factors.

For example, suppose a business with a total investment of $1 million has $10 million in operating expenses and $100,000 in profits. Profit is 1% of operating expenses but 10% of investment - is this company on rocky ground or not? If the operating expenses are fairly fixed, even a small drop in sales will put the company in the red. But if the operating expenses rise and fall in sync with sales, the company may be in a very solid position, profit wise.

There are all sorts of other examples. Some industries are so cyclic that they *need* high profits in good times to carry them through losses in bad times.

"Law of Unexpected Consequences"

Look at the auto industry. Fuel prices were kept artificially low until the 1973 embargo, when they became artificially high, and the fuel itself became scarce.

Because the market had become used to a semingly inexhaustible supply of cheap fuel, the US auto industry did not develop fuel-efficient cars, and transportation alternatives like transit died off (or were actively killed to get rid of the competition to the private auto). This shortsightedness set the stage for massive inroads in the US market by foreign carmakers who *had* developed fuel-efficient cars.

In the case of cars, this has already happened in some cases. Many Japanese companies (Honda, Subaru, Toyota, to name just a few) make cars in the USA because it's cheaper!

VW started that trend way back in the '70s by buying the Westmoreland, PA facility from Chrysler, and building Rabbits, Golfs and Jettas here instead of Germany. VW later sold that plant to Sony, who uses it to make CRTs (because it's cheaper to make them here!)

> The main drawback is the fact
>that it will take a very long time before the world standard of living

Actually a bit more, as I recall. But in any event we're talking $3000/yr to
$4000/yr, max..

>It wasn't a living
>wage then either. Entry level jobs have never provided the income to
>support a family.

Agreed - nor were they meant to. But it *was* possible for a person to live on them - probably more so than today.

>Anyone that I have ever known in my lifetime (52 years)
>that made minimum wage either lived with their parents or other relatives, a
>group of roommates, or had a working spouse even back when I was a child.

Pretty much the same here.

>No adult male that I knew stayed in a minimum wage job any longer than it

>transportation on that. It has never been high enough to do so.

'adult male'....ahem.....
>
>Wages versus costs is all relative. You have to look at how many hours it
>takes to buy something.

Exactly! And you also have to take into account things like creeping taxation (even if the laws don't change, inflation causes people to pay more of their income in taxes) and increases in the number of 'necessities'.

Taxes are a big part of the game, too. At one time the income tax rules were such that people on the bottom end who knew the rules could pay very little in taxes. I remember when:

- *all* interest paid (not just home mortgage interest) was deductible.
- *all* documented sales tax and *most* documented medical costs were deductible
- the various personal and dependent deductions were larger *in infaltion adjusted dollars*

>The majority of items but not all take fewer hours
>of work to purchase than they did in 1976.

In some cases, yes, in others, no.

>The cost of electronics is down
>in terms of hours to buy.

True to a point - but on the other end of the scale, those electronics are often non-repairable, and have limited useful lives, so that they must be replaced more often.

It it actually easier to restore ham gear that is 30-40-50 years old than much of the newer stuff, because parts for much of the newer stuff are simply unobtainable except from junker units. The displays in the popular TS-440S is one example - they are no longer made, and yet they are often one of the first major parts to fail, so your chances of lifting one from a junker are slim.

>The cost of houses is about the same in terms of
>hours.

A lot of that depends on the interest rate and taxes. Interest rates in the '70s were double-digit, approaching 17% in some markets at times - for home mortgages! But since all that interest was deductible, the *effective* interest

rate was less, depending on your tax bracket.

Escalating home prices makes it harder to get started, though, because the size of the down payment keeps growing. And since many of the fees involved with buying and selling are a percentage of the price, the amount of cash a first-timer needs gets really high.

Compare this to 40-50 years ago, when interest rates, taxes and down payments were low.

Exactly, people won't produce things they can't make a profit on. Thus it
results in shortages and job losses leading to reduced buying power leading
to layoffs in other industries and so on.

As people have always done:
1) Some will whine and barely get by.
2) Some will simply make the best of what they have and do a bit better
3) Others will forge ahead and strive for their own personal best
development and productivity and will be reasonably comfortable.
4) Yet others will create an opportunity and become the next Bill Gates.

Two problems here, Your Scuzziness.

First of all you seem to think you were in control of something.
You are not, nor have you ever been.

Secondly, this is not a "chat room". For one who is constantly
berating licensed Amateurs for not being aware of technology or it's
applications, you seem to have a problem with the concepts of various
Internet applications.

Strange. Buth then, you ARE the epitomy of strange.

Consider the consequemces if they don't.

I had the eyesight in one eye restored with an experimental
medication used in a very high tech procedure that was Phase 2 of a
study for FDA procedure approval. If the company that manufactured
the medication and proposed the procedure had not been required to
do Phase 1 (medication safety test) or indeed the entire approval
study first, what would have happened had the medication not proved
safe to use in the first place (permanent blindness, I was told).

In our field, consider the effects of headlong approval of BPL on
spectrum usability. Full speed ahead, damn the torpedoes.

Yes, Bill, I am 100% in favor of defining and eliminating or at least
guarding against the downsides before running off to market a la
Micro$**t Windows junk.

Exactly!

I was just counter arguing Jim's concern of negative consequences
likly deriving from any new technology. The reality is, or should be,
as you state...BUT, too often the workers and/or other industry
leaders don't see it coming...or refuse to believe it.

Cheers,
Bill K2UNK

Is it always one for one, or more created than lost? I don't
know and probably neither does anyone else. The point is that
when politics or socialistic intents are the basis for holding
up or limiting new technology, then a crutch on govenrment is created
which does no good in the long run (IMHO).

Ever read "Atlas Shrugged"?

The "negative impacts" I mentioned were not intented to include
health or life threatening side effects. The discussion has been around
"negative
impacts" in the area of job displaceents and/or industries failing.

The discussion has been on the economic downsides (jobs lost, industries
driven out of existence), not on bonafide health, life, or illegal
interference issues.

Another example. Would you have held back on digital photography
because it is negatively impacting the print film camera industry?

Cheers,
Bill K2UNK

Exactly.

Even more recently, look at the mess that the electric power industry got into
in parts of California some time back because of botched "deregulation".

>> [snip]

There *is* a need for regulation of industry - we just have to be very careful
as to how that regulation is done. For example, I don't think US companies
should have to compete head-to-head with foreign companies whose managements
don't have to worry about environmental rules, safety rules, child labor laws,
etc.

In some ways they still are. Much of what we consider "American" cars are not
100% "Made in USA". In fact, many "foreign" cars have higher domestic
content...

In the past quarter century, my immediate family motor pool has included 2
Fords, 1 Saturn, 3 VWs, and 2 Hondas. All "Made in the USA".

I don't think it's an equal demand. In most cases, a good CAD op can turn out the same work faster than an equally skilled manual drafter. This is particularly true if an existing drawing can be modified rather than drawing from scratch.

When I started in the design office at (undisclosed former employer), all work was by hand drafting. Now, in that industry, it is all CAD work - even to the point that the old linen tracings are usually scanned and treated as CAD files.

And that's for plain old 2D electrical/electronic stuff. The mechanical and architectural folks are the big shots in that department.

I recall a time when an office of any size had a "typing pool" and "file clerks" - jobs that were relatively unskilled but paid decent wages and benefits. Computerization almost eliminated those sorts of jobs but did not replace them with other jobs.

It depends on the situation. Sometimes it makes more sense to do a job elsewhere. Sometimes it's shortsighted.

>The point is that
>when politics or socialistic intents are the basis for holding
>up or limiting new technology, then a crutch on govenrment is created
>which does no good in the long run (IMHO).

Again, it all depends on the situation. And that game is played both ways - sometimes government backs an industry, often with unforseen consequences. For example, I'm old enough to remember being told that we would soon be flying all over the globe at supersonic speeds. But only the Concorde ever entered commercial service, and that era has ended. Supersonic flight for civilian air travel simply costs too much for the time saved. The Concorde *never* made money, as I understand it.

In fact, the whole airline industry totters on the edge of bankruptcy, propped up by massive government bailouts and subsidies, direct and indirect.

Or look at nuclear power. We were told over and over that it was "the future" and that a way would be found to deal with the radioactive waste. As if.

>Ever read "Atlas Shrugged"?

Many times. I have it in hardback. The chapter on what happened to the 20th Century Motor Company should be required reading. She hit at the core of what should be obvious but is often not understood, or openly denied: You cannot consume what isn't produced.

I think "The Fountainhead" is actually a better book, though.

But Ayn Rand's philosophy is seriously flawed because it simply ignores certain realities. Her characters are not realistic human beings. When you look at her own life, you see that even Ms. Rand did not live according to her own principles.

For example, no matter what her heroes do, none of them ever gets sick, hurt, or pregnant. None of her heroes ever finds that there is something they want to do that they are simply no good at. None of her heroes, or even main characters, has a good family relationship - most are orphans, or have only one relative, who is almost always antagonistic. None of her main characters has any children, or hobbies, or religion, or anything other than either their work (heroes) or the destruction of others' work (her villains).

The real world is far more complex than that.

btw, the inaugural train ride on the John Galt Line was derived from a head-end ride Ms. Rand took on the 20th Century Limited.

laws,
> etc.

And of course we need basic regulations such as preventing one company from selling temporarily at a loss to drive another company out of business and so on. However what I meant was that we do not know enough to manipulate the economy to create prosperity. I.e. The most productive approach is going to be the free market economy that has mechanisms in place to prevent unethical business practices (as described in my first sentence) and to prevent the drifting towards monopolies so that there are competing companies.

The items in the last sentence of your paragraph will change as these foreign countries become more prosperous. The US and European countries did not enact such laws themselves until we were our economies were strong enough to allow us to do so. This is part of what I was talking about when I said problem of foreign competition will eventally be solved when the foreign companies reach our level of prosperity. Of course in the meantime it does make it difficult for us. But who ever promised life would be easy?

Well it's not going to work to try to manipulate the economy and market place. So as a society, we have patience and help these other countries to become as prosperous as we are. And we deal individually with the hardships as we have always done in the ups and downs of life.

No these jobs did not pay a decent wage. People in these jobs could not live independenly on that income and raise a family. They either were a second wage earner in a family or a single person living at home or with room mates. The pay was just barely above minimum wage and it was definitely not a "living wage".

>I have to agree with Hans on this.

You're avoiding my question too, Carl. Why is that?

>I have asked Jim privately to please
>stop harping on the argument that the written tests are equally invalid
>as the Morse tests

That's NOT what I've said at all! You're twisting my words into something
completely different.

I'm saying that the same arguments can be used - and will be used - by some
against both tests. The process is already started - see KL7CC's comments on
the recent petitions.

>(I know he's playing devil's advocate, but something
>that's repeated often enough sometimes catches on and I don't want to
>see Jim end up being the best salesman for something that I know he
>doesn't want to see any more than I do ...)

So you're just asking me to shut up. Is that what we have to look for in the
amateur radio of the 21st century?

Did you ask KL7CC and the other authors of that paper to shut up?
>
>Jim, please listen to Hans if you won't listen to me ...
>

I've never seen you guys more eager to get someone to be quiet about something. Tell it to W5YI. Oh, no, Fred's sacred - no one must criticize Fred - he's the Maximum Leader.

btw, his outfit sent me another one of those renewal packets. This time they want $6 to do what I can do myself with a few mouse clicks.

>> > Apparently you didn't read the KL7CC paper, Hans.

>>
>> - Mike KB3EIA -
>
>The FCC has determined the ARS to be "primarily a technically oriented
>service"

Right. Now what the heck does that actually mean? How does it somehow prove the need for multiple license classes and written tests such as we have now? Why can't hams be left free to choose what parts of amateur radio to pursue?

> ... I really don't see ANY "no theory" proposal getting a lot of
>traction there ... and I will be right in there with Jim and most others
>fighting that one.

How will we fight it? Saying amateur radio is primarily a technical service doesn't prove anything more than the old "trained pool or operators" mantra.

Has taking and passing all those written exams caused anyone to decide to build a radio or be "more technical" than they would have been otherwise?
>
>Let's just stop advertising something we don't want to sell -

Sounds to me like you're afraid that there are plenty of folks out there who will *agree* with KL7CC.....

>there will
>be plenty of time to comment vigorously against it if the FCC ever were

>to lend any credence to such a proposal.
>
It's probably already too late.

The age of the "adult male" as the breadwinner is long gone. Both
husband and wife now pretty much *need* to work. If a family is in the
situation where only one needs to work, then that's great. But let's
hope they don't gloat about it.

As I recall reading a while back, in 1950, it took 14 percent of an
average workers income to put a roof over "his head". That may have
changed a little bit! 8^)

And did you know they are doing seven year loans on cars? If all was
equal, wages and prices, we would still be doing 2 and 3 year loans on them.

There are two of the major outlays for the typical family. Add to that
education costs, which have outpaced inflation by in some cases 400
percent (in my area, we had an around 12 percent increase one year
recently) and you have a bit different picture!

agree. I know some people who are paying over 50 percent of theie take
home pay in mortgage payment. Amazingly enough, their banks allowed them
to get into that situation.

That is how I read it also. You (we) are being told to just keep quiet,
and that if we say anything, it will be our fault if the things we are
warning about come to pass.

To which I would ask Carl and Hans:

Do you really think people are so stupid that they won't think of
something unless Jim Miccollis says it?

Nothing ever stands still. If the political currents happen to make the
entrance requirements for getting into the ARS easier, do those currents
stop once the original goal is met?

Face it, the people who want drastically reduced entrance requirements
or no requirements at all are a subset of those who want no Morse code
testing. Can you deny that?

Do you want to know why Jim? What you are saying is:

>>>>>> T H E T R U T H <<<<<<<<

And that makes some people very very uncomfortable.

I hear Hans telling you about his losing respect for you. I hear Carl
setting you up for taking the blame when the FCC starts seriously
looking at massive reductions in knowledge needed to get a license.

And how's this for getting the great unwashed worked up?:

"Testing for the Amateur Radio Service is an anachronism, a relic of
previous days of left wing Socialist ideas. Much of the regulatory
morass that such thinking has inflicted on us has already been swept
aside, witness the great success with deregulation in the broadcast
bands. It is time we complete the process, and eliminate such regressive
policies in the rest of the radio spectrum." This will truly turn the
Amateur bands into the.............

You think THAT wouldn't sell with some people in power? Another chance
to diss the hated regulators.

Here is what I think it means (to some):

I know people who think that they are "high tech" because they use a
cell phone. Or a computer. Or a GPS reciever. They might not be able to
explain how any of those things work, but by just using them, they
consider themselves high tech. I never asked, but I would be that they
would take one look at my IC-745 with it's 30 some buttons and knobs,
and conclude that just knowing how to operate it was a major bit of
"primarily a technically oriented service"

Oh-Oh! A percon of average intelligence could indeed learn to operate my
rig if they read the manual. NO test required!

We won't be able to fight it, will we? How on earth can Pro-Coders fight
it when we lost the last war against the arguments presented by the No
Coders, and how are the No-Coders going to fight against the same
arguments that they had once used so successfully?

Yep. That's exactly the way I read, you (Mike) read it, and you (Jim) read it. Probably more than just us. BUT, are we surprised? That is status quo in at least this group of people--i.e. rather common practice in this newsgroup to desire that someone "shut up" if that opinion is coming from an opposite or challenging side.

>
> To which I would ask Carl and Hans:

That's a good question, but it really isn't the point. *Whether* people "are so stupid that they won't think of something unless Jim Miccollis says it," or not, Jim has--anyone has--the perfect right to say whatever they'd like.

Hello all .... The above represents some of the "soundest" logic I have read on this group. The groundwork has been laid over the last 10-15 years regarding change and the perceived or not necessity for it. Time will tell if the CW mode will stand on its own, wither and die or .....grow. I wish I could be more of an optimist regarding the service in the future. This feeling is based over what I have read over the years in this and other sources. The "love of radio" has been turned into the "love of computers-internet" This sounds corney but does the magic of radio have a counterpart in the computer-internet users ??? ....I don't have an answer here. What was once secure, or thought so, is now under attack on many fronts. Who wudda thunk that we would get begging letters from the ARRL who apparently took lessons from the NRA. People 50 years ago would have laughed if someone would have listed the infringments on a Constitutional right ....no that would never happen ... guess what folks. Add to that the fact that there is nothing in the bill of rights regarding pounding brass on 80 or yaking on 20.

It will be interesting however to see how the members of our community will react both pro and con to the issuing of cereal box licenses which I feel will eventually come based on the "proper - correct" philosophy of the day.

There is, on a good note, light at the end of the tunnel. This will be if a fiber optic system can pass the economic muster and render RF really antique. In our lifetime ???. I do wish for a long a happy life for the service and hope that it will continue to give others as much pleasure as it has for me over the last 40 years.

Hello there Clint .....

I agree it will all be a rather moot point but it will be the drip off the leaf that eventually runs into the sea of a no test amateur radio license. The future ham will just access the FCC site and type in the info and hit print. I am not a betting man but Clint I will send you a six pack of Iron City beer if testing doesn't turn into a 5 WPM like sham or isn't completely eliminated in 10-15 years.

Blatant foma, Jim. I have repeatedly posted the answer to that question in the words "The "Class A" license test would be of a difficulty level similar to the current Extra class test". If that doesn't answer your question, then you need a course in Remedial English Comprehension.

> Why can't hams be left free to choose what parts of amateur radio to pursue?

Last time I checked, FCC has not restricted which parts of amateur radio I can pursue. I checked with K0CKB who has a lower-class license than I, and she also feels completely free to chose what parts she wished to pursue.

> Sounds to me like you're afraid that there are plenty of folks out there who
> will *agree* with KL7CC.....

Have you seen a SINGLE PERSON on RRAP who has expressed that the KL7CC paper is "the way we ought to be licensed"? Sunuvagun! I haven't either. I guess you're preaching to the choir, Jim, and frankly the congregation is waiting to sing the "Amen Chorus".

I've never asked you to shut up. But I have repeatedly informed you that
you resemble a stray dog with three legs and one blind eye dragging around a
15-days-dead roadkilled stray cat and acting as if you've uncovered
something dangerous.

> If you guys have an answer that simply quashes the KL7CC paper's bad
ideas, why
> are you so afraid?

I'm not a bit afraid. Here's my answer which "simply quashes" your
pizza-shaped kitty.

If you have tendency to forgetfullness, simply bookmark
http://home.earthlink.net/~k0hb and click on the left hand menu item labeled
"FCC Comments".

II Proposal:

I propose that no new applicants be accepted for the current
license classes and that after some reasonable grace period, no
upgrades be available in the current licensing structure.

A. New License Classes:

I propose that new license applications be available
in two classes, namely "Class B" and "Class A".
The "Class B" license would have an entry-level test (basic
regulations, safety, operating procedures, basic DC and AC
electronics). This class would have full frequency and
mode privileges, power limited to 50W output. The license
would be issued for a period of 10 years, and be non-renewable.
holders of this license would be required to have 2 years
experience as a licensee ("time in grade") before being
eligible to upgrade to "Class A".

The "Class A" license test would be of a difficulty level
similar to the current Extra class test, and would have
full privileges at power levels up to 1500W, equivalent to
current Extra Class license holders. This license
would be issued permanently without requirement for
renewal.

B. Status of current licensees.

Current licenses could be renewed indefinitely, and would
retain their current operating privileges.
Current Novice, Technician, General, and Advanced class
licensees could up grade to "Class A" at any time.

> You didn't ask Hans to shut up with his 2 license class proposal.

Are you asking me to shut up with my 2 license class proposal, Jim?

Steve,

Parent or not, everyone's entitled to an opinion about age limits for an amateur license. My opinion is that they're a bad idea.

But the main point is that Len was proposing a draconian solution to a nonexistent problem. It's not the under-14 hams that are causing problems - far from it! The fact that Len could not cite a *single* incident shows how empty his argument was.

Yet nobody told him to shut up.

I don't think I've ever told anyone here to shut up.

But I have seen others do it. For example:

From: lenover21@aol.com (Len Over 21)
Date: 28 Oct 2003 04:35:14 GMT

(in response to K8MN):

"Shut the hell up, you little USMC feldwebel. Learn to READ English."

Just the kind we want for newcomers, huh? New standards of civil debate.

My "pleasantness" to you was directly related to your
> "pleasantness" toward me, but I don't get even, I get ahead.

Perhaps I touched a nerve asking the question? mea maxima culpa

> And just what the hell is "yummy fun" anyhow?

Delicious irony. Like you finding it appropriate to call me stupid when
I ask a question. That you find it an appropriate answer is the key.

There are a lot of hams involved in the high power rocketry hobby.
Check out the Discovery Channel right now -- 3 one hour specials on
the hobby. Also, http://www.flyrockets.com/

Well, yes. Yes, you do Hans. But it's not that that I am pondering upon.
It is that someone made a remark about "shutting up." That is what I am
pondering upon...

Na Bob ...local stuff ..accquired taste ...their lite beer blows away anything I have ever drank and don't mention that Coors Lite stuff. The rumor here is that they dilute regular Iron lager with 100 parts of water to make that stuff. Actually Bob a very good local beer is Stoney's but it has to be draught and fresh. They used to make it in Smithton Pa nr here but it is now made at the Iron City works. BTW Stoney was Shirley Jones's father.

Oh my God ....I have broken one of Len's chat room rules ..... excuse my off topic pontification ....

Off topic pontification alarm is now on standby mode ....

Well Mike our choices in a lot of things in life get limited by success of
the big boys. One can really appreciate the brewing craft at some micro's
but again some put out a horse piss like product. I was in Eastern Europe
this summer and was impressed by some of the major labels there. But guess
what ..Urquill and Saris are owned by the Miller group which is out of South
Africa. Okeciem in Poland was excellent. The svelt (light) beer over there
is about the same 3-4% as our beer. Their regular is 12%.

alarm off ....

People don't have any choice. As an example, I went shopping for a fan recently (to replace the last one that quit). I couldn't find a well-built, metal, fan anywhere in the area. I ended up with a plastic fan that will fall apart in a month or two just like the last ones. I'm not saving any money because I have to keep buying this plastic garbage every few weeks.

> How much corporate profit is excessive? If a company
> is worth $1 billion, and their profit is $100 million, that's

> years?

It's not my job to come up with all the details, Jim. I've already said I don't have all the answers. But why does that make an idea a moot point.

> Price controls were tried in the late '60s and early '70s
> to "Whip Infaltion Now". Didn't work in the long term.

I don't remember that.

> Because the *market* (people who make the buying
> decisions) go to the Wal Mart instead of the local stores.
> That's where the real problem lies - people who do not
> think about the long-term economic results of their actions.

Why should they? They're going to Wal-Mart to buy a power tool or whatever, not ponder the global economic implications of that purchase.

> Do you know this for a fact? Car price increases also
> reflect the enormous investment in engineering and tooling
> to build cars using the latest technology. Remember when
> most cars fell apart before reaching 10 years or 100,000

> miles?

Do I know putting a regulatory cap on credit in the car market will drive down auto prices? Absolutely. If people have to pay more cash up front, with less financed by credit, very few would be able to afford the prices of today's automobiles. Companies will be forced to cut prices if they want to continue selling automobiles and Americans will have more money in their pockets to spend elsewhere (benefiting a wider segment of the overall economy).

And, no, I don't remember when most cars fell apart before reaching 10 years or 100,000 miles. I've owned plenty of older cars in my life (certainly throughout the 60's and 70's) and I don't think any of them were less then 10 years old or had less than 100,000 miles on them. And all of them were built much better than today's models. My $35k SUV today is filled with plastic that is already starting to decay with only 40,000 miles on the vehicle. The Jeep I owned in 1972 had almost 200,000 miles on it with all original body parts (a little dented, but all original).

> As long as people are willing to pay the prices, the markets
> are driven that way. Supply and demand.

But, as always, companies control the supply. The difference is that today's monopolistic companies are not dependant on the daily sales of a single product, so are able to manipulate supply in an effort to raise prices. Since these companies often control whole market segments, consumer are left with only two choices - not purchase the goods they want or pay the higher prices. In today's economy, the concept of supply and demand seems rather quaint, Jim.

> What about people trying to get started as homeowners?
> Raising the price of credit makes it impossible for them to
> buy a first house.

I said nothing about raising the price of credit. I was referring to credit caps - a cap on the percentage of the total purchase price that could be financed or a cap on the percentage of a person's income that could be used to establish the monthly credit payments. Both were common in the fifties, sixties, and early seventies, and the economy and consumers did just fine.

No, they do not.

NCI's mission in the USA is to get rid of Element 1, nothing else. If/when FCC
dumps all code testing in the USA, NCI will cease to function in the USA.

That mission is demonstrated by NCI's petition, which asks FCC to drop all code
testing as a requirement, merge Tech and Tech Plus, and....nothing else.

>
>nope....

Hans' proposal is nothing like what's in the KL7CC paper. But Hans' proposal has at least one major problem: forced upgrading.

I doubt FCC would ever again enact a ham license that wasn't renewable. They dumped that feature of the old Novice more than a quarter century ago.

But even if FCC *did* make the entry-level class nonrenewable, it wouldn't stay that way.

I agree that a person couldn't raise a family on those wages, but I knew a lot of people who lived independently on them. A lot depended on the employer, whether the job was union or not, etc.

Also a *big* variable was the cost-of-living in a particular area. It costs a lot more to live in, say, SF or NYC. But there's only one national minimum wage.

Wage and price controls are commonplace in Europe and the standard of living did not drop, goods and services did not became hard to get, and unemployment did not rise.

> Please show that profits are obscene. Don't quote dollars,
> quote percentage of operating expenses. (snip)

I'm not going to quote anything, Dee. I gave my personal opinion. While you're certainly free to agree or disagree with that, there is no requirement whatsoever to prove an opinion. If, on the other hand, you think my opinion is that important, you're certainly free to prove it's wrong.

> In addition, you have left out the most workable option. That

Wasn't that much more the result of our own import tariffs, significantly increased in the 80's to "protect" companies like Chrysler from foreign competition?

> Hans' proposal is nothing like what's in the KL7CC paper. But Hans' proposal
> has at least one major problem: forced upgrading.

Is forced upgrading a "major problem"? The Novice license is widely acknowledged to have been the best licensing idea the FCC ever had. It admitted people to the hobby with a sort of "learner permit" in which they could learn some skills and meet other experienced hams "on the air". It expired after one year and was not renewable. If it had any fault, it was that it tended to isolate newcomers into little "ghettos" mostly frequented by other newcomers.

My "learner permit" is different than the old Novice license in 4 ways:

1) Rather than isolate the newcomers into narrow little band segments crowded with mostly other newcomers, it gives them expanded privileges on all bands.

2) Rather than expiring in 1 year, it would expire after 10 years, giving them more time to "gain their wings".

3) Power would be limited to 50 watts (in line with prevailing RF exposure doctrine.)

What "major problem" lies in that? (Give me **your**version of the problem, not what you think the FCC version of the problem would be.)

Nope. It was a result of two things. One, the US automakers buckled down and reduced their production costs to be competitive. Secondly in the case of Japanese automobiles, the Japanese government quit subsidizing car production when their automakers succeeded in obtaining a significant percentage of the US market (their government then put the money into subsidizing other industries they wanted to get off the ground). Once that happened the prices of Japanese cars rose. The net result was that US and Japanese automakers were now on a "level playing field" and the customers could once again pick a car from a US auto company without a major difference in cost.

When shopping for a car, how can you tell which are made in the USA? My wife's Plymouth was made in Mexico and my Ford was made in Canada. I didn't find that out until the vehicles were actually delivered. The purchase of these "American" cars certainly didn't help US automobile workers much.

Well, it's hardly even that today. While going to college in the early 70's, my near minimum wage paycheck was enough to rent a one bedroom duplex w/garage ($100 per month) just outside LA (Ontario), furnish that duplex, finance a car, feed the two of us, and pay for some school books ($320 per month from the VA paid the tuition and other school costs). Today, my wife pays almost as much for books and lab fees each semester as I paid for tuition.

Try JC Whitney. That's at least one of many links that came up when I did
an Altavista Search for metal fan. There's loads of other choices. $24.99.

I don't understand. Does the U.S. collect tariffs on imported foreign products? If so, how can U.S. and Japanese automakers possibly be on a "level playing field" if everything else you say above (no subsidies in Japan) is true? Japanese automakers have the added burden of shipping vehicles from Japan and the added costs of the import tariffs. They were obviously willing to absorb the extra shipping costs prior to the increase in tariffs during the 80's. So, with all that in mind, it appears the tariffs is actually what drove a few Japanese automakers to build cars here.

>Is forced upgrading a "major problem"?

It was for the old Novice.

>The Novice license is widely
>acknowledged to have been the best licensing idea the FCC ever had.

Wasn't FCC's idea, but that's beside the point.

If it was such a great idea, why was it closed to new license issues in 2000?

>It
>admitted people to the hobby with a sort of "learner permit" in which they
>could learn some skills and meet other experienced hams "on the air". It
>expired after one year and was not renewable.

Only from 1951 to 1967. And not only was it nonrenewable, it was "nonretakeable" - one Novice license to a customer, and if you'd ever had any class of ham license before, you couldn't have a Novice.

In 1967, the Novice went to 2 years, nonrenewable, still "nonretakeable". The reason given back then was "too many dropouts"

In the early-to-mid 1970s, the Novice went through a period of quick changes. First, the FCC allowed folks who had been unlicensed for at least a year to get a Novice, regardless of prior licensure. This meant a ham could be a Novice forever - two years on, one year off, new callsign and license each time. Again the reason given was "too many dropouts".

Then the one-year-unlicensed requirement was dropped. And the reason given was...

Finally the Novice was made 5 years renewable, like all the other license classes of the time. That was more than a quarter century ago.

>If it had any fault, it was
>that it tended to isolate newcomers into little "ghettos" mostly frequented
>by other newcomers.

The reasons for the limited privileges were:

- to simplify the "ideal" Novice station. 75 watts, xtal control, 3 HF bands CW only meant that almost anybody could have a half-decent station that wasn't much worse than anybody else's. High point was reached with Heathkit's <$100 HW-16 "shack in a box" that needed only a key, speaker, xtals and antenna.

- to encourage homebrewing/tinkering (what a concept). Lot of newbies built their own rigs, either from scratch (ahem) or simple kits.

- to minimize the chances of Novices straying outside the ham bands. Thus the xtals. This was not well-thought-out by FCC, because while the xtal requirement kept Novices inside the bands on the fundamentals, the harmonics fell outside the bands. Also required a different xtal for each band.

- to keep the level of activity high. Novices could count on other Novices being on the air on nearby frequencies almost 24/7.

>My "learner permit" is different than the old Novice license in 4 ways:
>
> 1) Rather than isolate the newcomers into narrow little band segments
> crowded with mostly other newcomers, it gives them expanded privileges
> on all bands.

I thought it gave them all privileges on all modes on all bands - just limited power.

The old Novice license got higher power and VFO control in the '70s, too. More bands and modes in the '80s. Didn't help much.

> 2) Rather than expiring in 1 year, it would expire after 10 years, giving
> them more time to "gain their wings".

Sure. And that's the problem. See below.

> 3) Power would be limited to 50 watts (in line with prevailing RF exposure
>doctrine.)

Not many non-QRP rigs out there limited to 50 watts out. Would it be acceptable to simply reduce the power level on a 100 W rig?
>
>What "major problem" lies in that? (Give me **your**version of the problem,
>not what you think the FCC version of the problem would be.)

First off, the FCC *is* an issue, because there are some things they simply won't enact. IMHO, they won't enact a nonrenewable nonretakeable ham license.

Second, you're pretty vague about the test requirements. How much test for each license? How many questions, and from what pools? If the entry license is kept simple and easy, then the step to Extra is gonna be a *big* one.

But that's not what you asked.

Let's say your idea catches on and the FCC enacts it pretty much as you propose. And let's say the learner's permit (LP) license is popular, because it gives lotsa choices for just a simple written test.

Some folks will upgrade, of course. Some will drop out. The problem will be with the third group - those who are active hams but who are satisfied with their "LP" licenses. If the jump from "LP" to Extra is not trivial, and requires some real learning (just like the old Novice-to-General written jump did), you're gonna have active hams forced off the air at the end of their 10 year terms because they just won't be able to pass the Extra written. Or they won't try, or they can't get to a VE session, yada yada yada.

And the cry will arise: "why are active hams with clean records being forced off the air?" Then you'll see history repeat itself, as the "LP" license becomes renewable, just like the old Novice, to avoid losing those hams.

Since the only difference between your two proposed classes is the power level, there will be quite logical arguments that such a system forces hams who don't want to run high power to "jump through a written test hoop" to gain privilges they have no intention of using. That's gonna be a tough argument to defeat.

Then there's the whole issue of the conversion of existing ham licenses to the two new classes. How many will drop out rather than take the test?

Just my opinion. But it's based on historical fact and long-term trends.

This is precisely why I suggest a 10-year term. Right from the get-go,
these new hams know that they have 10 years to prepare to "re-enlist", and
that it will require some real learning. If they can't cut it after a
10-year apprenticeship, then they weren't meant to be hams. The FCC didn't
"stick to their guns" on the original Novice concept, and I lay that at the
feet of the "entitlement" mentality of the 60s-70s.

> And the cry will arise: "why are active hams with clean records being
forced

This will sound cold, and the IOoDHW (International Order of Dismayed Hand
Wringers) will convene a special session to condemn me, but who really CARES
if we lose those learners-permit holders.

Sorry Jim, but you're waving the same old roadkill again.

> Then there's the whole issue of the conversion of existing ham licenses to
the

> two new classes. How many will drop out rather than take the test?

Read my proposal again, Jim. You'll see how I've completely avoided that problem.

As a closing note..... I really don't have a problem with a high dropout rate among newcomers. I'd be happy to see a million people "have a look at ham radio" and if just 20% stick around, well so be it. That would give us 200,000 new qualified hams. To the 800,000 who left, I say "I hope you had a good time, and it's been nice meeting you. Sorry this ham radio thing wasn't your bag." They're not "bad people" or "quitters" --- they just don't have the same interest in hobbies that you and I do.

That is something that I came up with while I was typing out the reply.
It has a number of qualities that would appeal to some people that are
in power now:

It speaks to lowering or elimination of regulations. This is a very big
thing with some people. It relates itself to the "The government that
governs best governs least" worldview.

It speaks to the continuance of a process that has been going on for a
few years now where less constraints have been put on radio
broadcasters. A disaster IMO, but to some a great thing. I'm talking
about relaxation of broadcaster regs, leading to outfits like Clear
channel owning all the radio stations in town. But as I say, there are
plenty who would think that this would be good.

Spin city, IOW. It is ridiculous, but ridiculous can sell big sometimes.

And that leads us back to a question I posed a while back. Why didn't
the peolpe who were officially agitating for the elimination of the
Morse code test have some simultaneous proposals to fill the vacuum that
would be created when the requirement went away?. It's called
responsibillity.

And here we DO have some people with some ideas, who ARE making
proposals. Who are they?

In 1972, my $2.40 per hour kept me in an apartment, food, clothing, and
even allowed me to buy a motorcycle. That was .20 above the minimum wage.

Let's do the math, shall we?

Say you were making $4000/yr (about $2/hr,) back then. That's
$334/month. Out of that came rent ($100), furnishing ($20/mo?) food
($100?) car ($100 including gas and insurance?). Leaves $13.

That $320 from the VA was almost equal to your salary.

At $2/hr, the rent cost 50 hours' work. I presume utilities were
included.
Today 50 hrs work at minimum wage is what - $300?

And then there's taxes....

> increased in the 80's to "protect" companies like Chrysler from foreign
> competition?

As I understand the tariffs, they were/are only imposed beyond a certain number of vehicles/yr imported. Vehicles *exported* reduce the total. Toyota, for example, set up a line to build Corolla sedans in Japan and Corolla wagons in the USA (might have been the other way around, but the principle is the same). Cars were actually *exported* to Japan - but the Japanese did not count them that way because they were made by a Japanese company.

VW's trick was to build power assemblies in Germany but the rest of the car in the US, Canada, and Mexico. Final assembly was in the PA plant.

There are rules which determine whether a car is "domestic" or "imported" based on how much of its content is made here. The companies are careful to stay above the limit.

Also, the cost of transporting larger cars is greater, so at some point it makes sense to build plants here.

Then there's Saturn, a domestic company (actually a GM division) that turns out a quality car for a competitive price. Only problem is they don't have a complete line - yet.

Why? A company that does such things risks running itself into the
ground.

> However what I meant was that we do not know enough to manipulate

Almost *anything* we do manipulates the market. Except for out-and-out
fraud, you're going to see disagreement on what constitutes an
unethical business practice. For example, take that "temporarily
selling at a loss" thing. Why is that unethical? Most new businesses
see a loss for the first X months of operation - for some, it's years.
Same for when a new store comes to town.

Are monopolies always bad? I'm not sure - think about when there was
only one phone company. They were heavily regulated to keep the cost
of a basic 'phone low. They made it up on long distance and premium
services, which most people did without.

So should we let our domestic industry be destroyed by foreign
competition that places no value on those things? If we do that,
aren't we exporting the hazards of production as well as the jobs?

Remember Bhopal? (chemical plant in India where an accident killed
many people).

As Kim points out, look elsewhere. The 'net gives us a powerful tool
to find other sources. The problem is that you may have to wait for
the item, and pay more for it (delivery vs. sales tax).

The devil is in the details. A good idea can be ruined by bad details.

> But why does that make an idea a moot point.

Because whether such ideas work or not is largely dependent on those
details.

>
> > Price controls were tried in the late '60s and early '70s
> > to "Whip Infaltion Now". Didn't work in the long term.

> I don't remember that.
>
I do. First Nixon, then Ford. Basically came down to denying reality.

The USA economy had been built since at least the end of WW2 on
several concepts:

- lack of foreign competition
- cheap, abundant oil for energy
- high investment of tax dollars in certain technologies (highways and
air transport, military hardware, nukes) and low/nonexistent
investment in other, competing technology (railroads/transit/ships,
domestic electronics, energy conservation and alternative sources).
- unquestioned belief in unlimited growth and consumption, as well as
disposability of almost anything

When the slack ran in, US industry was poorly prepared. Look at the
oil situation alone - gasoline prices had been stable at less than 25
cents/gallon for decades until 1973. Then they doubled overnight, and
5-6 years later doubled again. So did all other petroleum fuel
products. Those increases dominoed through US industry.

> > Because the *market* (people who make the buying
> > decisions) go to the Wal Mart instead of the local stores.
> > That's where the real problem lies - people who do not
> > think about the long-term economic results of their actions.
>
>
> Why should they?

Because it's their responsibility. Part of a free market economy is
being a *customer*, not a *consumer*.

> They're going to Wal-Mart to buy a power tool or
> whatever, not ponder the global economic implications of that purchase.

Then they should not complain when the hardware store and the American
power tool plants shut down, quality degrades, unemployment rises,
etc.

> original body parts (a little dented, but all original).

Those aren't cars - they're trucks.

By "cars" I mean ordinary American passenger cars. And until they had
to deal with foreign competition, they would not last as long as they
do today.

However, note that where and how a car is used makes a big difference.
Those of us in snowy, seaside and humid climates will have far more
trouble with rust than those in arid climes. A car driven 100,000
miles in stop-and-go city traffic has a lot more stresses on it than a
car driven 250,000 miles on the highway. In fact, I've often thought
cars should have running time meters and startup counters in addition
to odometers. Because miles and years don't begin to tell the whole
story.

> > As long as people are willing to pay the prices, the markets

There are *always* other sources. That's why I built an Elecraft
rather than buy Ikensu.

> In today's economy, the concept of supply and demand seems

> used to establish the monthly credit payments.

Now *that* makes sense - and I agree! Would prevent a lot of
bankruptcies.

> Both were common in the
> fifties, sixties, and early seventies, and the economy and consumers did
> just fine.

Maybe in the 50s and 60s, but not in the '70s! But the 70s problems
were definitely not caused by excessive borrowing by ordinary people.

But it all comes down to a level of personal responsibility,
education, and being a customer, not a consumer.

And accepting that there *are* limits to growth, and what we can
afford. People are not necessarily happier with, say, a bigger house,
if they have to go up to their necks in hock to buy it and take care
of it.

The present paradigm will undoubtably hold sway until accountants see
thier jobs shipped out to a third world country.

Which, by the way, will be a whole lot easier than shipping
manufacturing jobs out of the country!

I believe in a free market with minimal but critical constraints.
Although I agree with a lot of what Dee says, I'm curious what she
thinks will happen when we have almost *no* domestic manufacturing.

A side note: Cars and housing cost (relatively) a good deal more than
they did when I was a child. When I was 6, my parents bought a house for
$7000.00 and paid it off in 10 yeas IIRC.

Rather than compare costs, it is best to look at the repay periods. Now
a typical mortgage is 30 years, and cars are often now leased, or
financed for amazingly long periods of time, like 6 or seven years -
which used to be most of the lifetime of a car.

You're right, Jim, it was more than a quarter century ago. And over a
quarter century ago FCC thought that 13 and 20 WPM code tests were a good
idea, and a no-code license was a bad idea. Seems FCC no longer holds those
views, so I think we can safely ignore your argument about what they thought
back then on this matter also.

Do YOU think learners permits ought to be renewable beyond 10 years?

Whoever can deliver the best value for my dollar (note I didn't say "cheapest"), regardless of what imaginary boundary drawn on the surface of the globe they inhabit, will capture my business. I do that in my business and I do it in my personal life. If every commercial enterprise built their business model on that principle then the best would flourish and the poorest would wither. What a concept!

Remember also that that was at a time when young ladies coming into
the job force became nurses, teachers, social workers, telephone
operators, or clerical workers, or else they married young and stayed
home raising kids.

The era of such young ladies becoming technicians or office managers
in any great number was yet to come, let alone becoming professionals
(physicians, engineers, lawyers, etc) or taking "man's jobs" such as
firefighters, police officers, and construction trade / craft workers.

Technology was not the only reason for such changes. Our society
changed.

I'll chime in here, and suggest that it is very much for the better. Many employees in my group are female in traditionally male job titles (engineers, managers, etc.). Their performance, professionalism, and contributions to our success are completely comparable to their male counterparts.

On a more personal note, one of my daughters no longer has a husband and is raising 4 fine kids comfortably because she pursued a technical education and career. In the "good old days" she would not have been able to do so, and her financial picture would have been much more bleak.

Hats off to your daughter and my wishes for her continued success. I have a precocious six year old who has proclaimed that she wants to be an eye doctor. While far to early for any of us (Particularly said precocious one.) to be really know what career path she'll eventually take, we ARE thankful that said path is there for her to choose.

How do you determine "best value"?

Does it include things like whether the producers used environmentally-friendly processes, the working conditions of the workers who actually make the product, etc.?

Or is it based solely on the product itself, with no concern about its production process?

"N2EY" <n2ey@aol.com> wrote

> How do you determine "best value"?

Depending on the product it can be a variety of things, sometimes a very complex mix of parameters determines "value". My factory purchases products of many different types, complexities, which they range from pure "commodities" like solder to specialty products like custom chips, plastic moldings, and similar "proprietary" materials which find there way into our finished goods.

Obviously price factors into the mix, and all other things being equal, price wins.

But "all other things" are almost never equal. For example, some suppliers have earned "dock to stock" status with us because their outgoing quality control is good enough that we do not have to perform incoming quality control. This saves us money (inspection labor) and time (no delay in inspection) so we favor such suppliers even if they may charge slightly higher prices, and they benefit by earlier payment because their invoice is not held pending QA acceptance of their product. Other favorable factors would be their willingness to deal with us on a "consigned inventory" basis, shield us from part shortage allocations, and similar "pipeline" issues. Suppliers with a "track record" are generally favored over "new guys", but new guys who can demonstrate "value added" (which can be a host of things) will certainly be given some business to prove their case. Within reason, we will favor enterprises "close to home" because we feel an obligation to contribute to the communities where we live and work, and there is an obvious advantage to dealing with a supplier who you can quickly meet for lunch to discuss issues, rather than by telecommunications or strapping a 757 to your ass for several hours.

As you can see, "best value" encompasses many factors and issues beyond the actual physical product which you touch and feel.

> Does it include things like whether the producers used
> environmentally-friendly processes, the working
> conditions of the workers who actually make the product,
> etc.?

No ethical company would ignore those issues. Certainly we will not knowingly deal with suppliers who pollute the environment or mistreat their workers, but we are not staffed with EPA-like or OSHA-like inspectors and evaluators In cases where we are qualifying a new significant new supplier, we perform on-site evaluations which give us some visibility of working conditions, etc., but it is naturally not an in depth review of

their HR practices, or validating their compliance with EPA standards. Were we a huge conglomerate like General Motors or IBM, I'm sure we'd have more formal means of dealing with this issue, but in the meantime they obviously are subject to the usual state, federal, provincial (or whatever) regulatory constraints. We make a special effort in the area of supplier diversity, and support many regional Supplier Diversity Councils, such as Chicago Minority Business Development Council, Dallas/Ft. Worth Minority Business Development Council, Georgia Minority Supplier Development Council, Minnesota Minority Supplier Development Council, Virginia Regional Minority Supplier Development Council, Southern California Regional Purchasing Councils, Inc., and others. This context includes woman-owned or veteran-owned enterprises.

here.
>

Let me make this as plain as possible. At one time (prior to the 1980s),
the Japanese government actually gave Japanese automakers money from
government coffers so that the automakers could sell their product at a
price less than it actually cost to get it to market. The goal was to
penetrate the market. Once they penetrated it, they believed that they
could hold a significant share of it as the consumers would be used to
buying their product. Once they penetrated the market, the Japanese
government classified autos as a mature industry and quit subsidizing it.
Once the automakers had to make profits without the benefit of subsidies,
the US companies were able to compete and the Japanese found that they
needed to have manufacturing sites in the US to continue to stay in the
market. The tariffs were never high enough to make much difference in the

situation.

By the way, one of my jobs DID disappear. The company I was working for
decided they could serve the engineering needs of their US customers from
Japan. So I hunted until I found a new job.

Show me a plan with well thought out details (as Jim stated, the devil is in
the details) and I might buy it. Just saying we have to do something and
them mumbling about fuzzy, undefined plans isn't going to get the job done.
Until we have such a plan and have a well developed analysis to show that
the cure isn't worse than the disease, we need to leave the market alone.

> - Mike KB3EIA -
>

Looking at repay periods or relative costs isn't really the way to go either. You have to include a comparison of the features that you get for that cost. People simply want more on their "starter" houses and cars. Today's starter house has relatively more features than those of the past. For example, the typical tract house had no cabinets of any type in the bathroom at that time. The homeowner added them later as time and money permitted. They did not have air conditioning. Now you just about can't sell any new home, even low end starter one, unless it has A/C and so on. Comparing the past to the present is very difficult. Too much has changed and it's like comparing apples to oranges.

> 73 de Jim, N2EY

My job did disappear. One company that I worked for decided it could support it's US engineering needs from the headquarters in Japan. I dug in and found a new job.

As you have said in one of your other posts, the devil is in the details. Until someone can come up with those details and those details can stand up to a rigorous analysis to show that the cure won't be worse than the disease, we need to keep our hands off the economy, market, and manufacturing base.

Also keep in mind that the situation will be self-correcting in the long run. i.e. The foreign makers need the US market and if they kill our economy they will be hurting just as badly as the US.

I stand by my philosophy. The solution is to get the bulk of the world up to our standard so that manufacturing will be more competitive if the products are built closer to the market (i.e. goods for the US built in the US).

But I shouldn't have to do that, Jim. I don't think a quality fan should be an esoteric item requiring a nation-wide search. Yet that is exactly the case. And this was only one example - I run into similar situations just about every day of the week. By the way, the fans are purchased locally because that's in the contract.

> Because whether such ideas work or not is largely
> dependent on those details.

I wasn't aware we were here to make a particular idea work. This is a general discussion in a newsgroup. Anything more than that would require considerable time (which I place a high value on) and a research & development budget (which I haven't seen anyone offer).

> Because it's their responsibility. Part of a free market
> economy is being a *customer*, not a *consumer*.

Again, shoppers are going to the store to ponder the global economic implications of the purchases they make. It is absurd to even expect them to do so (see my next paragraph below).

> Then they should not complain when the hardware store
> and the American power tool plants shut down, quality
> degrades, unemployment rises, etc.

Jim, short of setting up a dictatorship, you're never going to get even a significant portion of the 280 million people in this country to shop the way you want. Consumers in general have neither the business awareness or economic awareness to make those types of decisions on their own. And they also certainly don't have the time or money to fully research an industry each time they want to go shopping for something. Business darn well knows all that, which is exactly why they point to consumer spending as the main cause of a poor economy. Doing so absolves business of any responsibility for that economic situation and instead places the entire nation's economic burden, and sole blame for a bad economy (and blame for the things you list above), on consumers alone. Business has some responsibility in all this. Your argument gives them a free ride when it comes to that responsibility.

Dee,

You must be living in a "fairy tale" world if yo believe this to be still true. It is a simple fact that there is not the same type of jobs available that were around in the 1965-1980's range of time. The changes in the employment economy and shifts in employment trends are why. Take GM for instance..... At least up here in the Tri- Cities and Flint, GM is constantly cutting back, and even closing plants, not the opposite. Hell, locally speaking, Dow Chemical and Dow Corning also have cut more than half their workforce in the past 15 years or so.

Construction jobs around here suck, unless you hold "paper" you are nothing and still making the under 8 dollar an hour range wage, before taxes. I can bring up more examples if you want referring to my area if ya want.

--
Ryan KC8PMX

All of us could take a lesson from the weather. It pays no
attention to criticism.

Pure bullshit, and more proof that some people live in a fairy tale world. Employees are expendable as toilet paper regardless of how well you are as an employee. I know many people who would make excellent candidates as the "employee of the year," but still get passed up, or worse yet, let go because of the fact they were merely nothing but a number on a balance sheet/statement.

Once again, fairy tale world?? Most of the people who are not high school/college students feel the same way, but are stuck in a rut that never seems to fill in. Yes, education is a key, but the problem there is if you

are working 60+ hours or more per week, chances are there is not opportunities to even take these classes. Fact number two, there is something called financial aid, but it DOES NOT cover all of the educational expenses, which are not going to be able to come out of those "minimum" wages.

Now I see what you are doing. You are OVER reacting to any little thing
just to try and hang on to whatever concept it is you have, Dwight.
"Nationwide search?" That is hysterical! It took me less than one minute
to find that fan--and that was at the top of the search list; there were
hundreds to look at.

It took me less than 2 minutes to "happen" to look last night while I was at
Wal-Mart. Now, true, they are a nationwide outlet so you may have to travel
the nation before you find one of those stores--but they had more than one
choice of metal fans. So, don't know why you can't find 'em.

'Scuse me? Surely you are basing the content of your opinions on at least
some kind of facts that you've either experienced or heard, or whatever,
over the course of your life. In fact, I bet I can find a comment you made
to me in this thread that lends itself to not basing my opinions from out of
thin air! And, if you wish to be a proponent of something, it's nearly

imperative that you be able to convince others why it's a good idea. Maybe that's why your ideas flop; and why the American people don't change things as they need to be changed.

I think you probably meant "aren't" above. And, while I don't ponder global economic implications with every shopping experience, I certainly do a lot of the time. I don't buy strictly "American," either. One blaring example is that since the Exxon Valdez oil spill, I have never bought gasoline from Exxon. Now, have researched what other companies own or are owned by Exxon? No. It would probably frustrate the heck out of me to realize it, though. I feel personally gratified by not buying their gasoline. I don't really do it to make a statement to the world--but I should.

> > > Then they should not complain when the hardware store

See Jim? Give a dog a bone and he buries it. When someone submits something contrary to the way Dwight wants everything to be--*without* substantiated concepts I might add--by *his* own admission--he suddenly gets short and impatient with others.

> > Consumers in general have neither the business awareness or
> > economic awareness to make those types of decisions on their own.
> >

So, as in real debate, let's bring this full-circle. You are stating that consumers--presumably *American* consumers--are too lazy and/or incapable of business or economic awareness to decide "smart" shopping decisions?! And, just leaving that by itself, you blare out at *ME* for the idea that immigrant workers are more willing to do the jobs of "less importance" than most Americans will do?! Ludicrous at best.

>
> And they
> also certainly don't have the time or money to fully research an industry
> each time they want to go shopping for something.
>

They sure do. And many do. We live in an information glut these days. If someone can't get information they are looking for, they need to ask someone how to find it--because it's pretty much there and it's there fairly quickly.

I didn't ignore your opinions, Kim. I read and responded to them for a solid week. Instead, what I did was disagree with almost every one of those opinions (after all, they were simply wrong). As for facts, I saw very little of that from you.

Anyway, since you keep bringing up my name in your conversations with others, it's clear you cannot accept the notion that someone might actually disagree with you. Try to get over it and move on, Kim. Your ongoing attempts to find solace from others now is truly not very becoming.

I don't remember what I was paid back then (that was a long time, and a lot of jobs, ago). All I do remember is that it was just barely above minimum wage. But, for the purposes of your example, that salary figure is probably good enough.

> That's $334/month. Out of that came rent ($100), furnishing
> ($20/mo?) food ($100?) car ($100 including gas and insurance?).
> Leaves $13.

Hey, we were hippies back then - we didn't pay that much for furniture and much of what we had was homemade. ;-)

The car payments were also less than that. No insurance and about a tank of gas a week (we rode bicycles almost as much as we drove the car - another hippy thing).

> That $320 from the VA was almost equal to your salary.

Yes, it was. And it was a real disaster when that check didn't arrive on time for whatever reason (it didn't twice).

> At $2/hr, the rent cost 50 hours' work. I presume utilities
> were included.

I think everything except gas was included. We paid the gas bill separately. But that was about it (we couldn't afford a phone).

> Today 50 hrs work at minimum wage is what - $300?

Can you imagine even trying to rent an apartment in Southern California for $300 today (just that - forget the other stuff)? I guess one could be found but I probably wouldn't want to live in it. It would probably take about a hundred hours of work at minimum wage today to find a decent apartment in that area.

Yep, that sounds right. You know, thinking back, I believe I was actually happier back then. I didn't have much, but I don't remember feeling anything was missing in my life. Perhaps I'm getting too old to remember things back then clearly. Maybe I'll start a late mid-life crisis and go looking for those youthful days again. I remember this one girl...

So how much pot did KE4TEW give Riley to get his license back?

Read below, if you can read.

TAMPA, FL: The FCC has requested that General class licensee James W. Dale, KE4TEW, retake the General class examination elements under the supervision of FCC personnel by July 30, 1999, or his license will be canceled.

At:

http://www.arrl.org/news/stories/1999/06/23/1/

TAMPA, FL [UPDATE]: The FCC notified James W. Dale, formerly KE4TEW, on August 3, 1999, canceling his General Amateur Radio license. The FCC had notified Dale on June 18, 1999, requiring him to retake his Amateur Radio examinations prior to July 30, 1999, under the supervision of FCC personnel in Tampa, Florida. According to FCC Attorney Riley Hollingsworth, K4ZDH, Dale failed to appear for reexamination, and his license was consequently canceled. Hollingsworth also warned Dale about continued operation of radio transmitting equipment.

At:
http://www.arrl.org/news/stories/1999/08/11/2/

Now, the "Miracle"

TAMPA, FL [UPDATE]: The FCC notified General licensee James W. Dale, KE4TEW, on September 28, 1999, that it was reinstating his Amateur Radio license with a short-term renewal date of September 29, 2000. Dale had failed to appear for reexamination after being notified by the FCC on

June 18 to retake his Amateur Radio examinations prior to July 30, and his license was canceled on August 3, 1999. FCC Legal Adviser for Enforcement Riley Hollingsworth said the FCC has "since reviewed and accepted" Dale's detailed response and his explanation for failing to appear for retesting. Hollingsworth said the FCC was reinstating Dale's General license "pursuant to our agreement with you," but the FCC letter did not elaborate. Hollingsworth told Dale that if there are "no valid complaints about your use of Amateur Radio" over the next year, he may apply for a routine license renewal at the end of his current term.

At:
http://www.arrl.org/news/stories/1999/10/07/5/

Thus, KE4TEW, a convicted felon who jammed HF frequencies for years while id'ing, did not show up for a retest. Why? That's easy. He paid for his license. Then Riley does what he has done with the others who did not show up, he cancels the license. Good Riddance to this nuisance. Then almost two months later, Riley reinstates the license, WITHOUT THE ORIGINAL RETEST!!!! "Pursuant to our agreement with you" What the hell does that mean?? In other words, even though we know you are not qualified to be on the air, go ahead anyway???? What the hell kind of enforcement is this? It's biased enforcement, Riley's trademark style. So what was the agreement? Harass people on the Internet 24/7? Continue to jam the Liberty Net? Is he paying Riley a monthly fee to be on Amateur Radio? Riley's little slush fund. Did TEW give Riley a large amount of illicit drugs? What was it that made Riley reinstate this known drug dealers ticket that was fraudulent in the first place? Maybe Riley does Rita on weekends?

If you are wondering what kind of ethics violation Riley committed in granting TEW's ticket back under the table contact the Inspector General of the FCC as several already have. Ask Mr. Feaster to add your name to the ethics probe of the KE4TEW case. Then one day you too will know how to bribe an FCC official and make him make unethical decisions on your behalf.

Kim, at least try to think before posting. When you search for something on the internet, you're not exactly limiting your search to your hometown, now are you? The search is nation-wide, and even world-wide. Duh!

> It took me less than 2 minutes to "happen" to look last night

Please provide the names of those fans. I've searched Wal-Mart several times, and taken several of their fans apart, and they do not have an all metal fan. The motor is the most critical part since that is what wears out so quickly. In each of the fans I took apart, major internal parts (gears, bearings, motor mounts, and so on) were plastic, not metal. Of course, I don't expect much more than that from Wal-Mart. They sell cheap fans. But I even found similar materials in much more expensive fans at stores that specialize in products targeted towards business and industry.

Do so, Kim. Show me where I've said anything of the sort to you (the actual message, not a quote you've taken out of context). While I've occasionally asked someone for details on something he or she claims to be fact, I don't believe I've ever asked anyone to provide facts to support an opinion.

> And, if you wish to be a proponent of something, it's

I'm also not here to be a proponent of anything, Kim. When are you going to understand this is just a newsgroup, not a meeting of Congress? None of us have the power to change anything by simply posting to this newsgroup. Instead, we're simply discussing issues, comparing opinions, and perhaps getting a difference insight in the process.

> See Jim? Give a dog a bone and he buries it. When
> someone submits something contrary to the way Dwight

Hello? Where have I been short and impatient with anyone other than you, Kim? I stated what I believe to be bloody obvious - "short of setting up a dictatorship, you're never going to get even a significant portion of the 280 million people in this country to shop the way you want." I don't think Jim would disagree with that and you don't even address it in your response.

> So, as in real debate, let's bring this full-circle. You
> are stating that consumers--presumably *American*
> consumers--are too lazy and/or incapable of business
> or economic awareness to decide "smart" shopping
> decisions?! (snip)

No, that is not what I said, Kim. I said exactly what I meant - "consumers in general [and, since I'm a consumer, that would certainly include me] have neither the business awareness or economic awareness to make those types of decisions on their own." I'm certainly not aware of all the business activities and interactions of the many companies whose products I purchase. Likewise, I'm not fully aware of the economic policies and practices of this country or the countries we trade with. Such an awareness would require an army of employees and the financial resources of the government just to research. Court cases involving such issues, centering on just a single large company, have taken years to resolve.

> They sure do. And many do. We live in an information
> glut these days. If someone can't get information they

> quickly.

Is that true, Kim? You said to ask someone. Okay, since you claim such information can be easily and quickly found, I'll ask you and put your claim to the test. I'm going shopping this morning to buy six products - Mary Jane Bread, Jiffy Pop Popcorn, Pam Cooking Spray, Brawney Napkins, and some screws and plywood from Home Depot (whatever brands they carry). Please provide me with information about each of these products, the companies, and the overall industries, involved. This should include all information needed to be a truly informed, "concerned," shopper - manufacturing processes, product safety, environmental issues, financial information, ties with other companies both here and overseas, markets, details and backgrounds of owners and senior management, employee composition, and so on. Since the information is so easily and quickly found, this shouldn't take you more

than a few minutes (with the results posted here today). When you're finished with that, then you can start on this evening's shopping lists - my wife is going grocery shopping for a few dozen products and we're both later going to the mall for another half dozen or so products.

> Oh OK. It's always going to be the corporate entity's fault.
> Now, speak of liberal slinging...

Did you suddenly lose the ability to comprehend what you've read, Kim? I clearly said, "Business has _SOME_ responsibility in all this." Only you could read that as "It's always..." their "...fault."

And a lot of other things, like secret tests given by FCC examiners,
extreme limits on vanity calls and repeaters, yada yada yada.

> Seems FCC no longer holds those
> views, so I think we can safely ignore your argument about what they thought
> back then on this matter also.
>
That's one way to look at it.

Another way to look at it is to note that since that time, FCC has
consistently made it *easier* and *more convenient* to get and keep an

amateur radio license - of *any* class. As long as said changes mean less work for FCC, that is.

That's been a consistent policy from then to now. Forced upgrading would go against that tide.

One thing I'm not clear on, though. If an LP reached the end of the 10 years but couldn't pass the upgrade test, could they take the LP test and get another 10 years (as with driver's license LPs) or is it one-LP-to-a-customer, as the old Novice was?

> Do YOU think learners permits ought to be renewable beyond 10 years?

I think *all* amateur licenses are essentially "permits to learn". And I think *all* classes of amateur license should be renewable. Just my opinion.

If your proposed LP is going to allow all authorized modes on all authorized freqs from 1.8 MHz on up, it's going to need a rather considerable written test, doncha think? The power limit removes the need for lots of RF exposure and other safety questions, and the VE stuff, but what about almost all the rest?

Ken Bessler wrote:

So how much pot did KE4TEW give Riley to get his license back?

Read below, if you can read.

TAMPA, FL: The FCC has requested that General class licensee James W. Dale, KE4TEW, retake the General class examination elements under the supervision of FCC personnel by July 30, 1999, or his license will be canceled.

At:

http://www.arrl.org/news/stories/1999/06/23/1/

TAMPA, FL [UPDATE]: The FCC notified James W. Dale, formerly KE4TEW, on August 3, 1999, canceling his General Amateur Radio license. The FCC had notified Dale on June 18, 1999, requiring him to retake his Amateur Radio examinations prior to July 30, 1999, under the supervision of FCC personnel in Tampa, Florida. According to FCC Attorney Riley Hollingsworth, K4ZDH, Dale failed to appear for reexamination, and his license was consequently canceled. Hollingsworth also warned Dale about continued operation of radio transmitting equipment.

At:
http://www.arrl.org/news/stories/1999/08/11/2/

Now, the "Miracle"

TAMPA, FL [UPDATE]: The FCC notified General licensee James W. Dale, KE4TEW, on September 28, 1999, that it was reinstating his Amateur Radio license with a short-term renewal date of September 29, 2000. Dale had failed to appear for reexamination after being notified by the FCC on June 18 to retake his Amateur Radio examinations prior to July 30, and his license was canceled on August 3, 1999. FCC Legal Adviser for Enforcement Riley Hollingsworth said the FCC has "since reviewed and accepted" Dale's detailed response and his explanation for failing to appear for retesting. Hollingsworth said the FCC was reinstating Dale's General license "pursuant to our agreement with you," but the FCC letter did not elaborate. Hollingsworth told Dale that if there are "no valid complaints about your use of Amateur Radio" over the next year, he may apply for a routine license renewal at the end of his current term.

At:
http://www.arrl.org/news/stories/1999/10/07/5/

Thus, KE4TEW, a convicted felon who jammed HF frequencies for years while id'ing, did not show up for a retest. Why? That's easy. He paid for his license. Then Riley does what he has done with the others who did not show up, he cancels the license. Good Riddance to this nuisance. Then almost two months later, Riley reinstates the license, WITHOUT THE ORIGINAL RETEST!!!! "Pursuant to our agreement with you" What the hell does that mean?? In other words, even though we know you are not qualified to be on the air, go ahead anyway???? What the hell kind of enforcement is this? It's biased enforcement, Riley's trademark style. So what was the agreement? Harass people on the Internet 24/7? Continue to jam the Liberty Net? Is he paying Riley a monthly fee to be on Amateur Radio? Riley's little slush fund. Did TEW give Riley a large amount of illicit drugs? What was it that made Riley reinstate this known drug dealers ticket that was fraudulent in the first place? Maybe Riley does Rita on weekends?

If you are wondering what kind of ethics violation Riley committed in granting TEW's ticket back under the table contact the Inspector General of the FCC as several already have. Ask Mr. Feaster to add your name to the ethics probe of the KE4TEW case. Then one day you too will know how to bribe an FCC official and make him make unethical decisions on your behalf.

One to a customer. If you can't "get it" in 10 years, then you probably
aren't going to be able to "get it" in 20 or 30 years.

BTW, drivers license permits are not renewable here, although you can retest
for a new one.

Try to sell *that* to the amateur community (including the FCC)!!

> The FCC didn't
> "stick to their guns" on the original Novice concept, and I lay that at the
> feet of the "entitlement" mentality of the 60s-70s.

I think you're just toying with us, Hans...;-)

FCC "stuck to their guns" for almost 25 years with the "no renewal, no
retake" Novice.

As for "entitlement mentality of the 60s-70s", those were the times
that gave us incentive licensing and significantly raised the
requirements (both code and written) for a full-privs license. In fact
the written requirements were raised more than the code....

But that's all ancient history. The main question is how you're gonna
sell the "up or out" concept to FCC and the amateur community.

>
> > And the cry will arise: "why are active hams with clean records being

> if we lose those learners-permit holders.

Those who don't want to see them leave the air and the ARS will care.
And if there are enough of them, they may simply outvote everyone
else.
>
> > Since the only difference between your two proposed classes

I did and you did. Which means FCC will have to keep the existing
database going. It also sets up the unique situation where a new ham
faces a challenge/requirement that no existing ham has to face.
Somebody may holler 'discrimination'....
>

> a good time, and it's been nice meeting you. Sorry this ham radio thing
> wasn't your bag." They're not "bad people" or "quitters" --- they just
> don't have the same interest in hobbies that you and I do.

OK, fine. The problem is, how you gonna get those million people to
take the look? We've had an easy-to-get nocodetest ham license for
12-1/2 years now, the old Novice for half a century, and we've gotten
maybe 30,000 new hams per year tops. (check AH0A stats on new
licenses).

In ten years that works out to maybe 300,000 "taking a look", not 1,000,000. If your 20% rate is correct, we'll see drastic reductions in the size of the ARS in the USA 10 years down the road as LPs expire. Is that a good thing?

Most of all, how you gonna sell the idea to the FCC and the rest of ham radio?

Perhaps you should send the ideas directly to FCC and see if you can get an RM number for it. I know you used it in a comment, but why not go for the RM? One more on top of the existing 14 won't hurt anything.

Somebody is always hollering 'discrimination' --- BFD. Life's a bitch, and then you die and they give all your toys away.

It's clear that you don't like my "up or out" proposal, and it's clear that I'll not persuade you to like it, and it's **really** certain that you'll not persuade me to change it. Now all we're left doing is picking the fly shit out of the pepper pot. I don't play that non-productive game. Have a nice day.

And I count that as one of largest mistakes the FCC ever made, even worse than dis-incentive licensing in 1968.

In my mind the non-renewable nature of the Novice license was the very reason ham radio still survives today. People were given an almost-free pass into the hobby, and they flocked in by the droves. If they liked it, they were forced to qualify for a real license or hit the bricks. I know that notion spins you up big time, something about "we can't afford to lose them", but frankly my dear, we never had them in the first place if they couldn't manage to take the next baby step up to General/Conditional/Technician. (When Technician meant "technician", not "beginner".)

Yeah that's the same "victim" argument some of my friends made when I went to college and they didn't. But I sacrificed to go to college. My parents didn't pay for it.

I worked a minimum wage job, lived at home, did not buy a car, did not buy records and so on. I put the money aside and did without so I could go to college. So that "circumstances" argument is pretty shakey. And don't try the "pregnant and alone teenager" argument either. I knew some of them in college and they made it too.

People allow themselves to fail and become victims of circumstance.

Economies, markets and jobs are always changing. This is nothing new. A lot of us have had to change with them, rebuild our skills and move to not only different jobs but different locations in the country to stay employed.

I've faced and made some hard economic choices in my life and did not and do not expect the government to fix it for me or the world to stay static. Security is and always has been an illusion. I've faced that a long time ago and dealt with it.

> Construction jobs around here suck, unless you hold "paper" you are

So if they suck, why don't the people go elsewhere. People have traditionally followed the job markets to get ahead. You can't make the market come to you. That is an unrealistic fairy tail and illusion.

By the way, check the tax tables. Someone making $8 per hour or under and has a family probably won't be paying any significant income taxes unless their spouse is also working but even then their tax burden is still minimal.

Well I go by what the auto industry journals said at the time since they
were circulated around the workplace. I give more credence to those
analysts than I would my personal opinions as they had the actual data.

Doesn't matter whether I like it or not. I got my Extra 33 years ago and there hasn't been a day since then that I couldn't pass the required tests to get another one if that were required.

I'm actually trying to help you refine it, Hans. Because the problem isn't hams like me, who would gladly retest every coupla years just to show we still got it. The problem is how you're gonna sell the idea to FCC and the rest of the ARS.

>Have a
>nice day.

You too, Hans. And think about sending that proposal to FCC for an RM number. Who knows - it might gain widespread support and I'd be dead wrong about it.

How were the changes in 1968 a "dis-incentive"?

>
>In my mind the non-renewable nature of the Novice license was the very
>reason ham radio still survives today.

How so? That feature went away a quarter century ago.

>People were given an almost-free
>pass into the hobby, and they flocked in by the droves.

So 5 wpm code is an "almost-free pass"? I agree! ;-)

oh wait - back in those days we had to send *and* receive....

Plus a 25 question written that was mostly about the regs.

As for the droves, back in those days the number of Novices was about 15,000-18,000 per year.

>If they liked it,
>they were forced to qualify for a real license or hit the bricks.

You mean the Novice wasn't a real license? If so, then those Novices weren't real hams?

> I know
>that notion spins you up big time, something about "we can't afford to lose
>them", but frankly my dear, we never had them in the first place if they
>couldn't manage to take the next baby step up to

>"beginner".)

I had one of those 2 year one-shot Novices. I got my Advanced (ahem) less than a year after passing the Novice. I was 14. Yer preachin' to the choir, Hans.

But ya still haven't told us how to sell your idea to the FCC and the rest of the ARS.

>
>One to a customer.

Understood.

>If you can't "get it" in 10 years, then you probably
>aren't going to be able to "get it" in 20 or 30 years.

All depends what's going on in those 10 years.

I know plenty of hams who were quite active until something significant happened in their lives like military service, a major illness in the family, marriage, divorce, children, relocation, new career, etc. Then, in accordance with "The Amateur Is Balanced", they put amateur radio on hold for anywhere from months to decades. Then, when their lives permitted, they came back in a big way. A few let their licenses lapse, but most kept renewing and modifying.

Case in point: Amateur licensed in high school, got a bachelor's degree, worked a year or two, then decided to become a doctor. For the next 7 years his life was med school/residency/fellowship. Not a lot of time in there for ham radio, but he had an HT and kept in touch. And now he's an M.D. and hamming in a big way.

His 10 years as a ham hit somewhere towards the end of medical school. Under today's rules, he just renewed and kept on going. Under your proposal, he would have lost his license and had to go all the way to Extra in one go if he ever wanted to be a ham again.

Is that really what's best for the ARS?

>BTW, drivers license permits are not renewable here, although you can retest
>for a new one.

Same deal here, AFAIK. So why not the same deal for hams?

I don't know if I was happier then, but I was having a blast.

As for a mid-life crisis, remember you worked hard for it, you deserve
it, and no one is going to deprive you of it! 8^)

I hear the MLC car of choice is a BMW Z3. Almost makes me want to have
one so I can pick one up.

Didn't know we were running a seniority contest here, but if we are you lose
by 7 years.

> ...and there hasn't been a day since then that I couldn't pass
> the required tests to get another one if that were required.

The point being? I'd expect that's true of most licensees.

> I'm actually trying to help you refine it, Hans.

It's already refined, thank you very much.

> The problem is how you're gonna sell the idea to FCC and the rest of the
> ARS.

At least it's a problem in **your** mind, but you don't count. The FCC
counts.

> And think about sending that proposal to FCC for an RM number.
> Who knows - it might gain widespread support and I'd be dead wrong about
it.

You are dead wrong about it, and it doesn't need "widespread support", just
the support of FCC.

Then they're bums, pure and simple - not "union bums".

As for "a job a kid could do", rest assured that if some employers could use
child labor, they would - and pay 'em less than minimum wage, too.

>> The basic concept that Dwight is talking about is a "living wage" -
>> meaning jobs that pay enough in wages and benefits to permit people to

>you to work for as little as possible, but charge ya up the ying-yang for
>everything. Guess that is the American way eh?

Supply and demand. Obviously there's no labor shortage there, so the employers
control the wages. The answer is to vote with your feet.

>> The "living wage" concept and reality are largely a result of
>> organized labor unions leveling the playing field a bit by unifying
>> the many workers in negotiating with the relatively few employees. The

>more people to replace them, that will ACTUALLY WORK, and still allow for
>the rest of the department to get a $1.00 per hour raise, and STILL SAVE
>SOME MONEY on overall department wages.

How?

If there are 3 people slacking, they could probably be replaced by 1 or 2 good
workers, not 4 or 5.

>The math has been figured out here
>on this and it is true....
>
>The other answer is for employers to finally see the value in helping the

>recieved.

Both my present and former employers do that.

>Even though people want to believe otherwise, there are more and more people
>having to, and trying to survive on what were supposed to be considered
>"high school kid" jobs.

Why?

Do they refuse to relocate?
Do they lack education and other qualifications?

One thing *has* changed in the past 30-odd years. There used to be a lot of
jobs that a kid with a high-school diploma could get, that would lead up the
ladder to better paying jobs. Today those jobs take a college degree. Call it
education inflation or whatever, it's a fact.

In a recent post where I pointed out that Len wants amateur radio to
essentially become a multiband high power version of cb, he denied wanting no
license at all. Then he railed about multiple license classes. Logical
conclusion (if one can ever apply logic to his posts here) is that he wants one
class of license.

Look up the post - couple days ago, aimed at me, something about needing
multiple classes of license for egos or some tripe like that.

Hehe, that brings us to one of the reasons that U****S got started in the first place. The employers *were* using children, *were* paying them almost nothing, and abusing them most terribly.

So the people who argue that raising the minimum wage is putting young people out of work do know what they are talking about!

As of 6 PM EST on 11 November 2003, the number of ECFS
documents on public view are:

RM-10805: 229
RM-10806: 214
RM-10807: 174
RM-10808: 191
RM-10809: 179
RM-10810: 178
RM-10811: 956 Total: 2,121 (10811 has 45.1% of total)

RM-10781: 321
RM-10782: 271
RM-10783: 276
RM-10784: 254
RM-10785: 256
RM-10786: 423
RM-10787: 674 Total 2,475 (10787 has 27.2% of total)

Grand total: 4,596 documents for all 14 petitions.

The Public Notice declaring 10781 through 10787 as open for
comments for 30 days was posted on 29 August 2003.

The Public Notice declaring 10805 through 10811 as open for
comments for 30 days was posted on 8 October 2003.

Docket 03-104 (Broadband over Power Lines) is still open for
comments and can be reached under the Consumer page at the
FCC for manually typed-in commentary rather than go to the ECFS
upload page. 03-104 had 5,086 comments on record.

FCC 03-104, the Docket on Broadband over Power Lines has 5,081
documents on record as of close of ECFS on 7 November 2003.

> behind your opinions...

You and I both knew you couldn't do it, Kim. The information it not that easily available and it would take considerable effort for consumers to research the products they purchase each day, week, or year. In spite of your claims otherwise, you don't do it. I certainly don't do it. And I don't know anyone who does. But someone has to have some responsibility for which products are sold and effects on the overall economy. Since it is beyond the abilities of the average consumer, the burden automatically falls on business, the government, and the courts.

> makes me want to have one so I can pick one up.

Anything white and expensive will do the job ("cute" is a bonus). I don't know why, but women seem to love white vehicles. I suspect it has something to do with the reason why women who would never do so elsewhere so easily shed their cloths around water. Of course, this is clearly not the reason I drive a white vehicle today - white is just a safer color on the road. ;-)

You can put me in that catagory from about 1961 until 1990 or so. I always renewed the license, sometimes subscribed and/or bought CG or QST, but was not on the air at all.

(much bullshit snipped)

This crap is over 4+ years old.

Why are some ham op's so often obsessed with nonsense
that happened years (..and in some cases, decades!) ago
on the stupid radio? 14.313 is a perfect example. There's more
than a few clowns on there still outgassing about the nonsense
that took place on there during the 1990's!

Really makes you wonder if a prerequisite for operating
on parts of 20 or 75 Meters for some, is a diagnosis of
a mental illness.

jeezus h christ, give it a rest and get a life
or just go outside and sniff the fresh air.

The difference really isn't that unusual, Jim. You're obviously forgetting state minimum wage laws which can add to the federal minimum wage. Perhaps Mike lived in a state with it's own minimum wage laws at the time. As you probably know, state minimum wage laws were a growing trend in the 70's, but that growth has pretty much died out over the years. In fact, I'm not even sure any state still has an active minimum wage law today.

> (snip) Personal bankruptcies are going up, too.
>
> And that's part of what Dwight would reform! (lack
> of caps on how much debt a person can get into)

Hey, now wait a minute, Jim. I realize what you meant. But, before you confuse people, watch how you word that. I'm not running for political office, so I'm not likely to reform anything. Anyway, I do think this is one of the areas that has to be addressed in any serious reform effort. It is amazing how much debt is floating around out there. I see college students who have not worked a day in their life graduating with debts exceeding twenty, thirty, and even forty, thousand dollars (student and personal loans). I see people buying homes and cars that are far beyond what they can reasonably afford on their incomes. I've seen reports of average credit card debts exceeding $8,000 today. Clearly, something has to be done to reel in this madness. A cap on the percentage of a person's income that can be used to establish monthly payments for all loans seems logical (and the least intrusive) to me.

All of which are essentially "price" issues because you wind up
paying, one way or another.

> Suppliers with a "track record" are generally favored over "new guys", but
> new guys who can demonstrate "value added" (which can be a host of things)
> will certainly be given some business to prove their case.

Plus it keeps you from becoming totally dependent on one supplier.

Sounds like a very reasonable approach. And if a supplier were
deficient in those areas, or tried to hide things, I bet your company
wouldn't do business with them - even if it meant paying more,
elsewhere.

> Were we a huge conglomerate like General Motors or IBM, I'm sure

Agreed. I had to put real work into making sure all three of my daughters had technical degrees of various flavors for exactly the reason you cite and I'm resting much easier now than I would be if I hadn't leaned on 'em about getting degrees. Leaned hard in one case but I prevailed. It's been statistically obvious for years that "significant others" amongst those in their reproductive years have a propensity for coming and going seemingly at will vs. "the good old days". Two of my daughters dragged the wrong pieces of male sludge home and when push came to shove it got down to "I don't need you, hit the road, I'm taking my name back" and they went back into their profe$$ions.

Me too. All this roundabout bravo sierra could be bypassed if there was a ballot sent to all approx. 700,000 U.S. licensed hams. As long as quorum is met, it's on! This concept (Democracy) frightens the bejesus out of many folks who claim to speak for those not yet licensed.

But that's an empty argument. Get licensed and vote, tah dah! The big bad "barrier" does not preclude anyone from getting their no-code Tech ticket and executing a vote.

Simply announce a "record date" by which one must be licensed (To give those "yet to be licensed a fair shot at a voice in the process.) and send a ballot out to all those licensed "of record." Makes too much sense and requires some effort. IOW, against the contemporary trend.

>the support of FCC.
>
I doubt FCC will enact such a radical change without widespread support in the amateur radio community. So far I haven't seen a single rrapper in favor of it. But FCC may be different.

Note that if FCC did enact your LP idea, they'd have to maintain a permanent database of everyone who ever held an LP license, to make sure they didn't get another one. Extra admin work for FCC - to solve what problem?

Good luck on selling your ideas to FCC

Not everyone likes veterans or thinks they are due any particular
thanks.

Concerning the "Bonus Army" of 1932, where veterans of The War to End
All Wars (1917/1918) were due a bonus in 1945, but wanted payment
early because they lost their homes in the Great Depression, Franklin
Roosevelt is to have said:

In the end, some money was paid to veterans but not without further
difficulties. Within a year of the Bonus Army Incident, President
Roosevelt imposed the Economy Act of 1933 which cut veterans
disability allowances by 25%. In the effort to cut federal expenses,
veterans were viewed as having inordinate special status over
civilians. During the 1932 election campaign, he had publicly
proclaimed: "No one [merely] because he wore a uniform must therefore
be placed in a special class of beneficiaries over and above all other
citizens. The fact of wearing a uniform does not mean that he can
demand and receive from his government a benefit which no other
citizen receives."

Read all about it at:

http://www.islandnet.com/~citizenx/bonus.html

Steve, everyone makes mistakes, but the Armistice goof got me thinking about the veterans of WWI, and what happened to them during the Great Depression. Like any other citizen, they lost their jobs, lost their homes, their businesses. But they had earned a bonus for their sacrifices in Europe, payable in 1945.

They marched on Washington to pressure congress to pay them now, not later.

Here's some links and snips:

http://college.hmco.com/history/readerscomp/gahff/html/ff_022600_bonusarmy.htm

[Bonus Army
a group of unemployed World War I veterans who demonstrated during the Great Depression. The Bonus Law of 1924 had given every veteran a certificate payable in 1945, but the veterans wanted the bonus immediately. In June 1932, about 15,000 of them and their families marched on Washington, D.C., in a futile effort to pressure the Senate into passing a bill to grant immediate payments. President Herbert Hoover called upon Gen. Douglas MacArthur and federal troops to disperse the Bonus Army and drive them out of the capital. The use of armed troops against unarmed men, women, and children shocked the nation.]

http://www.islandnet.com/~citizenx/bonus.html

[Within a year of the Bonus Army Incident, President Roosevelt imposed the Economy Act of 1933 which cut veterans disability allowances by 25%. In the effort to cut federal expenses, veterans were viewed as having inordinate special status over civilians. During the 1932 election campaign, he had publicly proclaimed: "No one [merely] because he wore a uniform must therefore be placed in a special class of beneficiaries over and above all other citizens. The fact of wearing a uniform does not mean that he can demand and receive from his government a benefit which no other citizen receives."]

http://www.msys.net/cress/ballots2/bonus.htm

[In the summer of 1932 the Commander in Chief of the Armed Forces ordered the U.S. Army into action--to attack the veterans of the U.S. Army. General Douglas MacArthur, Colonel Dwight D. Eisenhower, and Major George S. Patton led the mounted soldiers, who wielded billy clubs and tear gas canisters. When it was all over the veterans' shanties and tents lay in smoldering piles. Proud veterans of World War I were driven from the nation's capital. "We were heroes in 1917," said one veteran bitterly, "but we're bums now."]

http://www.lewrockwell.com/elkins/elkins9.html

[The Bonus Army
by Jeff Elkins

June 18, 1878

CHAP. 263 ï¿½ An act making appropriations for the support of the Army
for the fiscal year ending June thirtieth, eighteen hundred and
seventy-nine, and for other purposes.

SEC. 15. From and after the passage of this act it shall not be lawful
to employ any part of the Army of the United States, as a posse
comitatus, or otherwise, for the purpose of executing the lawsï¿½

Mostly forgotten today, the Bonus March incident of 1932 provided one
of the more instructive lessons in the naked power of the State and
just how meaningless the State views its laws and contracts with
citizens.]

http://members.aol.com/vetsofamer/bonus2.htm

http://www.soundprint.org/radio/display_show/ID/228/name/Bonus+Army+March

[In 1932, in the depths of the Depression, thousands of hungry and
disgruntled veterans of WW I marched on Washington, D.C. demanding
that Congress pay them the bonus for their military service that had
been promised years before. Banding together, unemployed Oregon
cannery workers marched with Pennsylvania coal miners and Alabama
cotton pickers, as more than 20 thousand "bonus marchers" participated
in the biggest rally to date in the nation's capital. And they stayed
for weeks, setting up tent cities, living in cardboard shanties, and
shaking the nerves of President Hoover. Find out how they played a
role in defeating Hoover in the fall election, and improving the
government's treatment of veterans after WW II.]

Dwight, are you calling me a liar? Yes, I have done it, and yes it is not
all that difficult to do. Anyone on the internet has the capability and
it's not difficult at all. Try these sites, since you're apparently too
damned lazy to take the effort. You will have to add the typical front end
to each of these addresses:

ethicalconsumer.org (check out the research link)
epa.gov/tri (toxic release inventory)
greenchoices.org (has some links to fairly every-day things we buy)
corpgov.net (good primer on the topic)

I might also remind you of something, truly stupid I might add, that you
said above: "since it is beyond the abilities of the average consumer, the
burden automatically falls on business, the government, and the courts."
This in a follow-up to a brilliant observation you made: "...someone has to
have some responsibility for which products are sold and the effects on the
overall economy."

For cryin' out loud, Dwight, who the phucking (HansTM) hell do you think is going to keep "business, the government, and the courts" responsible?

And, let me further make a suggestion: before *you* make yourself look any more stupid, get some education on the topic we've been discussing in this thread. Jim and Dee are far better at me than history and perspective and you've repeatedly negated their points of view--even going so far as to say [paraphrasing here] that you don't have to have facts because we are "just debating." Go "just debate" with the Kindergartners...I take this subject far more seriously.

>
But cars also last longer - at least the ones I've dealt with.

For example, my first car was a 1974 Ford. Actually had two of them in the family, same model, same year. Needed a complete tuneup (points, plugs, condenser, rotor, timing) every 6 months to run anywhere close to right. Neither one made it to 100,000 miles or 10 years due to rust, even though I kept fixing them. In fact, by 8 years of age/85,000 miles they were both junkers.

Fast forward to 1991. Honda sedan. Put over 100K on it in 10 years. Tuneups were much less frequent and much less involved. Better gas mileage and performance than the Fords. and when it was sold it was not only running great but had zero rust.

1994 Saturn, bought used in 1997 with 27K on it, is over 82K now, running great as it approaches its 10th birthday.

Adjusted for inflation, the newer cars cost more to buy - but much less to operate.

Two true stories:
Duct tape used to "seal" a leaking radiator hose when I was traveling around in Summertime down here in Texas. Kept telling myself I'd buy another hose and get it on soon...it was still on through the Winter and into Spring, when I finally broke down (not the car) and bought a new hose.

Electrical tape: on the way up to NY for a vacation, on the East side of Dallas (still very easy to get back home to Ft Worth--mind you), the car's carbeurator housing starts leaking and float starts sticking. I remember using teflon plumbing tape when I make plumbing repairs around the house and convince my then-husband to use electrical tape around the threads of the fuel line connection to the carbeurator. He thinks I am absolutely friggin' out of my mind. We removed the float valve, I applied the electrical tape very carefully (like only a woman could do)--even making sure to back it off from the first couple of rounds of threading so that the gasoline won't melt the electrical tape and really cause a problem. Total repair took about a half-hour and we happily drove the rest of the way to CT and NY. When we got to CT, my trucker brother-in-law lifted the hood of the car as my hubby was explaining what I made him do. My bil is all smiling and grinning and shaking his head, and he looks at my hubby and says, "if it'd been one of us that had come with that idea, it never would've worked." ROFLMAO!!!

When we got to NY, my dad used some kind of naval glue he'd been carrying around for years. The car ran for several more years with no float valve--it was the rear end that finally went on that one...

Yep, duct tape and electrical tape. Gotta have it.

Hey, check this out:

ducttapefashion.com

And, guaranteed blast here:

ducttapeguys.com (my favorite is the "Stuck in Traffic Entries" on the
dropdown link)

Brian, my boy, don't look now but old Franklin, and Eleanor who probably put those words in his mouth, since Franklin is widely reckoned to have been more than just a little bit pussy-whipped, are both dead and buried and rotted now these almost 60 years ago. Do you suggest that these views should be endorsed by the current Commander in Chief?

Ah, but I think you missed the best part of the whole message, Jim. Every action I described has a tendency to reduce my overall cost of goods sold, either in reducing fixed factory costs, in reduced variable costs, in higher inventory turns, in shorter manufacturing cycles, in better cash flow, or in reduced headcount. All of that DOES drop directly to my bottom line.

Don't look now, but accounting is one of the "back office" functions which most manufacturing companies have outsourced to India and similar places a ***long*** time ago.

However as noted in later in this same post for cars (now snipped), people now demand more features in that house and more room in that house that was common in 1950. So it's an apples to oranges comparison.

2551. new jammer on 146.640 tampa bay florida

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-13 05:13:15 UTC
From: hamradioman2000@yahoo.com
Message-ID: <e95066a4.0311122113.54359624@posting.google.com>
Source record: 82227

the ron wright N9EE 146.640 repeater in tampa bay florida is home to a new jammer, he proudly says his call KG4LEG AKA coy roy on CB

www.QRZ.com reports him to be
Roy A Lepelletier
1703 Cypress Avenue
Belleair FL 33756
USA

roy will pick fights with other amateurs.
roy will key up and cary on an imaginary "full duplex" conversation with suposid CB'ers on channel 35.
he claims he has lots of friends on cb that are listening to him on 146.640 while they are talking back to him on CB ch 35. (that is total BS) hes just doing it to agitate the normal folk on 640. several people heard him keying up on CB 35 while claiming to talk full duplex on ham, wich would not be effective to talk to cbers anyway.
(basically roy is lieing about his intentions.)
he also will ramble on and on to himself that there are people making death threats against him. he also claims a guy named dickie or dicky hendricson or hendrickson is a child molester, and goes into deatail over the air what this dicky had suposidly done to childeren (fairly graphic and not apropriate)
in other times he will say this hendricson is his friend. one amateur don KG4COQ tried to nicely get roy to change to another repeater and wanted to talk to roy about the guys that roy is talking about on that other repeater. roy turns it all around and says roy doesnot need any help with these people that are after him, but if anyone wanted to help, they could send roy cash. (roy said that several times)
when don continued nicely to try to get roy to change repeaters, roy twisted around this words and accused the don of wanting to meet up with him to start a fight, but don didnot say anything like that, then roy accused don of wanting to meet up with roy for some homosexual encounter, wich again don NEVER said anything about. roy has also commented about having been in the marines out in california, something about a "jar head" flight wing kind of position, but didnot go into detail about why hes out. he claims hes retired and wants to stay that way. roy also was throwing out the "im gonna sue you" to alot of people also. he was saying people were saying bad things when they wernt. new people would get on the repeater, and he would initiate a conversation with them, but immideatly jump into a platform about how hes on cb and running 200 watts, just like everyone else does on CB. he says things over and over. if everyone leaves him alone, he would usually key up every minite or 2 making a stupid CB comment or CB slang.

thias guy is a head case, hes off his medication and someone needs to
get him to the mental hospital :)

"Is to have said?" I would think that Roosevelt has pretty well said what he is going to, by now!

Also: It's not amazing that Roosevelt would short-change veterans. When the S.F. dockworkers went on strike during WW2, refusing to load ammo and supplies for our troops, Roosevelt ordered the shipping companies to cave to the union demands instead of having a few of the union ringleaders imprisoned, beaten or shot, as any reasonable person would do with socialist traitors who attempt to extort and undermine the country during a time of war.

Thats assuming a certain age too. I have sacraficed as well, but do the math, at 5-7 bucks an hour, trying to support your self, in the minimal of settings, (housing, transportation etc.) and also have funds to pay for college does not always work as conviently as you prescribe. I have been working on my degree since 1989, and am almost done. Unfortunately you live in some type of world where kids are allowed to live with the parents above the age of 18. Myself, as well as many others do not have that luxury.

> I worked a minimum wage job, lived at home, did not buy a car, did not buy

Again, not all people have the luxury of living off the parents beyond graduation of high school. To expect every person to have been in the exact same circumstances as you is also pretty shakey as well. As far as the pregnant teenager issue, I wasn't gonna mention that one either.

>
> People allow themselves to fail and become victims of circumstance.

Following that logic, then the people IN the WTC buildings are also as well then......

employed.

Yep..... no problem with that statement, as many of us do. You just must
seem to think that there is an abundance of those wonderful high paying jobs
out there, when that is not the case. Overall, the economy is moving
towards the "basic service" type of jobs as opposed to the manufacturing
jobs of the past.

Construction is not my field, but know others that work in that field.

>
> By the way, check the tax tables. Someone making $8 per hour or under and

Yeah, if they are supporting a family that may be true, but it is still taking from the paycheck till the following April. Also, if there is any form of a miracle that this job gives any benefits like health, that is also subtracted from the takehome.

If you are so damned good, and have a great grip on employment issues, then you oughta come up this way. You could make a fortune helping others, working on a finders fee! LOL

Also, get it out of your head that most of what I have been responding to in this is directly an example of what I am dealing with personally as your attacks indicate, but observations of what is going on around here.

Hey, I hate to interrupt the historical and political discussion, but I have a Ham Radio - related question.

Sorry to abruptly drift back on-topic like this, but what is the latest poop on the BPL rollout in Virginia? There has been more than enough time for something to have happened... So what happened?

I didn't think Jim would every go that "low" but a kid to me is someone
almost in the college years! (somewhere between 18-21..... hi hi) Never
would have implied child labor (under 14.)

If they are bums, and part of a union, then the logic displayed here by
certain others dictates they are by definition then, "union bums."
I don't get any union protection whatsoever... why should they?

>

Hmmm, did I say child labor or kids..... kids in reference to me was
referring to the teeny boppers up til around somewhere between 18-21.

Yeah..... true, but so far I have not seen anything around here like some type of "roommate arranger" or anything like that. In fact I am almost hesitant to roommate with anyone I do not know almost as well as I know family members. When living in the crotch of Michigan, otherwise known as Flint, I lost everything to my name because of one of the two roommates had some outstanding debt to some shady characters, that I wasn't even aware of because on the surface the person seemed as credible as most anyone in this newsgroup. Lost all my photography gear, computer, SCUBA gear, and DJ equipment and music collection at the time, to a tune of almost $10,000 worth of stuff.

And as another posted in this thread somewhere, it is not always feasable to "mooch off the parents" for alot of people, although some are fortunate enough to do so.

Again, that is not always feasable as well. My last move cost almost $1,000
that I have recently paid off to a friend who was generous enough to loan me
the money to do so. (fortunately he allowed me to stretch the payments
out.)

good
> workers, not 4 or 5.

Yes, but the 3 people are also by raises and cost of living allowances (COLA's) are making almost 15 bucks per hour, (45 dollars per hour total) and in the same positions, and same level of responsibility, but just have been around quite a while and never moved anywhere within the department..

Now hiring at least four people at say 8 bucks an hour to start, (higher than they normally do right now) makes 32 dollars an hour, plus giving the other 6 people a dollar an hour raise which would bring all employees up to at least 8 dollars or more per hour, which now gives us a total of 38 dollars an hour cost for the four new people and giving the existing ones a raise, which would boost the moral as well. Still leaves a savings of about 7 bucks per hour, or they could spend 1 dollar more per hour and have a total of five people and use up that seven an hour savings. That would give us 5 actually working employees instead of 3 that don't do much.

>

> Both my present and former employers do that.

Not the majority around here. There are some that are intelligent enough to see the value in training and continuing education. I myself pursue at least 120-150 hours each year in continuing education credits.

>

Unless it is something new, I have yet to see any organization, public or private that assists with moving/relocation costs. Someone making less than 10 bucks per hour pre-tax/pre-benefit cannot afford to pick up and move across the country that easy.

> Do they lack education and other qualifications?

That is a possibility, but I cannot speak for others. There is the "who you know" factor as well. Many unqualified people get those jobs where a qualified person didn't, merely by who they knew. (or what butt they kissed)

That is true 100%. I have been working on my degree since 1989, as finances allow.

Yep, sure have and did! And, along with that, customer service/support is "shipped"overseas quite often. When you call the "local" help group for a service you're purchasing, or product, it's likely you're talking to someone in the Phillipines.

> Dee D. Flint, N8UZE
>

Yeah, I am glad you re-brought that back up, Dee. I have often wondered how "close" a comparison it is when we start comparing the wage:cost of living ratio from yesteryears and today. Because, we do have "bigger, better" ideas in our products today.

I mean, today in a newly built home, and "upgrade" package is turning one of the common areas into a media room! And, who would have ever thought that we'd be able to buy a vehicle that would have an on-screen map (OK, it's called GPS...grin), or even that we'd be able to push a button and talk to someone in an office who can remember to buy our spouse the anniversary flowers?!

I think if we stripped down, maybe from a perspective of percentage (?), dollar for dollar we are not that much more "inflated" than we were years ago. OK, a loaf of bread was 20 cents and today it's a buck fifty. But the 20 cents is probably near or equal to the same "earn" value as the buck fifty.

Well, anyway, economics have always fascinated me...but not enough to drive me to be able to understand it all :)

A neighbor tells me that the FCC has recently ruled that broadcast radio stations are now "legally" able to "say the F word" on the air, as long as it isn't sexual. Yeah, I know, go figure.

But, when I did a quick search on the FCC website, I found nothing of it. Anyone know of this...my thoughts are on what will happen in amateur radio now. The broadcast arena has always been the barometer of what people are allowed to say on the air, hasn't it?

> Dwight, are you calling me a liar? (snip)

Well, call it what you want, Kim. You told me that you're an informed consumer that routinely researches the products you buy. It seems to me that if one routinely researches products, the locations of sites with such information would be instantly familiar. But, when I then asked you for information about several products, you didn't offer the sites you supposedly use - you had to search the internet to find sites. By the way, the sites you finally did list certainly didn't dispute my claim that reliable info is not that easy for consumers to get (see next paragraph below).

> ethicalconsumer.org (check out the research link)
> epa.gov/tri (toxic release inventory)
> greenchoices.org (has some links to fairly every-day things we buy)
> corpgov.net (good primer on the topic)

Is this really where you get your information from, Kim? I stopped looking after seeing the prominent "Boycott Bush" link on the www.ethicalconsumer.org home page. If this site is at all typical of the others, these are sites pushing their own little agendas, not sources of accurate and reliable consumer information.

> For cryin' out loud, Dwight, who the phucking (HansTM) hell
> do you think is going to keep "business, the government, and
> the courts" responsible?

Well, isn't that just an astonishing revelation, Kim? Did you just now realize this entire discussion is all within the context of this country, it's people, and their system of government? That's what's going on in this thread, Kim - people discussing what they think their government should do.

Bright orange, huh? Interesting color choice. Anyway, didn't you notice the number of orange cones littering the highways around construction sites? I don't know if people just can't see them or they intentionally run over them. I worked at a truck rental place many years ago and a customer returned a truck one afternoon with an orange cone dangling under the front. When I asked him about it, he said it must have come from the construction site he went through up the road. Obviously, he wasn't even aware that he had run over it. Hopefully there was no worker standing near that cone. If so, he fell off before the truck got to our location. ;-)

2567. Important Research at TAPR

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-13 13:49:54 UTC
From: charlesb <n5pvl@sbcglobal.net>
Message-ID: <6_Lsb.8738$xt6.2194@newssvr29.news.prodigy.com>
Source record: 82243

According to the latest TAPR "Packet Status Register", thier quarterly newsletter, the folks at TAPR have discovered that they are adrift, with no purpose and direction to guide their activities. As is often the case, the "leadership" at TAPR were the last ones to acknowlege a situation that hams have been noticing and remarking upon for over a decade.

It appears the TAPR BoD put their heads together, discussed the question thoroughly, and discovered that they still had no idea as to what TAPR is supposed to be doing. At last they threw up thier hands and hired somebody to investigate - To try to determine what TAPR might be good for.

"Uh, TAPR does technical stuff." was the conclusion the investigator returned.

It is revealing that during the entire article describing the confusion and debate as to what TAPR might be good for and the "answer" thier investigator eventually turned up, the words "packet radio" were never even mentioned.

That's right; At no time did anybody in the TAPR organization or the investigator they hired mention the words "packet radio" while working to solve the mystery as to what TAPR might be good for. Those words also are lacking in the investigator's conclusion, "Uh, TAPR does technical stuff."

- So why do some people think of TAPR as a packet radio organization?

TAPR doesn't.

What outfits use accounting in India? no question that tech support has
in large part moved there.

Well if we cant compare houses to houses because houses to houses is
apples to oranges.............

C'mon, Dee - there has to be *some* sort of comparison that can be
made! If my comments about people paying 50 percent or more of their
take home pay to put a roof over their head compared to 14 percent way
back when are irrelevant, and if people doing 30 year mortgages vs 10 or
15 year mortgages are irrelevant, than I guess you are saying that
buying a house in 1950 is the exact equivalent of buying one in 2003?

......but it isn't because it's an apples to oranges comparison?

> "close" a comparison it is when we start comparing the wage:cost of living
> ratio from yesteryears and today. Because, we do have "bigger, better"
> ideas in our products today.

Sure - in fact, my current home (built 1950-51) is a case study in the
differences. I doubt anyone would build a house like mine new today in
a similar neighborhood, but a half-century ago it was a pretty
standard "little box made of ticky-tacky" design. And most of the
differences (more bathrooms, bigger, more feature-filled kitchen, AC
from the getgo) cost more than just simple square footage add-ons.

But if you strip away the features differences, the costs are still
more. When I bought the house in 1999, it was well maintained but
essentially unchanged from its original 1951 state (original heater,
kitchen remodeled but not upgraded, etc.) But its cost-to-buy and
cost-to-keep are a lot more now, even adjusted for inflation.
>
> I mean, today in a newly built home, and "upgrade" package is turning one of
> the common areas into a media room! And, who would have ever thought that

> called GPS...grin), or even that we'd be able to push a button and talk to
> someone in an office who can remember to buy our spouse the anniversary
> flowers?!

All of those things were predicted decades ago. Not in the exact form
they take today, but the same concepts. For example, I recall reading
in the early 1960s that we'd all have computer access "someday soon",
although it was usually presented that we'd all be connected to a
central mainframe (remember them?) instead of having our own PCs. Car
phones, "intelligent highways", all sorts of stuff.
>
> I think if we stripped down, maybe from a perspective of percentage (?),
> dollar for dollar we are not that much more "inflated" than we were years
> ago.

I disagree. Some things have gotten cheaper, others more expensive. It
all depends on the particular item - example, gasoline today is less
expensive (adjusted for inflation).

> OK, a loaf of bread was 20 cents and today it's a buck fifty. But the
> 20 cents is probably near or equal to the same "earn" value as the buck
> fifty.

My bread is 25 cents a loaf.
>
> Well, anyway, economics have always fascinated me...but not enough to drive
> me to be able to understand it all :)

And there are so many variables and unknowns! For example, look at the
tax situation. There's federal income tax - and social security tax,
and medicare tax, and state income tax in some places, and local wage
taxes, and sales taxes...And the deduction/withholding rules change so
that what used to be not much of a burden on the average person is now
a big chunk out of the paycheck.

> it isn't sexual. Yeah, I know, go figure.

I think it was in response to some rock star accepting an award and
saying it was "[expletive deleted]ing wonderful" or some such. FCC
said it wasn't a violation in that case. But if he'd said he was so
happy he wanted to [expletive deleted] the presenter, it would be a
violation.

Yeah, go figure.
>
> But, when I did a quick search on the FCC website, I found nothing of it.

Of course not. They're not gonna advertise it because then everybody
would be saying it.

> Anyone know of this...my thoughts are on what will happen in amateur radio
> now.

Nothing, I hope.

> The broadcast arena has always been the barometer of what people are
> allowed to say on the air, hasn't it?

Nope. FCC has completely different rules for different services. The
fact that somebody gets away with something in the broadcast services
doesn't mean it's OK in the ARS.

FCC regulates all electronic communications, not just radio waves.
Cable TV as well as broadcast TV, for example. Yet there are things
the cable folks can show that the broadcat folks can't. The thinking
is that people sign up for cable only if they want it, and it's a
private system, not the public airways. Broadcast TV is public
property. So it's like the difference between what's allowed in a
strip club and what's allowed on the street.

Between broadcasting and amatuer radio is the question of scheduling
and predictability. All broadcasters publish advance schedules, with
content warnings. So you can know what you're likely to see and hear
before tuning in to Howard Stern or the Victoria's Secret Fashion
Special. Not the case in amateur radio.

Why not, Dwight?

> I don't think a quality fan should
> be an esoteric item requiring a nation-wide search. Yet that is exactly the

That's today's reality, brought about by a number of factors such as
the willingness of people to buy cheap stuff.

> And this was only one example - I run into similar situations just
> about every day of the week. By the way, the fans are purchased locally

I think it's perfectly reasonable to expect them to do so! It's part
of life in a modern industrialized society with global trade.
>

> > Then they should not complain when the hardware store

> > degrades, unemployment rises, etc.
>
> Jim, short of setting up a dictatorship, you're never going to get even a
> significant portion of the 280 million people in this country to shop the
> way you want.

No dictatorship needed. Just education. Look at how Hans' company deals with suppliers - all those principles apply to individuals as well. Sure, we individuals aren't going to make detailed investigations of every product we buy, but we *can* become better educated about them and make better choices. Just like Hans' and many other companies do.

> Consumers in general have neither the business awareness or
> economic awareness to make those types of decisions on their own.

Then they need to learn. Just like our ancestors had to learn how to deal with their environment.

> And they
> also certainly don't have the time or money to fully research an industry
> each time they want to go shopping for something.

They don't have to. The govt. requires all sorts of labels on all sorts of items, which means all one needs to know is how to interpret those labels. Outfits like Consumer's Union do product testing so we don't have to. And the 'net gives us access to enormous amounts of information.

> Business darn well knows
> all that, which is exactly why they point to consumer spending as the main
> cause of a poor economy.

Do you think they're going to blame themselves?

> Doing so absolves business of any responsibility
> for that economic situation and instead places the entire nation's economic
> burden, and sole blame for a bad economy (and blame for the things you list
> above), on consumers alone.

I disagree. All businesses are regulated to some degree - many to a very high degree. And in many cases it's justified, on the basis of safety.

> Business has some responsibility in all this.
> Your argument gives them a free ride when it comes to that responsibility.

Not at all.

My point is that *everyone* has some responsibility in all this. Business, government, and customers are all part of it. Every purchase we make is "voting with our wallets". But some people don't want that

responsibility, because it takes some effort and it detracts from the perfect images we see in advertisements.

For example, it doesn't take a degree in nutrition to know that if someone eats 3000 calories a day and only burns off 2000 calories a day, they're going to gain weight and keep gaining it until something changes. And the required changes (eating less, eating differently, becoming more active) may not be 100% fun. In fact, they may be 0% fun.

And it doesn't take a degree in economics to know that if enough people stop going to Ma's Diner and instead patronize Taco Heaven, that Ma's is going to go out of business.

If you want a recent document with an outline of relative housing costs:

http://www.census.gov/hhes/www/housing/hsgaffrd/afford95/afford95.html

It shows over a recent time period what I have noted over a longer time period, which is that less people can afford to buy a modestly priced house. In 1995, it was 44 percent could not afford to do this, an increase from 40 percent in 1988.

Does FDR still talk to you?

That's very possible, but I was quoting someone elses research, so
have not verified that is what FDR actually said from a direct source.

But thanks for your interest.

Brian

Where is the control operator for the 146.640 repeater? If he was so concerned he should have taken
the machine off the air until this bozo is dealt with? Ultimately the owner/control operator is the
responsible person when it boils down to misbehavior on a machine. I say go unplug the damn thing,
it may cause problems for some but it will cure another. It will probally get rid of the CB Rambo.

I don't know about you guys down in Florida.
Thats ''yous guys'' for the transplanted hams.

My point being that you *can* find a house today that's comparable to
what was on the market 50 years ago, and doesn't have all the
bigger-better features. But it won't be a new house. And it will be
less affordable than it was 50 years ago because not only have
property values in many areas gone up faster than wages, but the fees
and other costs have risen disproportionately as well.

For example, in this township there's a 1% real estate transfer fee (tax), which is split equally between buyer and seller at closing. On a $250,000 house (the low end of the market), buyer and seller have to cough up $1,250 *each* just to make the township happy. And that tax is *not* deductible - and it's just one line item on the HUD-1 form.

End result is that a home buyer has to come up with a *lot* of cash up-front, as well as the mortgage, taxes, etc. each month.

Note that a "modestly priced house" is defined as one that is priced at 25% of the market range. IOW, the price where 25% of the houses in a given area are less expensive and 75% are more expensive. That's not a mansion!

> In 1995, it was 44 percent could not afford to do this, an
> increase from 40 percent in 1988.

Exactly. Note also that even large decreases in the interest rates did not help a lot. And that the affordability analyses used involved things like 5% down payments.

One of the smartest/luckiest things I ever did was to buy a house at an early age (24) and kept my moves down to 2 in the years since then.

I didn't miss it, but perhaps I wasn't clear about my appreciation of
it. I wrote about how those policies were all "price" policies because
they worked to reduce the true cost of things bought. (If you have to
spend a nickel to inspect every 10 cent widget you buy, it's actually
cheaper to buy a 12 cent widget that doesn't need incoming
inspection). Etc.

> Every
> action I described has a tendency to reduce my overall cost of goods sold,
> either in reducing fixed factory costs, in reduced variable costs, in
> higher inventory turns, in shorter manufacturing cycles, in better cash
> flow, or in reduced headcount. All of that DOES drop directly to my bottom
> line.

Not every action! The ethical concerns you mentioned would tend to
raise it, if:

1) you spend money to check out suppliers
2) you would refuse a lower priced supplier on ethical grounds alone -
even if the supplier wasn't breaking any laws.
3) you spend more money to buy from local and minority/woman owned
companies, etc.

Of course all three can be looked upon as long-term investments that
will ultimately benefit the bottom line 'someday'. Much better than
taking a short-term view that ultimately winds up costing more in the
long term.

And I agree with all those actions 100%.

Not really a recent-enough time period, however. Housing affordability
is volatile since it strongly depends on things like mortgage interest
rates and non-salary income, which can vary greatly. Obviously interest
rates have varied greatly in the downward direction in very recent years,
and we had a few good capital gains years before that.

If you look at this one

http://www.census.gov/hhes/www/housing/hvs/q303tab5.html

you'll see that the rate of home ownership in the US, which varied
between 63% and 66% for the 30 years prior to 1995, took a jump starting
in about 1997 and was at 68.4% in the quarter just ended. It seems
hard to argue that houses have gotten less affordable over the long
term when the fraction of people who demonstrate they can afford
to own a house by doing so remained fairly constant for so long and
actually took a significant upturn in the last few years.

They must be buying immodestly priced houses, then, because there are
more homeowners than ever before.

Chuck, I'm not so sure about that.

The official mouthpiece for the ARS in the USA just published
(December 2003, pg 77), "The Best (ARRL/TAPR) DCC (Digital
Communications Conference) EVER!"

Shirley you misread the Packet Status Register.

Interesting. In comparing between the years that are specified in the other document, they also show an increase! I wonder what causes the discrepancy?

My link: 1995 ~56% 1894 ~60 %
Your link 1995 ~65% 1984 ~64.8%

Perhaps the difference is that many people are living in houses that they can't afford? There is some data there, but I haven't had time to check it out.

It often costs more to change a contract than it does to simply live with a minor inefficiency. Nobody is losing that much money. It's just an irratation to constantly buy new fans.

> I think it's perfectly reasonable to expect them
> to do so! It's part of life in a modern industrialized
> society with global trade.

I've been going in circles with Kim over this very subject. People (consumers) purchase hundreds of items each year. Products constantly change, meaning ongoing research for each item would be required. Because of that, consumers simply don't have the time or the informational resources to even superficially research each of the items they purchase. I certainly don't do it and I seriously doubt you do either (however, Kim says she does).

> They don't have to. The govt. requires all sorts of
> labels on all sorts of items, which means all one
> needs to know is how to interpret those labels.
> Outfits like Consumer's Union do product testing
> so we don't have to. And the 'net gives us access
> to enormous amounts of information.

Do remember we're talking about the economy. Labels are not going to tell us which companies are moving factories overseas, or which are paying their employees decent wages, or which are using illegal immigrants, or which are using materials made overseas, which are using sweatshop labor, or so on. And the internet does give us access to enormous amounts of information - most of it biased, agenda-filled, garbage. Getting accurate and reliable information is the hard part. Government at least tries to offer info about larger corporations, but who offers that info when it comes to the stores, businesses, and factories, in my hometown (or in hometowns around the country)?

> And it doesn't take a degree in economics to know
> that if enough people stop going to Ma's Diner and
> instead patronize Taco Heaven, that Ma's is going
> to go out of business.

Consumers don't act as a single body, Jim. When was the last time you pondered what other consumers are doing when you went to a restaurant?

Without doing so, there is no way to know other people have stopped going to Ma's Diner. Instead, you go to Taco Heaven assuming everything is just fine over at Ma's Diner. Other consumers do the same. Most only discover there's a problem at Ma's Diner when they see the going out of business sign. The same pattern plays out in other markets (Wal-Mart versus local stores and so on).

The Commish, in its infinite wisdom, decidied to take no action on
the situation (i.e. they just hid from their responsibilities once
again).

This is vastly different from saying that it's OK to use that
language. This also does not create any precedent that anyone can
rely on.

The next sitution may result in full-fledged prosecution - who is to
say it won't? Nowadays one can't predict what they will do.

The only time I legitimately expected offshore customer support, and
got it, was when I needed warranty repair on a kitchen appliance
made in and branded as from Australia. The lady's Aussi accent at
the end of the 800 number transfer string was unmistakable.

She referred me to the service department of my local dealer, of
course. Not like Seiko which wanted me to contact the local dealer
who would have to ship the defective watch (30 years old) back to Japan
for service. I canned it and bought a Timex.

Docket 03-104 is still active. As of the close of the day on Thursday,
13 November 2003, there were 5,088 documents in the ECFS on BPL.

FCC 03-104 isn't an NPRM (Notice of Proposed Rulemaking). All the
Commission wanted was some guidance from all on what standards
should be imposed when they DO issue an NPRM. Go to the ECFS
and look at the end of the list for the FCC documents originally
issued.

By now the Commission has gotten at least 4500 comments from all
sorts of folks saying IT IS NOT A GOOD THING. BPL isn't a good
thing. It is a bad thing for everyone except a minority of would-be
profit makers wanting to soak the public for BPL access to the
Internet.

Kim, you are welcome to look IN DETAIL all throughout Title 47 C.F.R.
and you are NOT going to find those "words." [it's a 5-volume set on
paper from the G.P.O.]

There is NO such "word list."

All that you can find are some generalized statements about obscenity
and so forth in the rules, ALL rules and regulations.

The only "words" in broadcasting are at the NAB, the National
Association of Broadcasters...and the individual Standards
groups at individual broadcasting networks.

Egbert, according to the First Amendment of the United States
Constitution, there's NO "license membership requirement" to
petition our government for the redress of grievances. None at all.

You seem to be confusing the FCC with the ARRL. Try to
separate church from state.

Good luck on becoming unconfused.

>and how many want to keep the code.

There are only 4,600 documents in the ECFS as of the end of the day on the east coast, this Thursday. If you have a large hard disk and lots of time, feel free to collect ALL of them and view them, or categorize them as you want. They are all in PDF and most browsers will automatically invoke at least an Acrobat Reader (free download from Adobe) if you click on the lower left underline of each listing box.

Disregarding the RM-10811 comments, I'd say that the opinions are roughly split evenly as to retention or elimination, based on spot-checking the short (1-page) comments and reading all of the comments over 1 page.

RM-10811 was submitted by FISTS and their website encourages affirmative one-liners by all members. Over half of the FISTS petition comments are such one or two sentence "support" statements. According to the latest ARRL news blog, RM-10811 is the only one that counts (FISTS is solidly pro-code) and Joe Speroni (a decided PCTA) is the only acknowledged "petition statistician" in the ARRL biased viewpoint.

Oddly enough, Speroni, AH0A, is responsible for RM-10808 which gathered only 191 comments. The FISTS petition comment total stands at 959.

The official Comment period for all petitions ended last week.

1. You are NOT, nor ever were, my commanding officer or even
ranking superior anywhere, including this newsgroup.
You are just rank.

2. I was elsewhere Sunday through Wednesday, taking part in
veterans memorial services or visiting the VA hospital here in
the Valley. Such visiting doesn't end after Veterans Day since
those guys (and a couple gals) aren't going anywhere else.
It's NOT like your own hypocritcal "sincerity" suddenly turning
on during an official holiday and then definitely turning OFF
all "sincerity" and so forth for the rest of the year.

3. This thread is solely about the 14 petitions against/for morse
code testing in the U.S. amateur radio license test regulations.
It was posted as a "heads up" for those who have not been
tracking the numbers of comments on the 14 petitions. Try
staying with the program.

4. Back under your bridge little troll.

well the control operator is ron N9EE, he did shut the repeater off several times, but whenever it came back up coy roy was there.

on nov the 13, coy roy was back, and ron tried to make peace with roy, tried to pursuade him to fit in, and all has been forgotten and that he is welcome on the repeater anytime, and ron was handleing the situation quite well. roy did stop the agitation for several hours after the conversation.

coy roy also talks about another CB'er MENTAL MIKEY
other phrases he loves to use are "fag boy" "punk boy"

alot of this post is for archiving purposes in the newsgroups, so if people down the road have a problem with him, they can search the newsgroups and history will come up. the newsgroups are an invaluable tool of past history.
an archive system spanning several decades, and still growing every hour.

Your first clue that the quote is not from Roosevelt is that he is
unlikely to have referred to himself as "President Roosevelt".

I don't think it hard to argue at all, Dennis. Years back, people were advised not to spend more than 25% of their income on housing. Later this was revised to 33%. Today it is not uncommon for folks with two incomes paying *half* of their combined income for housing.

In my area, houses are being given away and property taxes are very low. Wait until you're near retirement before buying here though. You have to bring your own money.

It isn't necessary to research each and every item you buy, Dwight.
I certainly do research before I make big purchases and I make my
decision after weighing a number of factors including quality, where an
item is made and how much it costs. With items like TV's and VCR's, I
only worry about quality and price. There haven't been any of those
devices made in this country in years.

Take amateur radio gear as an example. Did you buy the "plastic fan" of
amateur radio equipment? Was it made in the U.S.? I run Ten-Tec gear
despite price. I get a superior performance from a transceiver made in
the U.S. I could have gotten a cheaper radio made in Japan.

Then no one who isn't eating at Ma's should wring his hands when it closes if they've spent their money Taco Heaven. I buy major appliances from a local fellow. Part of it is good will. Part of it pure selfishness on my part. When something breaks, the local fellow comes right out to make repairs. I don't have to schedule a visit by a fellow 40 miles away. I just bought a quarter of beef. The steer was standing out in a field a few days ago. I paid $2.00/lb and the only middle man is the fellow who cut, wrapped and froze it.

By the way, we've noticed no BPL rollout here in West, by God, Virginia.

I dunno Phil. I just took delivery of a piece of bound carpet and two runners for our dining room. It took Lowe's eighty days after my order and payment to deliver it. I could have had a Turk hand weave the thing and personally deliver it in that period.

Around here in this county I live in, home ownership is next to impossible, except for spending at least $75,000 or better. The average small 3 bedroom house, no basement or garage (slab built) on a half to full acre runs *at least* 75 grand or better. Go immediately outside of the county lines of this county, and the similar/equivalent structure is anywhere from 25-50% less. I guess it is something about Midland county I guess.

Generally the terminology states soemething to the effect of "good amateur practice." My ONLY PROBLEM with that is WHO gets to decide what the benchmark is for good amateur practice..... If the FCC, who issues our licenses are not going to do it, then who?

As for specific words??? Dunno, is there a list?? :) Who makes the list then? Are other things other than the known "7 dirty words" included? If someone is of say, for instance a different faith than you, do you get to determine anything they say religiously is offensive and should be banned speech? I am sure there are other examples one could come up with.....

Another mental case who thinks that his screwed-up opinion represents
everybody else's thinking.

They call that - meglomania.

Sorry to be the one to have break it to you, "D.", but there are thousands
of packet radio operators in the U.S. who DO care about the hobby.

The nastygram opinions of disruptive, anti-ham jerkoffs such as yourself
have no significance whatsoever.

In the USA, its the only remembrance day not moved to/celebrated on
friday or monday. The masses think they are being cheated out of a
three day holiday. It really pisses off some of them.

The cost of a home always seems to be "next to impossible" relative to
the place it is located in, with the "next to" part being key. The other
constant since the end of World War II has been that the "next to impossible"
price very often looks cheap when viewed in retrospect, though I'm not sure
one should count on this being true everywhere forever.

As an example of how "next to impossible" can vary with location, the
house next door to me in Palo Alto, CA, which sold a few months ago after
a few years of unpleasant economy here, sounds a lot like yours. It's
a 1,300 square foot bungalow, no basement, 50 years old. It does have a
one-car detached garage, but the lot is only 8,000 square feet. It was
listed at $885,000, and it sold for that on the first day it was listed.
They didn't even put a sign up.

If there were $75,000 houses where I lived and intended to stay I think
I'd struggle to buy one. You have to live somewhere, and even if the
post-WW2 trend doesn't hold the prices other places have a lot further
to fall.

As a percentage of the population there are less homeowners than ever
before, and the percentage is trending downward even in this time of
unusually low mortgage interest rates.

That's very true, but my strong bias towards arguments which can be
supported by existence proofs requires me to argue that the fraction of
one's income spent on housing which is "affordable" isn't necessarily
a fixed number, but instead depends on the fraction of one's income that
doesn't need to be spent on everything else one requires to live. The
fact that those people ended up in houses despite the chunk of income
this took says to me the chunk was still affordable, though at that
level of investment it would be sad if the value of the house dropped.

>In my area, houses are being given away and property taxes are very low.
>Wait until you're near retirement before buying here though. You have
>to bring your own money.

I noticed that. In fact at one point in my life I noticed that I
could swap a townhouse in Arlington, VA just about even for nearly
half a mountain, in a pricier end of your state at that, and came
very close to doing something about it. It was only the conclusion
that the commute to work in northern Virginia would kill me, even
if I didn't do it every day, which kept me in the townhouse.

I live 70 miles northwest of New York City, downwind from the largest dairy farm in the county and with a gravel mine 1/4 mile down the road. 1 acre lots and the typical 3 bedroom home will set you back at least $250,000 with matching property taxes.

Heard (possible urban legend) that the FCC in "case law" refers to
George Carlin's list
but doesn't actually list the words. George Carlin's recorded comedy
bit is a "published
work", like that of a book, and thus can be referred to in another
document. I'm no
lawyer, so the above could be BS.....

Not quite - Independance Day (July 4), Xmas (Dec. 25), and New
Year's Day (Jan. 1) are not moved, and they all are "remembrance"
days of one thing or another.

Be happy. What you describe would cost four times that here (less
if on a quarter acre), and easily ten times that in any developed
part of California and many other states.

As to Dennis' comment about the house in Palo Alto (CA) - earlier
this year my daughter sold her telephone-booth-sized condo apartment
in Hercules (CA - East Bay) the same day she put it up for sale - it
didn't even make the Multiple Listing register. She got well into
six figures.

From what I understand, the furniture industry is somewhat like
that. If what you want is out of stock you may have to wait some
time until the next cutting cycle for that model. This is basically
independent of where it's made.

In my little city, State College PA, there is 1 lower cost housing development (actually about ten miles out of town, and of the locals, all who are employed in the retail trade (save the owners) live outside of town. It is not next to impossible, it truly is. It has caused a strange anomaly. The only houses being built at this time are houses from around 500K to the 2 million dollar range.

Note I use words like impossible and only. I don't doubt you might find a 250 thousand dollar (low end) house being built around here, and there is no doubt some people who work at the local Megalo-Mart and live near town in a trailer, but that is certainly the trend around here

Hoowwee! Your not kidding! If you can get a house around these parts for 75K, it is probably a major fixer-upper, or a mobile home.

Right! What these people consider "affordable" does indeed vary. I had some neighbors some years ago who were so hell bent on having a desirable hous in a desirable neighborhood that they financially destroyed themselves. They spent way more than they could afford for the house in the first place, then borrowed money for the down payment, then ended up paying well over 50 percent of their take home for their mortgage payments. It wrecked them, lock stock and barrel. I rmember them right before they moved, chuckling how they put one over on the bank. They were *so* fixated on thier goal, that they sacrificed everything else for that house.

There is much more to life than having a house, come hell or high water. The owners must have enough capital left over that they can participate in being a consumer. If a person is "house poor", they get to stay home and enjoy their house, but lots of the extras, which help drive the econnomy, go wanting.

On the other hand, despite the wailing and gnashing of teeth of the real estate agents, I spent about 50K less than what I was approved for for a house, choosing to enjoy my hobbies, provide extras for the wife and kid, and put money into retirement accounts.

So they ended up selling the house (I think they went bankrupt, but am not sure). I'm still here, living a tad more modestly, but putting money in the bank. Different ideas on what is affordable? You bet!

Once I started college, I was only at home in the summers and paid all my
own expenses when not at home.

Due to various ups and downs in life, my daughter is going to college
entirely on her own nickel today and will graduate in May. She has not
lived at home at all since the age of 18.

No it does not follow. The people in the WTC buildings were subject to a
circumstance that no one could ever have even guessed might happen or
foreseen might happen. That was not within their power to prevent or solve.

Never meant to imply that I thought it was something you were dealing with. If I did so that was an accident. My point, which I didn't make well apparently, is that it isn't going to do the people you talk about any good to try to control wages and prices and force the economy. It's got to correct itself and people have got to take what steps they need to so they can continue to be productively employed. Well meaning people who try to control national and international economics cannot change it.

And yes if you are willing to move, there are sufficient jobs for people. But vast numbers of people won't do that.

Disallowed.

The PCTA say there are more Morsemen today than at any time in
history, including the heydays of Morse, when Morse was the about the
only form of long distance communication.

Thusly, we are not allowed to participate in "per capita" discussions.

Your strawman is now chicken litter - poop-poop.

didit.

> ......but it isn't because it's an apples to oranges comparison?
>
> - Mike KB3EIA -
>

What I am saying is that it takes a lot more detailed analysis before you
can make a legitimate comparison. It's not as different as a surface
analysis may lead people to believe. People are choosing the 30 year
mortgage. The mortgage companies went this route not to make it easier to

buy a house but to make more money off that loan. By the way, no mortgage company that I've had contact with would ever allow the payment + insurance + taxes to be as high as 50%. They would not approve the loan. Today's starter house has airconditioning. The 1950s starter house did not. But today's consumer has chosen the more expensive version of the product and very, very few will buy a house without it so now it's not comparable without doing a whole lot deeper analysis. Somehow you've got to add an allowance for air conditioning to the older house.

Another example, take the cost to drive drive. Cost of gasoline is not the only element to consider. You must factor in the fact that cars now last longer not just how far the price has risen. You must also factor in that the average car today gets far better mileage than the average car then. You need to somehow factor in the fact that you can't even buy a stripped down car now although they were the norm in the 1950s. People became more and more reluctant to buy them and the makers responded. The market (i.e. consumer) has chosen to have an inherently more expensive vehicle.

Simplistic analyses won't do it.

Dee, Capitalism is the best darn economic system to ever hit the earth.
Period. And supply and demand is a better bet than anyone's deity being
the real one.

But, our country's economy is not really what I think you think it is.
Unbridled capitalism tends toward major boom and bust cycles, and can
produce some particulary nasty characters, as the running motive behind
it at times alllows one small group or person to grab all the cookies so
to speak. Capitalism turns a basic human characteristic, greed, into a
pretty good thing. But all by itself, greed turns into something else
than what we might want.

Our economic system has plenty of controls on it to help avoid the
greediest to own it all. And it works pretty darn well IMO.

> And yes if you are willing to move, there are sufficient jobs for people.

And this is the real killer. When the Federal Income tax was first initiated, the average person's tax rate was only 3%. The average RATE is now much higher. So the Feds are getting a bigger percentage of an inflated wage. So the tax income rises at a rate greater than wages and inflaction.

So you're saying we should go to "Ma's Diner" for the sole purpose of
keeping them in business?? I don't think so.

Adjusted for inflation, that's far LESS than I paid for a comparable house
outside of Seattle in 1974 except that it only had a standard size lot not
anything as luxurious as a half an acre.

So 1973/1974:
Engineers fresh out of college starting wage approximately $10,000
House cost approximately $35,000 in Seattle.

Now in 2003:
Engineers fresh out of college starting wage approximately $45,000
House quoted above comparable to the one in Seattle costing $75,000

Wages went up 4.5 times and comparable house just over twice as expensives.
Hmm yup houses cost more today relatively speaking.

The situation will be self correcting just as in the past. Housing prices will fall to where more people can afford them and buy them.

Another factor affecting home ownership is that there are today a larger percentage of people who choose not to own a home for various reasons. If you can't keep it for several years, you will probably lose money. Seven years ago, I lost my job in Illinois and had to sell my house at a net loss since I needed what equity I could get to move to the next job. I'd only had it a couple of years and the value of the house had not had time to increase enough to cover the realtor's fee. So although I could have bought a house when I moved to South Dakota, I chose not to. There was insufficient information for me to estimate how long I would be there. It turned out to be a good decision because three years later I moved to Michigan.

Ryan, I went to QRZ and looked up your address, so you get one more
hit at QRZ.com. Apparently you're betw the Baycityrollers and
Saginaw.

Where I live, a 75K home is called a crack-house and a public
nuisance.

Location(cubed).

If you have housing available at 75K, and it is suitable to your
desires, and you have a steady job, go see your mortgage lender today!

Try to locate in a non-restricted neighborhood so that you can play
radio.

>least* 75 grand or better.

What would you consider reasonable?

Check out

http://www.realtor.com

for an idea what houses cost in other parts of the country. You can search by
zip code, town name, etc. Set limits on house size, price, etc.

You don't want to know what a house costs around here.

>Go immediately outside of the county lines of
>this county, and the similar/equivalent structure is anywhere from 25-50%

Under $50,000? Amazing. But remember the three most important things about real
estate....

What are the taxes like?

No I never said we should have unbridled capitalism. I'm quite aware of the problems that result from that. What I am saying is that the controls must be minimal and well thought out. Things like the practice of a large company with significant reserve capital choosing to sell at a loss to drive their smaller competitor out of the market cannot and is not allowed (assuming they get caught at it of course). I agree that today's system of controls achieves a pretty good balance. That's why we have to be very careful about any changes so that we don't throw it out of whack and create a new problem possibly much worse than what we face today.

Not quite. Some people are simply chronically unemployable. But many would indeed be in better shape if they were willing to bite the bullet and move.

I know people who have been waiting decades in southern Ohio, and are still waiting, for "the steel mills to return" and refused to even think about going where there was work because of it. They decided to get by with whatever combination of odd jobs, welfare, etc they could manage to put

together.

done it, and yes it is not all that difficult to do."

> Then, get your own damned sites, Dwight. Point is,

> become smart about what you're buying. (snip)

Kim, when it comes to mainstream consumer information, I'm as well
educated as most anyone else, most certainly including you. But we were
talking about the economy - more specifically, the impact of consumer
purchasing trends on the economy ("shoppers not going to the store to ponder
global economic implications," "economic awareness," and so on) and how
difficult it is to find substantial economics-related information (which
companies are moving factories overseas, foreign business investments, and
so on). We were (I was) not talking about environmental issues (the Exxon
Valdez oil spill you mentioned) or other such topics. Now, just like
everyone else, you're certainly free to bring up those other topics, but
please don't apply something I've said about economics to those topics.

Jim:

Precisely. On amateur radio, one never knows when one will encounter something which may make someone think twice about our hobby being a wholesome and proper activity for a young person. When that happens, whether or not what was said was "legal" within the letter of the law, the potential exists for the effect to bring the ARS "...one step closer to extinction."

Kim:

You apparently couldn't care less about whether or not sexually-suggestive,
objectionable language used in the context of poor individual judgment is
used on-the-air. If you did, you would have taken Mr. Hollingsworth's
admonishment to heart, and changed your call sign. However, if it makes
you feel better, in recent weeks I've heard the words "piss" and "shit" used
on prime-time TV programs. The effect that had on me was to make me
pick up my infrared transmitting device and QSY to The History Channel.

Exactly what I meant. If "Ma's Diner" isn't selling what I want then I'm
not going to buy regardless of small store, large chain or whatever. I
thought however the original post was Dwight's not yours. He seems to be
advocating that the government "fix" consumer's purchasing habits so that

the local stores stay in business.

While I normally disagree with a great many of Kim's posts. Here she is fundamentally correct. Consumers do have the choice to be informed if they really want to. If they don't want to go to that much work, then it is their own problem. Government should NOT be doing your research for you. I certainly don't want MY taxes to go for the checks on goods and information dissemination that you seem to think the government should do for you.

You obviously missed some of the conversation, Dave. I was complaining about the quality of plastic fans today and how I couldn't find better ones locally. When Jim asked why I bought fans locally (instead of shopping on the internet), I explained the fans were purchased under the terms of a business contract. Jim suggested the contract should be changed. And this is about where you came in to read my reply above.

> It isn't necessary to research each and every item you
> buy, Dwight. (snip)

Actually, I was trying to make the point that we wouldn't have to so diligently research products if government and business was held to a higher standard when it comes to the economy. I've posted more details about that in other messages, so I won't repeat it again here.

> By the way, we've noticed no BPL rollout here in West,

Yep, this thread has covered just about everything except that recently, hasn't it? As you know, it's pretty much the nature of these newsgroups to stray off into other topics in any given thread.

No, it was just a simplistic example to illustrate that consumers don't always realize what other consumers are doing, or the impact that might have on a particular business (or the economy if this overall example is applied more widely). In this case, a customers decides he's bored of the delicious steak dinners at "Ma's Diner" and decides to eat over at "Taco Heaven" for a while (perhaps to even save some money). But, if enough of "Ma's" customers do that at the same time, the effects would be devastating on "Ma's Diner" (even though that customer, and none of the other customers, ever intended that).

Kim, you really have no idea what we were talking about, do you? Before you sidetracked the discussion with this type of nonsense, we were talking about the economy and economic-related issues and information, not general consumer product information. Therefore, nothing I've said about that (the economy) has anything whatsoever to do with "subliminal advertising" or anything of the sort. Do at least try to figure out the subject being discussed before going off on one of your silly rants.

Larry, our society has pretty much come to the point that people don't care what others think of them any more. Foul, vulgar language is used so much now that it is spoken in homes as if it were accepted language and the kids pick up on it. I have heard five year olds use words that I would never dared to speak in front of an adult when I was a youngster. I have had my mouth washed out with soap (by a teacher at school no less, would like to see one try that now), for saying much less.

I grew up in a farming community and when around the men, sure a few cuss words would fly occasionally, especially when the wrench slipped and a busted knuckle was the result, or over at the local shop where the farmers gathered as their trucks and tractors were being serviced, a hell or damn was pretty common, but never in a public place where women and children were around. There was respect for others then. It isn't uncommon for me to step into an elevator with my wife and hear others using very vulgar language with no regards to who is listening and may be offended by such language. The sad part is, they think it is just accepted that everyone has lowered themselves to such a common level.

Ever set at the mall and just watch the people pass by? Look at the sloppy dress, some look like they stepped out of a cartoon. Few have pride in themselves anymore. And if you really want to see some sloppyness, go to a ham fest. It is a sad commentary on our society today.

First of all, do understand that we're talking about the economy, not consumer product information. Kim seems to forget that. Anyway, my position is that, when it comes to the economy, we pretty much have to depend on the government at the moment. Business does not generally make it's decisions (moving factories overseas, overseas investments, investments from overseas, material purchases, and so on) well known to the general public. It would be a massive effort for one person to reseach what they do offer to the public now (and I don't think they offer nearly enough). Take a single industry - the automobile industry, for example. It would take years for one person to research what is going on at this very moment in that industry. What is even worse, and as I've said before, much of the information is not that easy to obtain. Even if you want to break this research down to just a single purchase, it is not always that easy. I purchased an "American" car. That "American" car turned out to be made in Canada (and I didn't know that until it was delivered). Who knows where the parts in that "American" car were made. Therefore, as I've also said before, it's just not realistic to simply expect consumers to be "informed" enough to make wise economic shopping decisions. As consumers, as Americans, we have to demand government manage the economy better (as I've previously outlined).

First, please don't assume what anyone's position is, Dee. Jim made a specific comment and I was responding to that specific comment alone, not the topic as a whole. My response was an explanation of the process at play as I see it, not a "fix" of any kind. Second, I'm not really "advocating" anything at all. There isn't enough of us here in this newsgroup to even do so. If I wanted to advocate something, I would do so in a much more "audience rich" environment. Instead, we're simply discussing another one of the many topics we routinely discuss in this newsgroup.

I've heard five year olds use words that I, as an adult, would not say in front of other adults today. I'm certainly not a prude, but I just don't see how vulgar language improves communications or one's impression of another.

> I have had my mouth washed out with soap (by
> a teacher at school no less, would like to see
> one try that now), for saying much less.

My mother preferred dishwashing liquid (claimed it was safer than some hand or body soaps). Once was enough for me, but my brother went on a foul language spree one summer and "got the treatment" probably five or six times. My sister got it when she was about sixteen or seventeen.

> (snip) It isn't uncommon for me to step into an
> elevator with my wife and hear others using very
> vulgar language with no regards to who is
> listening and may be offended by such language.
> (snip)

There was a guy and his wife (girlfriend or whatever) in line behind us at Office Max the other day. I've never heard so much foul language in such a short amount of time (seemed like every second or third word out of his mouth). And I'm talking nasty stuff - women's body parts, his wife's body parts, body parts in general, negative words for men and women, and so on. I finally asked him to keep his voice down. When that didn't work, I asked him not to use such language. When I finally got the register, he started it again. In anger (and since there was nobody else in line), I had the casher go with me to search for printer ink behind another counter and made sure we had a nice little conversation. We even talked about his language. When he finally went to another line, we returned to the register to complete my purchase. Less than ten seconds later, the guy rushed towards the register to get behind us again. However, the casher saw him coming and put the register closed sign up before he got there. As he walked away, and I was picking up my bag to leave, she smiled real big and told us to have a nice day. This was one of the few times I truly believed a casher meant those words when said.

> And if you really want to see some sloppyness,
> go to a ham fest. (snip)

I can accept a certain level of sloppyness at a ham fest or other casual event (as opposed to the mall, restaurant, work, or other such places). Or perhaps I should say that I dress more sloppily at a ham fest than I would at work or so forth. I just don't really see an overwhelming reason to dress up for a ham fest.

Charles,

It's probably too soon to tell. "announcing a rollout" doesn't mean the system is installed and operating over a wide area - yet. It just means they've done the paperwork.

I have read reports from WK3C, W1RFI and others that the level of noise from at least some BPL systems varies dramatically over time, and is apparently related to the amount of data being passed over the system. So even if the system is installed and working, if it's feeding one residential customer who spends an hour a day online the noise will be far less than if there are, say, 20 customers spending far more time swapping MPGs.

And as WK3C emphasizes, it's important that any interference be positively identified as BPL-created *before* we complain about it. Otherwise we become "the hams who cried wolf" and our credibility drops.

Please note I did NOT assume anything. I did not state that you ARE
advocating that but that it SEEMS that you are. There is a difference.
I.e. the statements in your posts can lead the reader to that conclusion
although the position is not definitively stated.

Why bother to enter the discussion if you are not advocating your position
(or conversely playing "devil's advocate")? The size of the audience should
not matter. You never know in what venue you may find a person or group of
persons who have the ability to initiate and/or implement change.

Dave, you're hopeless.

If you should ever have something of interest, which is almost never,
please get back with me.

If not, just keep it to yourself - please.

Thanks, Brian

TEW has been stalking a lot lately. Maybe that is the agreement he made
with Riley.

But, you've already stated, Dwight, that people [paraphrasing] are too stupid and don't have the time to research their shopping products. So, how in the world are they going to be smart enough to choose the right people for government to "a-d-v-i-s-e" the public on what they should be shopping for? Hell, the government *and* business--the corporate world--are two of the most corrupt entities!! You apparently haven't been paying a bit of attention for the last couple of years.

You want to throw out these wild statements and then you follow up with some kind of clue that you don't have one (a clue).

Dee, the one thing I think I can say about you--and, to tell you the truth I attribute it to the fact that you are a woman and I just plain believe that women think a lot more logically most of the time--is that whenever you and I have "disagreed" there's never been the exchange that we witness from some of (your welcome Jim) men here in this newsgroup.

You may disagree with a lot of *how* I say something, but I think you and I probably would agree on a lot more than you may realize. I am a very "tough love" kind of person. I spent too much time in my life feeling sorry for, or empathetic for, people who had no desire whatsoever to lift themselves up and change what makes them miserable--those that have the capability and ability to do so, that is.

So, that having been said--it seems very apparent to me that Dwight has some ideas for which he has no real basis in fact. (And, that's not to say that

my ideas are all based in fact--but I at least admit it). And, I can't believe that he expects people to accept--let alone agree--with him that we are too busy and stupid to do our own research to make ethical purchase decisions; yet we should warm up to the idea that government and business can be held to a high enough standard (uh, even though we are too busy and stupid to research what the standard should be) that they can "do it for us." And, that's not even bringing into the equation that I've seen Dwight rail against the "liberals" for big government principles--yet here he is espousing to a huge government *and* rolling the corporate world up into it. The "conservatives" woud have a field day for that blessing!!

I agree with you--and I'll even take it further than how you put it to include Dwight's ill-fated thoughts: if consumers in a "free" society are too stupid, too lazy, or too apathetic, or too *whatever* to take it upon themselves to be informed, then they deserve whatever they get--including a government such as what would occur if we all thought like Dwight.

By the way...you've probably been astute enough to see this. Do you notice that I've told someone they are right? I try to always remember to tell people whether I agree or disagree with something they say--but I try never to presume they are right or wrong. Whatever they think is right for them, correct? ;)

Right, and they may be moving to a place to get that minimum wage job!

There are a lot of other things involved in the jobless situation.
During my first job, the economy tanked. I lost my job, and despite
attempts on my part, it was about a year and a half before I could get
another. Most people were up front about it:

First choice goes to married vets
Second choice goes to vets
Third choice is married.

Remember there were a fair number of vets coming home from Vietnam. As
an unmarried 19 year old, I was nowhere on their radar screen.
Unemployable. I think I probably interviewd for 30-40 jobs in a
depressed job market. I was just about to enlist when I got my current job.

> and children were around.
>

JJ, leaving the children aside because I agree with you on that one...but,
let me assure that in the dairy land where I grew up--we women on the farms
were quite capable of being just as foul-mouthed as any man. Nope, we
didn't do it in front of the men--Heaven forbid they realize we weren't the
demure, dainty pieces they thought we were, but we did it.

And, in my opinion, words don't hurt anyone. It's actions that hurt. I
don't care to hear a little kid running around cursing; I don't even care to

hear it from a man or me. But I also believe that it is our *concept* of it being so terrible that makes it so. I really mean that. It is the expression being felt or communicated through a word that is the "bad" thing. If I say, "I HATE YOU" in the same tone of voice as "I LOVE YOU" you are going to perceive that you are getting a double message there: you are going to at least wonder if there is some negative emotion being expressed as I am saying "I LOVE YOU." George Carlin's skit on words had precisely that lesson in it. It isn't the word--it's the emotion behind it.

> There was respect for others then. It isn't

> accepted that everyone has lowered themselves to such a common level.
>

I agree. But, I hope you'll understand that there's a fine line between having respect for others, and others then being able to "dictate" how I should behave. For instance, I totally respect anyone's opinion that cursing in public is offensive to them. So, I generally don't curse in public. Out loud anyway :o But, when I am in my house, or in my "corner of the world with friends of like mind," then I'm going to curse away if I'm so inclined. Would you dictate that I am rolled up into your opinion with the others you mention above--or am I being disrespectful to you for cursing at any time?

> Ever set at the mall and just watch the people pass by? Look at the
> sloppy dress, some look like they stepped out of a cartoon. Few have
> pride in themselves anymore. And if you really want to see some
> sloppyness, go to a ham fest. It is a sad commentary on our society today.
>

Oh, now see. There's where you and I would definitely disagree. I really don't care how someone is dressed--although I've found myself at times having to get over an initial reaction, if you know what I mean. If I walk into a business office and see someone with a t-shirt and jeans on--I am initially taken off guard. But, I quickly get *myself* over that and continue with whatever I walked in for. I hate, absolutely hate that I work in a corporate environment with dark suits around me all day...gosh I hate that. In other words, I've seen people in very sloppy dress with wonderful mannerisms and respect for others...and I've seen some people in very fancy and "respectful" garb that are completely without feelings for anything or anyone around them.

By the way...you wouldn't be describing mostly youth, above, would you?

>

I would have asked to visit with the Shift Manager and would have explained the situation to him/her and asked what the store intended to do about it. *If* the conversation had been loud enough for the clerk to make a decision on your complaint, then it was loud enough for her to witness to the Shift Manager. What would I expect as a consumer? I would expect the store to ask the people to leave if they persist in offensive behavior in public. There are laws against it. We probably have to take some form of personal responsibility--and we may be too stupid or lazy to do so, I don't know--for those laws to work but, failing that, my action would have been to place my products down on the counter and walk out of the store.

That is what Jim means by shopping with our wallets. On a small, teeny, tiny scale, I just had a meeting with that company's BoD. And, more people need to start having that meeting with the BoD. You call it "local" or whatever. But that BoD makes investment decisions for its shareholders. And, whether I am a shareholder or not, if me, and you, and him, and her, and them, and those people over there, and all of us combined start affecting the bottom dollar of a company's stock price--then we've also have a very effective meeting with the BoD.

And, the greatest thing is, you could choose to leave without ever saying a word to anyone--either way you choose to act; *as long as you leave without purchase* has the same affect.

Casual is OK, but there is a differenc between casual and sloppy.
Clothes that have obviously been worn for several days and smelly are
sloppy. I have seen a lot of that at ham fest. Seems that to some hams,
the acquiring of a license means they now only have to take a bath once
a month or less.

That's all well and good, but you're missing a plain, simple fact: You haven't
defined what "manage the economy" means.

If you define it as Soviet-style central economic planning, then almost anyone
with any sense will agree that it's a recipe for economic disaster, as
demonstrated by what happened in the USSR. (Largest country in the world, huge
amounts of some of the best if not THE best farmland on earth, and after 70+
years of total control they can't even feed themselves?)

But if you define it as "help things go well", it gets a lot murkier. For
example, in the days following 9-11, the Feds helped out the airline industry
in a big way with low interest loans. They were concerned that the loss of
business in the wake of the events of that terrible day would have caused the
collapse of several major airlines. Was that good management of the economy or
not?

Or look at your federal income taxes. Those of us who are home owners and who
meet certain criteria can deduct home mortgage interest and real estate taxes
on up to 2 residences. This effectively reduces the cost of buying/owning a
home. Would you take that deduction away? Doing so would almost certainly slow
down home sales and construction, and reduce property values all over the
country.

I'm old enough to remember when *all* consumer interest and sales taxes were
deductible on your income taxes if certain criteria were met. That deduction
pushed consumer spending because it reduced the effective cost of buying on
time. It encouraged people to go into debt, particularly in inflationary times,
because they could pay for today's fun with tomorrow's less-valuable dollars,
and deduct the interest and tax costs. But those deductions were removed in
order to "get the government off your back" (and pump more money into the

coffers without 'raising' taxes).

Or look where your taxes are spent. NASA's launch facilities for manned space flights are in Florida - because the orbital mechanics and safety considerations make Florida about the optimum place for a launch facility located in CONUS. But the manned flight center is in Houston Texas - because that's were LBJ was from. How many extra billions of dollars that contributed nothing to the space flight efforts have been spent over the decades because the two facilities are so far apart?

No matter what the government does about the economy, the effects are widespread and have the effect, wanted or not, of "managing" the economy in some way or another.

Common sense and good taste used to be the guide. But I guess such concepts are
old-fashioned nowadays, from what some folks tell me when I oppose the use of
such language on the air and in newsgropups.....

I think it is - IF you allow for other factors as mentioned below.

>You have to include a comparison of the features that you get for
>that cost. People simply want more on their "starter" houses and cars.

Some people...

>Today's starter house has relatively more features than those of the past.
>For example, the typical tract house had no cabinets of any type in the
>bathroom at that time. The homeowner added them later as time and money
>permitted. They did not have air conditioning. Now you just about can't
>sell any new home, even low end starter one, unless it has A/C and so on.

If you're talking about new homes, I agree in general, because the developers/builders have a pretty set idea of "what people want" and that's what they build. Of course if you have a new house built to your specification, you can get almost anything that meets code.

>Comparing the past to the present is very difficult. Too much has changed
>and it's like comparing apples to oranges.

Sometimes. But you can make comparisons based on intelligent adjustments.

For example, the house I'm in now was built in 1950 or 1951 and I moved here in 1999. At that time it still had the original gravity heater and no AC. Also no dishwasher. In fact, it was not substantially different from when it was built - just well-maintained. To me it's a "new" house because it was built after WW2 and uses essentially the same techniques as new houses today, vs. the older techniques of houses I've owned previously (built in 1923 and 1900).

In 2000 I had a good HVAC contractor install a new heating/AC system. Cost me just under $7000 and worth every penny. The cost of the new system was figured (mentally) into the price of the house when I bought it.

In 2001 I put in a dishwasher (DIY) and again that cost was figured (mentally) into the price of the house when I bought it.

Same type of thing can be applied to almost any house.

Perhaps, but you might find that it's more complex than it appears at first.

Suppose someone did, indeed, poll everyone with a US ham license.

First off, there'd be a considerable number of ballots returned because the license holder was either dead, dropped out, or didn't have a current address in the database. Note that the last in that list is a rules violation.....

Second, the survey would have to be carefully constructed to get accurate results. And you'd probably find that there's a wider diversity of opinion than just "keep the code test/dump the code test". Yet at the same time you'd want the survey to be simple.

Perhaps something like this:

"What is your opinion of code testing for an amateur license?"

1) It should be totally abolished
2) It should be required only for Extra

3) It should be required only for Extra and General
4) It should be required for any license with HF privileges
5) It should be required for any amateur license
6) No opinion/don't care

Yet this question doesn't address code speed or medical waivers, or other possibilities like "choose the code test or a special written test".

The more choices given, the greater the possibility that none of them would be a majority answer, or even a clear plurality. Then you'd be right back where you were before.

Or you might find that the majority opinion was 6). What happens in that case?

I don't read it that way at all, but I could be mistaken. I think Dwight's simply calling attention to the fact that there are some economic trends going on that don't bode well for the economic future of our country - long term or short term.

While I think government has a role to play in changing those trends, I don't think the whole thing can be left up to them to "fix".

The government has managed the economy in some form or another since the very beginning. And, in spite of what you say, this country with that government has done pretty darn well over those many years.

Kim, I've repeatedly said I don't have all the answers, am offering my opinions only, that I don't "expect" anything from anybody, and that this is a simple discussion (not a proclamation or mandate for all to agree). Now, either you haven't read that (which means you have no idea what I've said), can't understand it (too stupid), or are so determined to argue you don't really care what I've actually said.

I've also repeatedly told you that my comments were limited solely to the economy, not "ethical purchase decisions," the environment (Exxon), or whatever other issues you want to throw in. In spite of that, you still try to twist my words to apply to other things. I've also never said consumers are "too busy and stupid" to do research. What I've actually said is that information is not that easily available for consumers to do that research (economic research, not anything else) and that such research is simply too massive to truly expect consumers to do. You've offered nothing substantial to challenge that assesment.

I'm also not "espousing to a huge government." What I've said is that government should pass regulations to insure consumers have better access to the information they need to make wise economic purchasing decisions, that government better monitor business to insure that information is correct, that government offer the information they collected to consumers in condensed form, that immigration be better managed, that curbs should be put

on credit, that corporate profits be capped, rules changed to prevent factories and industry moving overseas, and so on. Even if you don't agree, none of these are exactly radical new ideas - all have been widely discussed for many years.

This is the last time I will say all of this. If you continue to misrepresent my position after this, then I'll assume you're doing so simply to be dishonest and will respond accordingly.

It shouldn't be that difficult to figure out, Dee. People do it all the time - talk to friends or sposes about events half way around the world that has no direct bearing on any of them, talk about criminal trials when they have influence whatsoever on that trial, talk about what they might do if they had a million dollars, talk about the economy when they have no real intent at the moment to do anything about it, and so on. It's simply conversation. Few are ever 100 percent right or wrong in these discussions. Instead, they hear different perspectives, re-enforce some views, change other views, and hopefully walk away slightly entertained by the experience.

I wish there was someone like that in this newsroup. I'm sure we could all give him or her an earful. However, after six or seven years in this newsgroup, I haven't seen even a hint of such a person. As for the regular newsgroup participants (including the guesstimated lurkers), we're not really large enough in numbers to impact even a small town's elections (much less impact national issues).

With the possibility of lawsuits, I doubt many stores would be that overt today. Many of the offensive language laws of the past have been struck down as unconstitutional (enough that few stores would want to take much of a chance pushing the issue)

I've seen it too, JJ. But, since it's pretty much a personal choice, there isn't much that can be done except to set a higher standard for ourselves. In our case (my wife and I), that's easy. We lived in Europe for ten years, in a country where people tend to dress relatively well in public and keep their homes and neighborhoods clean. We picked up that habit and now find it uncomfortable to do anything less. When we first returned, my relatives constantly complained we were overdressed. That surprised us since we were wearing the cloths we wore daily in Germany (our nice cloths were still packed). Many of our friends and family still think we're a little eccentric (the actual word two of them used) for keeping our home so clean. We've since started wearing more casual cloths, and are not so rigid on the house cleaning, but not anywhere near what I see around us. My wife's brother visited last summer and commented that our house looked like a museum. While the house was cleaned for the visit, I certainly wouldn't go that far when describing it.

I don't dispute that. However, there are plenty of packet operators who also know that TAPR has been a non-functional group long before a decade ago. What you posted isn't news to anyone (nor does it really belong on the "policy" group - there are packet specific groups).

As long as you keep the froot-loops all
in one place then I see no problem.
For an example, the historically amusing ham
frequency of 14.313 MHz. is becoming alive again
with the sound of screwballs (..as opposed to the
sound of music) on the weekends like clockwork again.
You know it's gonna be there like Monday Night Football.
I have observed for 20+ yrs that as long as the screwballs, bootleggers
and kooks among our ranks KNOW where they
can go for their weekend dose of juvenile
amusement, they will gravitate to the same
and leave the rest of us *alone*. It's like the
red light district in town. Every medium city needs
one where the dregs of society can go to fulfill
their needs and perverse desires. 14.313 and one
or two freqs on 75 Meters do just that and act
as a steam poppet valve for the rest of the hobby.
Logical, ain't it?

Well, that's true. You never said consumers are "too busy and stupid." I specifically stated that I was paraphrasing what you actually said:

"Consumers in general have neither the business awareness or economic awareness to make those types of decisions on their own. And they also certainly don't have the time or money to fully research an industry each time they want to go shopping for something."

Maybe, Dwight, you can put what you said a different way, so that it doesn't sound like you are thinking consumers are too busy and stupid. Could ya do that for me?

I don't know who it is you think is not reading and understanding your posts, Dwight. I think I've been fairly accurate. If I misrepresented your position on exactly what it is you are saying, I'd like to see what it is you actually intended the message to say.

Yeah, Dwight, that's me...sitting around thinking of ways I can be dishonest. I think you're just up against a wall on this one and you're choosing the only way out you know...which is certainly your choice. At least one other person who's posted comments to this thread has had the same interpretation of what you're saying...and you've not been as "upset" about those interpretations. And, I daresay there's been two, but not so sure about how it is that Jim has interpreted your comments. I've just been a whole lot less diplomatic and far more blunt.

So, whatever...

This thread does have nothing to do with veterans. I would hope that the main message of November 11th is that too many people have died in senseless wars. BTW, I was in the local Veteran's Day parade with the scouts.

This seems like a tactic to divert the thread from the no-code petitions.

Those who have not obtained a licence because of the code trest are just
as entitled to express their opinion to the FCC as you or I.

You always seem to come up with some reason not to effect change, Dwight. At the end of the post you have a little bit of above, I even stated that you could put the items down and leave--without ever saying a thing to anyone.

How do you feel about doing that? If you totally disagree with how the people were behaving, say nothing to anyone, and just simply walk out of the store; then you be sure that you enlighten others as to this way of doing something in our litigious society today, what do you think the potential is of making some true changes in our society and in the businesses that we do business with?

Oh, I forgot...never mind...I'm lying...

I think it's something else, Dwight. I think a big part of happiness is baased on our expectations vs. our reality. And a lot of us Americans allow ourselves to develop tremendously high expectations, and then aren't so happy when they aren't met.

The person who expected to be living in a 4000 sf house by a certain age may be quite disappointed that they are now past that age and living in a 2500 sf house, and they're maxed out (can't really afford to move or add on). Never mind that the 2500 sf house is a nice place, etc., etc. (Just one example 'cause we've been talking about houses).

Hey, I'm just reporting a bit of news that not everyone may have been aware
of. You'd be amazed how many hams think of TAPR as a packet radio
organization, even in the ARRL. That's the extent of the significance of my
post.

Code/No-Code has no place in a "policy" newsgroup either, but guess what?

Zactly ...Our society has become the "bum society". It is now the vogue to have baby showers in the school for the 15 yr old girl instead of her whispered trip to her aunt Mary's in Ohio that resulted in Aunt Mary raising a child the proper way. We proclaim liberty and freedom in the old USA but fail miserably to protect the unborn to the tune of millions a year. Then the people wonder where the respect for human life has gone. Our TV has become a cess pool instead of a resource. Did you ever see the "new" cartoons? Vulgarity begins to be accepted as norm at a young age let alone the Springer type shows out there. Common manners are gone. Who would have ever eaten at home or a restaurant with a baseball cap on? Language .... the liberal use of Sponge Bob's "sentence enhancers" is every where and accepted as norm. It is of no surprise that ham radio manifests the same in on air activities and "cute" calls. I however can escape to a venue where I do not find this happening ...call it what you may ...I call it CW.

OOPs got me again ...Pontification filter is on

God Bless 73 KI3R Tom Popovic Belle Vernon Pa

Some do.

And that's why this country fears lay-offs so much. There is so very
little slop in one's income to expenses that even a couple of months
out of work spells ruination.

No rainy-day accounts either.

But bankruptcy is easy to get, so everyone else ends up paying for
their houses, SUVs, and big-screen TVs.

Sure - nobody is saying that should change.

However, note that there has been an amateur radio license with no code test
available here in the USA for almost 13 years now. That license gives full
VHF/UHF operating privileges and requires only a 35 question written test.

A code test is only required for access to the HF/MF amateur bands.

So anyone who wants to obtain an amateur license can do so without any code test.

In my case, I've never stayed in one place long enough to have those type of expectations. I've traveled most of my life (both as a kid and later as an adult). I'm just in a mood right now to settle down somewhere. The problem is that I haven't figured out where to settle down at. I haven't lived in one place long enough to really call it home. My family is spread out across the country (the same with my wife's family). Because of all that, we never get to the point of thinking about a house - we're too busy looking around the country for an area. And that is perhaps where our expectations are simply too high.

> Sometimes it's a good thing that 'the one that got
> away', did.

Been there and done that. We went across the country a few years ago looking up old friends and the places we once lived. We were shocked at the many changes (in the people and the places). After that, we decided not to do so again with the remaining people and places - it's simply best to remember them in our minds the way they were.

I couldn't agree more on that, Brian! For sure, as they would say. I am shopping for a new home and my husband and I have decided what we are comfortable spending, what we need and desire in a new place, what kind of interest rate we'll accept, and what payment we want. Know what? One mortgage company so far has told us, "you have a lot of room to move," meaning that we can get into something much bigger and more expensive than we are looking for. They seem shocked that we aren't interested in "maxxing" out our limit!!

And, you're right about bankruptcy, too. When I said to a lender that we weren't comfortable with the expense they were suggesting, they said we could afford it and didn't know what the problem was. I told them I think about things like potentially losing my job or my husband losing his. The come back was that we always have bankruptcy available!!!

Good grief...

Don't be so defensive, Kim. Most would agree one could simply walk out of the store. Because of that, there was really nothing much to add to that part of the conversation. Instead, I added to what you said in another part of your message, which obviously gave you an opportunity to address that. After all, if you're going to approach the manager, that is going to be on his mind.

Defensive? I don't know where you got that. While the Manager may be thinking of legality and lawsuit issues, it would not come to a legal issue by simply approaching a manager about the issue. What that does is give one the opportunity to "field" what reactions will be at the idea of a consumer complaining about behaviors of others in a store. If it's determined, through experience, that we can't do things people-to-people because of fear of retribution, then there's all opportunity in, as I said, simply lying down the products you were going to purchase and walking out. One could even follow-up with a letter or email (anonymous or not) to the corporate headquarters of the company.

I think I was probably of the thought you were being dismissive of the *whole* idea simply because of fear of reprimand. Fear of reprimand is some of what has paralyzed people in this country from demanding the behaviors we wish to see from others (personal or business). There are ways around fear of reprimand.

But 10 meters is rarely crowded, getting 11 back, though nice, isn't
that critical.
More bandwidth on 20 or 40 I would prefer.

The hams hardly used 11 meters when they had it, what makes you think
they would use it now if they got it back? Besides, the cbers have made
such a mess of it, it would take years to clean the filth out.

>"maxxing" out our limit!!

Sure. I've encountered that, too, in all sorts of transactions, Their focus is
very narrow. And their fees and commissions are based on the selling price.

And note that reselling mortgages is pretty standard, so the people who sold
you the house and mortgage won't be holding the bag if you do default.
>
>And, you're right about bankruptcy, too. When I said to a lender that we

Then the house example wasn't a good one for what you are talking about.

Then consider the fan example. Your expectation is that finding a fan which will not wear out in X hours of use should not require a wide search. You expect to be able to find one locally without a lot of hassle. But you can't, and that's a disappointment.

Same principle, different specifics.

No, no! We're not having a place built...we are ordering a manufactured home (trailer, whatever-you-want-to-call-it). We are all set with land, and explored building. But, for some reason, neither of us is particularly interested in dealing with having one built (there's not one good experience we've ever had relayed about dealing with builders...LOL).

They do soooo love their commission, and the more you spend, the more they make. A person is better served by thinking of the real estate agent as their enemy, rather than friend. We went through several agents, one I left after telling them if they showed us one more house that cost more than what we were looking for I was walking. Yup, the next house was more! There should be an i.q. portion of that test they take!

>By the way...you wouldn't be describing mostly youth, above, would you?

In both suburban areas that I have lived in the last 35+ years, in
the sumnmer one could sit and see "dress" that makes the Victoria's
Secret showroom look demure by comparison.

Fortunately my daughter never bought into that sort of conduct
although she could have been a "spectacle" had she done so. She
has too much respect for herself for that.

There are/were several "Ma's Diner" level establishments that we
patronize(d) for just that reason. Some of them didn't survive, but
that wasn't because we didn't go there.

OTOH, there are several "successful" enterprises that we just
wouldn't patronize - Wal-Mart leads that list.

send out the ballots even by bulk mail? The FCC?

No way - contrary to urban legend, for the last 10 years or so, all
government agencies pay full postage rates on everything they mail -
except for Congressional mailings, of course.

Quite a while back, there was a case against an amateur operator in
Los Angeles, and the ALJ ruled that the standards of broadcast
indecency articulated in the _Pacifica_ case (the "Seven Dirty Words"
case) also applied to the ARS because ARS transmissions are readily
available to the general public (i.e. are not protected by privacy
or secrecy statutes).

No response would probably be the commonest item even if the ballots come
with return postage paid by the government.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of November 16, 2003:

Novice - 32,875 (decrease of 16,454)
Technician - 258,433 (increase of 53,039)
Technician Plus - 63,976 (decrease of 64,884)
General - 141,350 (increase of 28,673)
Advanced - 82,323 (decrease of 17,459)
Extra - 104,728 (increase of 25,978)
Total - 683,685 (increase of 8,893)

JJ:

<sigh> Yes, isn't that the truth?

>Foul, vulgar language is used
>so much now that it is spoken in homes as if it were accepted language
>and the kids pick up on it.

Every time I run into one of those potty-mouthed kids, I feel like feeding them
the business end of a baseball bat -- after it had been accelerated to home-run
hitting velocity!

>I have heard five year olds use words that I
>would never dared to speak in front of an adult when I was a youngster.

>I have had my mouth washed out with soap (by a teacher at school no
>less, would like to see one try that now), for saying much less.

I remember one time I called one of my brothers a bastard. I was too young
to even know what the word meant. My father overheard me -- he immediately
made me go to my room, say an Act of Contrition, and immediately go to
bed for the rest of the evening. Before slamming the door of my bedroom,
he asked if I knew what a "bastard" was, and I said no. Now I do. To this
very day I wish I'd looked in the dictionary before using that word!

>I grew up in a farming community and when around the men, sure a few
>cuss words would fly occasionally, especially when the wrench slipped
>and a busted knuckle was the result, or over at the local shop where the
>farmers gathered as their trucks and tractors were being serviced, a

>hell or damn was pretty common, but never in a public place where women
>and children were around.

As a youth in my mid-teens, I used to hang around one of the local gas stations myself, so I can certainly identify with the colorful language. However, whenever a female customer came in, everyone was strictly on their best behaviour. One day this past summer, I was at a local gas/convenience store, and a lady walked in and said to the young girl behind the counter, "How come that ____ing pump won't ____ing turn on for me?" I immediately replied, "because it's probably turned off by your foul language!" You can imagine how she responded, but it's not printable here, even with a lot of blank spaces.

>There was respect for others then. It isn't
>uncommon for me to step into an elevator with my wife and hear others
>using very vulgar language with no regards to who is listening and may
>be offended by such language. The sad part is, they think it is just
>accepted that everyone has lowered themselves to such a common level.

Indeed. I myself, partly due to my having been exposed to the common element during my military service, used to occasionally allow my language to ripen a bit. I am now extremely cautious about that, and try to present myself in a very polite, considerate manner at all times.

>Ever set at the mall and just watch the people pass by? Look at the
>sloppy dress, some look like they stepped out of a cartoon. Few have
>pride in themselves anymore. And if you really want to see some
>sloppyness, go to a ham fest. It is a sad commentary on our society today.

Yes. I myself like to dress comfortably; my off-duty "uniform" consists almost exclusively of kakhis and a pullover shirt, and New Balance trainers. But my clothes are always clean and in good order -- I wouldn't want to be caught dead dressed in the sloppy, baggy, totally disorganized manner young people seem to prefer these days. I wonder who they think they're impressing. Anyone dressed like that coming to me for a job is only going to get my standard warning about the door.

If you bothered to do any research, you would know that it's not just my opinion, but the opinion of almost every packeteer in my region. It's common knowledge that we ALL know, and have known for years (in excess of a decade).

But it's not news. It's been known for years. If this is new to you, then you need to get out from under your rock more often and look around. However, I'm certain that others will agree with me; we'd just assume that you don't come out at all because you (along with a few others) never seem to have anything worthwhile to say (and/or nothing that anyone wants to listen to).

> Code/No-Code has no place in a "policy" newsgroup either, but guess what?

Actually, as it relates to the rules and testing, it does belong in the policy group. Policy is often reflected in the rules.

There you go again... Yep, after three in a row I'd say it's definately a
case of meglomania. I think they make a new drug for that, maybe you should
ask your physician.

> But it's not news. It's been known for years.

Not really. The events I described in the post were reported in the last TAPR PSR, concerning actions of the TAPR BoD last month, not ten years ago. Everybody else figured out that TAPR was adrift ten years ago as you say, but the TAPR BoD only figured it out recently. They're a little slow, but they finally figured it out.

That was the story. I don't see how you could have failed to be amused by their antics, actually appointing somebody to uncover the mystery of what TAPR is good for. The BoD put their heads together and tried, but they couldn't figure it out for themselves.

Now that's entertainment! Don't tell me that you didn't get a giggle out of all that!

Yes, and TAPR has mistakenly been viewed as the "National Packet Organization" by the ARRL and most average hams for quite some time, adversely affecting policy regarding digital modes and packet radio.

Unfortunately, your meglomanaical view that everybody in the world agrees with whatever you happen to be thinking is not supported by the evidence. In fact, opinions among hams tend to vary quite a bit, on any number of subjects.

Crawl out from under your rock, OM; Take a look around! :-p

For those of you who are unfamiliar with D. Stussy, he is a bit of a curiosity... A hardcore "LandLine Lid" who doesn't like TAPR... That is most unusual, because the whole idea of being a LandLine Lid was more or less invented at TAPR, and most LandLine Lids (digital) identify strongly with the organization. After all, the Internet is the latest advance in the art of radio, right?

LandLine Lid: Hams who communicate over the Internet and pretend that it is amateur radio.

Charles Brabham, N5PVL

well if the hams took back 11 meters....what would they do about all
the skip talkers on channel 6???? those old black men would not like
you hammies trying to run them off and they would jump up and down and
stomp a radiowave mudhole in the back of your necks and walk it
dry.....no doubt about it.....

They have NEVER been viewed as such in this region of the country, nor do I have any evidence that what you state directly above was ever true, nor do I care.

> Unfortunately, your meglomanaical view that everybody in the world agrees

> art of radio, right?

Wrong again. I have never substituted a wireline link of any sort for a wireless one, nor have I claimed to. What is your source that says that I have?

I never said that I didn't like (or dislike) TAPR. I don't live anywhere near Tucson, Arizona, nor have I ever. It is your misguided belief that they are more than a local organization that has confused the issue. They were and always have been nothing more than a local group of people with a common hobby, and to give them anything remotely resembling regional let alone national credence is simply delusional.

> LandLine Lid: Hams who communicate over the Internet and pretend that it is
> amateur radio.

I know what it means - and so does everyone else here (you don't see anyone asking, do you?).

>loss.

Get yerself an amortization printout and notice how little you pay off the
principal each month on a 30 year. Which means if you can come up with just
that much extra each month, you can take a month off for each month - or more.
And as you say, if you run into trouble you just don't put in the extra for a
while.

There's also a completely opposite philosophy that some folks use. They figure
it's *better* to *not* pay off the mortgage any faster than you have to,
because the interest is deductible if you itemize, and the lowest rate the
average person can get is for a first mortgage of their primary residence.
Instead, they say, pay off all your other debt or don't get into it in the
first place.

I guess the answer to that lies in whether you've personally benefited from that influence or not (or, to some extent, which piece of that influence you focus on). Certainly corporations and taxpayers aren't always thrilled by the influence, but those who benefited from the "New Deal," cheap transportation on modern highways, the minimum wage, women's participation in the workplace, and other things that impacted the economy, may have a slightly different opinion.

Technically, that's true, but there's no longer any ITU requirement for a code test for any band. I think at one time there were a lot of people who wanted HF who would have been waiting for the code test to go. This is probably no longer true, as the hobby has lost a lot of it's popularity since the Internet, and as the test speed is now only 5wpm.

However, my point is just that polling only licenced hams is just not appropriate, as hams are not the only interested parties.

I'm still waiting for her "wicca friends" to cast a spell on me to prove they actually can (a conversation we had many months ago). I posted that challenge after she expressed support for wiccan beliefs and got angry when I said it was all nonsense. After the challenge, she claimed Wicca's don't believe in spells. I then showed at least a dozen web sites, out of hundreds, where Wicca's do indeed claim they can cast spells and charms (including the type of spell in my challenge).

As for her callsign, Larry has taken that just about as far as it can go. I'm not offended by her callsign, but I certainly do think she could have made a better choice.

Hey, when did you move to Oregon, Phil? You were in SF the last time we talked, weren't you? If so, you move more then we do.

Ah, you ought to know the answer to that, Jim. Absolutely everything! I want to live in the country but have all the benefits of the city as close as possible. I want warm weather, but not too warm. I want a business nearby, but don't want to live near anywhere with enough traffic to actually support that business. I want to live near family, but certainly not too close (and haven't decide what too close is). I want to live near water, but don't want to pay the premium prices often associated with living near water. I think you get the idea. ;-)

It's easy all right, until the person tries to get things going again. I worked with a person who's SO declared bankruptcy after getting into a dumb purchase. It took years to get their credit back to something like normal. The one partner had to separate their credit from the other's, and then work the whole way up from the bottom. And that didn't help the person who went bankrupt, only allowed the other to get credit.

Regulatory matters are not decided by ballot or popularity polls. They are decided by an unemotional look at the facts and what is in the public interest. Thus the *quantity* of comments on the petitions is of no consequence --- all that matters are the facts and arguments presented. Most of the comments I have read are noticeably short on persuasive arguments for either side of the issue.

73, de Hans, K0HB

PS: Even if it were decided by "vote", the vote would be by the entire citizenry, not only those few already favored with a license.

Do you want it back? You can still use CB if you have an amateur ticket.
You're just not supposed to use your ham radio on it or cuss like a sailor.

I bet you do know, cranus the anus. "Freeband" operators are slime, and so are you...who cares if they have a ham license or not...they are all slime. You keykweenz use that bit about hams going there too to try to negate your own guilt, that's all.

I've had that happen fairly often as well. My rig's receiver seems to
"hear further" than
my rigs transmitter can "shout". But I heard a local ham also not get
heard by some
DX that didn't hear me. Probably a few too many contesters QRMing each
other.
It happens, no malice assumed or expected.

Is it an urban legend, or is there a reference to George Carlin's
published work
that contains that list in FCC "case law" or in an FCC rule? That way,
the FCC
doesn't have to mention directly the bad words, but just refers to a
reference?

Way back in the late 60's when I was in Catholic high school, and away
from adults
with direct authority over us (parents or teachers or cops) we sometimes
had
contests to who could out-vulgar each other. Like yelling dirty
comments from the
school bus as we passed our arch rival (football league) school.
Probably as
"venting steam" when away from the excessive discipline they used to do
in Catholic
schools back then (each nun was issued 15 inch rulers...). What they
call "child
abuse" nowadays. If "fear-loathing-hatred" = "respect", then we "respected"
authority. It didn't help things any when the entire class got punished for
something, whether or not if you individually were guilty of whatever it
was.

/rant

Anyway, the kids are likely just blowing off steam, purposly being
annoying to adults as a kind of payback for their teachers and parents
annoying them. You see it say when high school kids walk in the street
partially blocking traffic in areas where sidewalks are avaliable.
And kids using bad language in the Mall, "what are they gonna do
to us?".

Most young adults grow out of this by the time they get real jobs
(not McJobs) and ham licenses.

North/South paths were excellent, but East/West paths were non-symmetrical, which suggests a tilted ionosphere. The further north you were, the more exaggerated the effect was. I was hearing the W7/VE7's weak and watery, but they reported my signal as huge. Meanwhile W1/VE1's who I had 20-over were CQ'ing in my face.

Can't wait for CQWWCW!!! Maybe the freckles-del-Sol will be more cooperative.

Didn't think that could happen. I thought light (here radio waves)
would propagate
equally as well going as well as coming back. Like "If you can see my
face I also
can see your face".

I have numerous items of interest, Brian. I'm not sure that they'd be
of interest to you or that you'd understand them.

> If not, just keep it to yourself - please.

You've never come up with a straight answer for an explanation about
Frankline Roosevelt referring to himself as "President Roosevelt".

Imagine that the ionosphere is an imperfect mirror which reflects signals best when they arrive at some specific angle, and reflects less well when the signals do not arrive at that optimum angle. Now imagine that the "mirror" is tilted to favor one direction (your signals arrive at mirror at the right angle, but mine arrive at a more oblique angle and are consequently refracted more than reflected, and at the same time the reflection angle is such that my signals pass "over your head" to a more distant point.). I will hear you well, but my signal will be attenuated. From my end the skip appears "short", but from your end the skip will appear "long".

Only when the mirror is equidistant between us and when it is "flat" will the path be symmetrical and relative signal strengths reciprocal.

>
> Wasn't he called Grimmee or something? They even had a rap song about
> him. He used to make threats to kill people with a .45 pistol.

yes people would make fun of james carter then KE4CRM (pronounced
crummy)
james would go crazy when people would get him fired up, but after
many years of people jerking him, he finally listened to the other
users of the repeater when they had told him soooooo many times to
ignore the jammers and they will go away. finally he listened. now jim
doesnot give the jammers anything. they dont bother him much. one
jammer that has been on for years is "squeaky" he still tries jim
sometimes. the guy that made songs about jim is cedric, but i dont
know his last name or callsign, i have heard of the songs, some names
i remember are 640sucks (a take off of a rap song) another is
moproblems (a takeoff of the mo money mo problems song) theway (take
off of a eminem song, mentions coolaid, more about that in a bit). i
think they got played alot in 1999-2000 time line. jim carter changed
his callsign at some point to WA8JSC. one of jim carters worst
jammers, michael callanan has now taken the call KE4CRM (how about
that! the jammer took the old call of the guy he jammed) michael
callanans old call was KD4YOQ. callanan nolonger lives in the tampa
bay area, QRZ shows callanan now lives in newyork, that is if you look
up the call KE4CRM. another "crummy" jammer was a "steven f stout" or
"steve stout" now and then this steven stout guy will jam the
repeater, because from time to time someone will point out a type of
jamming as that of steven stout. stout has a criminal record also.
stout still lives in florida, i think his criminal record can be found
on the usenet by looking up his exact name in quotations. steven stout
never got a ham license, he likes radios but was not smart enough to
actually take the test. he was also an accomplice of michael callanan,
they cause all kinds of trouble when they get together, stout
considers himself a businessman, he has a website www.stevenstout.com
but it has been off line for a while now. "his saying on the main page
was "you had better check your financial books, because i think you
owe me money" stout was also associated with a group of guys that
started the site www.coldsex.com wich i think also comes up under a
usenet search that was part of a junk email someone got and posted to
the usenet. (this is just search information for the newsgroups).

this new KG4LEG guy is a real piece of work, (atleast jim wanted to
fit in with the group when people werent jerking him) this "coy roy"
guy doesnot even want to fit in, the repeater has been upside down for
5 days now! he just wont stop, no matter how much people try to get

him to fit in he wont. hes just a "mental midget" as some have called him. he talks to himself, he jams people, accuses people of using profanity with him, when no one did. one ham did some research on him, claims that KG4LEG calls the belleair bluffs police quite abit whenever people go driving buy his house, one ham had a CB expierence with roy 4 months ago, this ham decided to pay roy a visit, all he wanted to do was talk to roy in person, but roy called the police, roys wife told the police that he was threating them with a hand gun, and that got alot of heat on this particular ham, but when it was all said and done, this ham never had a gun, and the cops finally realized that. this morning roy was saying the "PUNK BOY" and "FAG BOY" frazes quite a bit to anyone, he was threating people and keying over them. numerous people have contacted the FCC, noone has said they FCC said they would do anything about ti. RON the repeater owner has said he has sent KG4LEG a letter stating roy must stop using the repeater, but roy claims he wont stop unless the FCC tells him, wich we all know will likely not happen. thats the update today.

Thanks!!!

I remember the QSO because of your suffix. Was tempted to make a wise remark like "Hey, thanks for the nice connection!", but was struggling for points at that time, so I didn't slow down for chit-chat. Sorry I didn't recognize it was you.

>60's and up getting those mortgages. Go figure.

Actually, now that I think about it, there is a certain twisted logic to it. In general, people are living longer now, so the chances of someone actually paying off the mortgage is better than before. Conversely, if the person dies, the mortgage company gets their money quickly, from the estate.

On top of all this, such policies insure that the mortgage companies don't have to worry about claims of age discrimination.

10 meters is quite dependent on the status of the sunspot cycle. When the
solar flux is good, the band is indeed heavily used but when the flux is
down, it won't support long distance communications.

How would you then define the group to be polled? Even polling just the licensed hams would be prohibitive in terms of postage as mentioned in other posts.

Was it me or my OM working the mike? Our goal was the clean sweep but we
just didn't get the propagation. I heard the PAC section but to weak for me
to be able to get through the pile up and we never did hear NT from here.
We ended up 10 sections short. Last year, when we weren't even trying we
were only 3 sections short.

If I thought it should be decided by a poll, and I'm by no means sure of
that, then it should be done on-line. Just have a web page where you click
your chosen response. Chicago voters might be a problem, though.

Imagine that the ionosphere is an imperfect mirror which reflects signals best when they arrive at some specific angle, and reflects less well when the signals do not arrive at that optimum angle. Now imagine that the "mirror" is tilted to favor one direction (your signals arrive at mirror at the right angle, but mine arrive at a more oblique angle and are consequently refracted more than reflected, and at the same time the reflection angle is such that my signals pass "over your head" to a more distant point.). I will hear you well, but my signal will be attenuated. From my end the skip appears "short", but from your end the skip will appear "long".

Only when the mirror is equidistant between us and when it is "flat" will the path be symmetrical and relative signal strengths reciprocal.

Somehow I would have thought that light (radio waves) could travel
either direction
on the same exact path. And that attenuation either way would be identical.
Same for the same set of multiple paths.

But it's been years since Physics class......

If your interest rate is less than 5%, the best loan to get is a 30 year!
It's cheap money. Paying off a house quick is foolish. And the monthly
rate is usually a hell of alot less too. Spend the difference of that
paying off bills or invest it in a mutual fund or something.

Instead of paying off that low interest loan quickly, one is smarter paying
off the higher interest loans like automobiles, department and credit card
charges, and other loans/debts.

I think what Jim was trying to say, that if a meal at Ma's diner averages say for instance $5.50, (and a good meal too) and the corporate conglomerate Taco Heaven is around $4.50 for instance, in some cases it is worthwhile supporting the locally owned, Ma's place versus some criminally corporate organization like Taco Heaven. Support the local business before supporting the corporate ones.....

And if you find out that all the corporate ones have squeezed out the family and/or locally owned ones, then what ever you have left is your own fault if you didn't support the local ones.

Maybe I am wrong, but that's what I got out of Jim's message, and might not have explained it the best. Myself? I believe in supporting the local businessperson whenever and where ever I can FIRST, then supporting the corporations when a locally owned option is not available. Granted there are some exceptions to the rule, as for instance, gasoline. At least I research to find out which ones are locally owned/franchised as opposed to true corporately owned gas stations.

Screw Corporate Amerika! (before they screw you)

If it were a ligitimate religion, no. However, it is a little hard to perceive wicca as a ligitimate religion. Since little is really known of the old pagan religions (especially directly), wicca practices today cannot seriously be linked to paganism. Instead, the practices today mostly seem made up from images and stories in movies, television, and fiction books (old and new). And the people involved often take on the personas of characters directly from those fiction stories. Further, their claims of spells, charms, and so on, are simply hogwash (childish hogwash). Everyone is certainly free to believe what they want, including those who consider the whole thing absolutely ludicrous.

By the way, this is not "us versus them." I have no specific religious beliefs, so pointing to a ligitimate religion is not really going to change my opinions of wicca. All religions have their faults and doubters, but I have no doubts about my opinions of wicca. :-)

> I wonder what the Book of Bokonon has to
> say about all that...

Wasn't it supposedly Books (plural) of Bokonon? Anyway, I'm not so sure all this (wicca) is exactly harmless untruths.

Yeah, sorta. Midland is the third city making up what is known around here
as the "Tri-Cities."

>
> Where I live, a 75K home is called a crack-house and a public
> nuisance.

Same here.... Although the math is regionally different around the country,
that 75K can buy an WONDERFUL home in Bay City or Saginaw, but barely buy an
empty lot in Midland in some or alot of cases.

>
> Location(cubed).
>
> If you have housing available at 75K, and it is suitable to your
> desires, and you have a steady job, go see your mortgage lender today!

My lender, is willing to back me to the amount of 40K, no money down,
stretched over 30 years! Now the hard part is finding a property within
Midland County that is close to that. Dilapidated trailers (literally
falling apart), with slimy welfare trash neighbors (renters not owners) with
more crap strewn within the yard still gets 50K or better!!!!!

(((I almost had a really cute 2 bedroom (very large bedrooms) about 2 months ago, after a long bidding war with the people that held the estate. They had it listed for 56K and I countered first with 35K. They countered with 47,500K. I countered again with 37,500 and they countered with 45K but would not budge from that. Now, since it was an estate, and I would be offering them CASH (yes, actual real paper money) for my last offer of 40K, ya think they would have jumped on that?? Problem there was about 6 people in the estate (the kids of the deceased) and not one could agree apparantely.)))

>
> Try to locate in a non-restricted neighborhood so that you can play
> radio.

Of course!! Dipoles strewn around the yard enough to catch birds with like it was an overgrown spiders web! LOL

Or, even better, if the mortgage isn't paid off, the mortgage company can foreclose and resell the house for a very tidy profit. That alone is enough to attract many mortgage companies to the elderly. This may also be why some mortgage companies actually seem to seek out those who will likely not fully pay off a mortgage (excessive debt, a history of bad credit, or whatever). After the mortgagor has partially paid down the amount owed on the property, the mortgage company can foreclose and retain the property for a much lower amount than they would have paid in an outright purchase.

Well to answer the questions below Jim, I guess an actual example of the houses I am referring to in this thread is more relevant to the conversation. A two or three bedroom house can actually take on different shapes and sizes.

The message originally was a comparision to the immediate surrounding counties and the property values in this county of which I live. It is merely something about Midland County!!!!!! In surrounding counties, that same 75K can get twice the house!!!!

real
> estate....

Yeah... most all of the properties I have considered are in the townships outside of the county seat/City of Midland which do not have all the benefits of certain things like city water, sewage, trash pickup, and in some case road maintenance as that is usually left up to the county. These are areas where the value listed is merely a function of how much the real estate agent wants to get as a commision on the property. The more he/she wants to make the higher the property value/listing price needs to be.....

>
> What are the taxes like?

Between 500 and 1000 dolllars yearly depending on what is on the property. (size etc.)

Jim.... of all the people here I thought for sure you would see where I was going with that..... it goes well beyond the "dirty words" and could extend to any speech undesireable by others that could be deemed offensive and therefor punishable. Heck, we have organizations in the US already trying that..... not a small step to extend to ham radio!
Like I said.... look beyond the cuss words, and there is a ton of things that some radical freaks could oppose.

My guess is that some moron years ago decided that these damned hamfest MUST occur at like 8am and that the guys going to them figured, " to hell with a shower! I will be back in a while"

I am sorry if this offends, but I shower twice a day, use deodorant/antiperspirant and wear clean, laundered clothing even if it is a t-shirt and shorts or jeans. Not saying having to dress in the sunday best but.....

I have seen better dressed homeless people in some cases!

> I wonder what the Book of Bokonon has to say about all that...

from the Last Rites of Bokonism....

God made mud.
God got lonesome.
So God said to some of the mud, "Sit up!"
"See all I've made," said God, "the hills, the sea, the sky, the stars."
And I was some of the mud that got to sit up and look around.
Lucky me, lucky mud.
I, mud, sat up and saw what a nice job God had done.
Nice going, God.
Nobody but you could have done it, God! I certainly couldn't have.
I feel very unimportant compared to You.
The only way I can feel the least bit important is to think of all the mud
that didn't even get to sit up and look around.
I got so much, and most mud got so little.
Thank you for the honor!
Now mud lies down again and goes to sleep.
What memories for mud to have!
What interesting other kinds of sitting-up mud I met!
I loved everything I saw!
Good night.
I will go to heaven now.
I can hardly wait...
To find out for certain what my wampeter was...
And who was in my karass...
And all the good things our karass did for you.
Amen.

You'd think so, but 'taint so.

And if you spend any time on HF during disturbed solar condx, you will
receive many vivid demonstrations of non-reciprocal/non-symmetrical
propagation paths.

The ionosphere is not like a mirror, as Hans stated. And from what I understand the waves don't actually bounce, but they are bent back towards earth.

Yep, I wasn't feeling too well on Saturday. My other op couldn't make it.
So I did mostly search and pounce on Saturday.

On Sunday towards the mid day I started CQing. Managed 434 qso's, 76 out
of 80 sections. Not good. But considering it all...hi.

See ya down the log.

Ahh, a financial truism! This belongs with:

The stock market ALWAYS goes up!

(It soitanly do, but over long time periods that are not relevant to
most of us who don't live over 150 years. More importantly it is what
the market is doing around the time you take your money out.)

Move your money into high yield accounts shortly before you retire, that
way you'll have more money when you retire!

I've listened to investment consultants actually pull this one out of
their hats. I know some older folk who have done this and now have
almost no retirement funds.

I have to chuckle at your truism. first, because your friend the real
estate agent uses those sort of arguments to talk you into buying
several thousand or tens of thousands more dollars worht of house.
Second is that You are saying a person who gets out of debt is foolish.

Best way to not be a fool is to not go heavily into debt in the first
place. I have a 5 percent loan, but I'll pay it off quickly, I think.

> Instead of paying off that low interest loan quickly, one is smarter paying
> off the higher interest loans like automobiles, department and credit card
> charges, and other loans/debts.

Again, it's better to not get into a situation where you would have to
choose which loan you're paying off early.

That's "skew path" propagation. It's actually pretty common, but you don't notice it so much when we're high in the sunspot cycle curve. At solar-flux minimum, however, it becomes more noticed because you are more likely to "tweak" your beam azimuth to wring that last little half-dB of signal strength. Also, it seems more prevalent on the lower bands, below 10MHz, which otherwise can get hammered by auroral zone absorption.

From here in the midwest, the skew path to EU is toward western Africa, almost 45 degrees of the normal azimuth. During CQWW I often work from W0AIH's superstation (http://www.qth.com/w0aih/), and use the Africa rhombic to work Europe --- it's non-intuitive, but you can really roll up a score on 80M!

We do not shop there because we do not like their business attitudes
in specific areas - hiring folks desperate for a job but only for 19
hours a week not to exceed two years' tenure, thereby avoiding
paying much above minimum wage and granting no employee benefits,
certain shenanigans about forced unpaid hours (subject of several
lawsuits across the country), and trashing the local merchants and
moving on whenever they pleased, leaving disaster in their wake.

Our choice.

ok, heres an update, i have been all over the net tracking down info
on this cedric jammer guy, got lots of info now..
his real name is cedric harris
he has a email address of coolaidcb13@hotmail.com
he has a callsign KF4ZCG
he has several websites (one of wich has some anti 146.640 repeater
songs)
http://geocities.com/kf4zcg/ (current site)
http://www.angelfire.com/on2/rifleman (older site and not up)

his CB information is

Coolaid Kid (213)
Tampa Florida
Former Host of the 27.115 Beer Break

QRZ shows cedric's callsign and address to be

KF4ZCG Lookups: 1101 (looked up on 11/17/03)
Cedric C Harris
2119 29 Ave N
Saint Petersburg FL 33713
USA

Hi all, Thanks for looking me up. I am 18 years old, I have been into
ham radio since 1998 and I have been into electronics for over a
decade now. I am usually on 2,10,15, or 40 meters. I talk everywhere
though. Seeya on the air.
And don't forget to check into the Sparc Nightly Net on 147.060 at
6:30PM!
73 Cedric KF4ZCG

finally kg4leg has been at it again today, N0JAM shannon (calls it the
"fell sorry for me net")
kg4leg also hates KF4GAH (and likewise) they apparently rant back and
forth on CB. kg4leg was rebroadcasting a spot on cb over the 146.640
repeater when KF4GAH was yelling at him over the CB last night

will keep the post updated for archiving purposes

As W4NTI points out, the ionosphere isn't really a reflector - it's a
refractor. The waves are bent, not bounced.

When the ionosphere is stable and uniform, it behaves *like* a mirror,
and the 2 way reciprocity thing works well. But when it's tilted,
twisted or otherwise distorted, the refraction in one direction may be
different than in the opposite direction.

As an analogy, think of "one way" mirrors in optics and how they
behave under the right conditions.

BOY! How much you THINK you know! It gets used
a LOT! And some of it is in a "language" you are unlikely to
understand----you know, them pesky "dots and dashes" in addition to SSB, AM
and FM.

It's not as lucrative as you make it sound, Dwight. Also, these people
are reasonably well off, retiring with money equivalent to upper middle
class or better.

> This may also be why some
> mortgage companies actually seem to seek out those who will likely not fully

Hmm, there are some places I've seen that seem to cater to those
without stellar credit ratings, but they are places like
furniture/appliance/electronics rental places. Plus deadbeats have a
tendency to default pretty quickly, so a mortgage company would have a
real nuisance on thie hands.

Again, it STILL shows how much you know about 10 meters. There are lots of
operators that have regular QSOs on 10 whether the "skip" is runnning or
not. Many groups gather on various frequencies for nightly chats. These
chat groups do so at ranges of 5-50 miles--sometimes more. We are NOT
always looking from
truckers. They are not supposed to be there anyhow.
But you can be sure of one thing: sources tell me that
there are more of them fixin' to get a "surprise". LOL!

Sure - but as I read that, (insert standard "layman, not a lawyer" disclaimer
here) that means the ARS cannot go beyond what the BC services can do. IOW the
ARS "lower bound of decency" cannot be lower than that of the BC services.

I still believe in common sense and good taste, old-fashioned as that may seem.
Discussing one's gastrointestinal problems in detail on the air may be legal
but that doesn't make it acceptable....

I never hear that sort of stuff in CW ragchews, btw.

>Heck, we have organizations in the US already
>trying that..... not a small step to extend to ham radio!

You mean like folks who say the press is "liberally biased" or "beholden to big
business" when it reports things they don't like?

>Like I said.... look beyond the cuss words, and there is a ton of things
>that some radical freaks could oppose.
>
Sure. But limiting what can be said on the amateur bands is not an incursion
into free speech, because the amateur bands are public property.

Okay.... I'll take a stab at this one..... Who the hell said it's required to be long distance to be useful??

I know personally of some people around here in the Lower Peninsula who on a regular basis communicate on 10 meters and one is near Midland and the other is near Traverse City. And yes, these are pcta extra class licensee's. Guesstimation of around 50-75 miles with 100-200 watts.......

It's not necessarily the quantity of the QSO, as much as the QUALITY of the QSO in my book. If I can have a really enjoyable conversation with someone, even to the level of earning the ragchew award, and to where I learn about that person and their likes, dislikes, hobbies and interests and so on, that to me is the most rewarding conversation.

Actually Jim, I think the things I am gonna mention are what are called reverse mortgages.

My dad (going on 68) is contemplating taking both of his residences and reverse mortgaging them. Apparently the bank gives him money ahead of time for the value of the house (a little less than market value) and upon his death, the property is immediately transferred to the mortgage company. I may be a little bit off on the explanation but it is kinda my understanding of how it works. I guess this way he gets the opportunity to enjoy the money/value of the residences now, while he is still alive, as opposed to leaving it to my sister and I.

What goes up must come down as well too. But that is the beauty of the
stock market. It is a cyclical thing. Ideally it would be like a good
sinus rhythm. It is just merely the knowledge of where to jump in at.

Actually the person I got this truism from and believe in it is Bruce
Williams, the talkshow host. If you do the math, it is fairly true.

>
> Best way to not be a fool is to not go heavily into debt in the first
> place. I have a 5 percent loan, but I'll pay it off quickly, I think.

I wouldn't but thats me. What I would do is see if you can refinance at all to a lower rate. I have actually seen a interest rate recently somewhere in the 3 percent range!! Talk about a cheap loan, hell, I would refinance/remortgage my neighbors house if I could legally get away with it! LOL

>
> > Instead of paying off that low interest loan quickly, one is smarter paying

Well, its not paying the principle that kills ya, its the interest that does over a long time. The lesser the interest rate, the less I am interested in rushing to pay it off extra early. Either way, one needs to do the math or find someone who does understand real estate finance and other financal calculations to make sure in their own individual circumstances.

>Regulatory matters are not decided by ballot or popularity polls.

In some cases, they are. And in most cases the popularity of an issue has at least some influence.

Do you think we'd still have code testing in the USA today if, back in 1998, there had been an overwhelming majority of support for NCI's "5 wpm and sunset clause" idea?

>They are
>decided by an unemotional look at the facts and what is in the public
>interest.

Ideally, yes. In practice, that's rare. For example, is the homogenization of broadcast radio brought about by "deregulation" of ownership in the public interest? How about BPL and the prophecy of 'broadband nirvana" - is that in the public interest?

If such matters "are decided by an unemotional look at the facts and what is in the public interest", why do so commenters/petitioners give a biography of their education and experience in their commentary? Shouldn't the facts speak for themselves, and not depend on who is saying them?

>Thus the *quantity* of comments on the petitions is of no
>consequence --- all that matters are the facts and arguments presented.

I disagree. Of course, popularity alone is not the deciding factor. Nor should it be. But popularity does have an effect in most regulatory decisions.

>Most
>of the comments I have read are noticeably short on persuasive arguments for
>either side of the issue.
>
Agreed!

>Even if it were decided by "vote", the vote would be by the entire
>citizenry, not only those few already favored with a license.

Anyone can petition to or comment to the FCC, but in amateur license matters there are very few outside of licensed amateurs, amateur organizations and manufacturers of amater equipment who bother to comment.

Almost *anyone* can pass the Technician test and get a license - that's been proven by the licensing of young children. So almost anyone who is really interested in being included in such a poll can get a license, just as almost any citizen over 18 who is interested in voting can register to vote.

Well, I know we've talked more recently than four years ago. I guess I just didn't know about the move. Anyway, we considered moving to the Grants Pass/Medford/Ashland area a few years ago, or perhaps even Coos Bay (in other words, the Southwestern part of the State). In fact, we may still do so - it's on the short list of possible places to move. I was in Sacramento in 1967.

I have no idea how lucrative it is. An acquaintance (hard to call this guy a friend) works for a mortgage company and just loves to talk about the shady side of that industry. The company he works for (a nation-wide franchise chain) just switched to more agressive foreclosure practices and, based on the stories he tells, I most certainly would not want to be a customer of that company. Of course, this company has always had questionable (in my opinion) foreclosure practices. He told me years ago (late 80's, early 90's) that, mainly because of increasing property values, it was far more profitable to foreclose on older properties than to maintain the mortgage. As such, the company used every opportunity to foreclose on those mortgages. Today, according to him, long term mortgage foreclosure offers the most gain. Therefore, they now actively seek those who have the greatest possibility of foreclosure years from now, such as the elderly, those with speading habits that suggest possible credit problems down the road, and so on. Now, since I don't work in that industry, I have no idea if this is entirely true or even widespread. But, I've seen enough written about these types of practices to suggest there is at least some truth to it.

A couple years back, People Magazine ran an online vote for "Most Beautiful Person of the Year" on their website. This was shortly after the movie "Titanic" was released. People's "choice " was for Leonardo DeCaprio to run away with the honors (go figure!)

Well the word got around in the newsgroups that this was going on, and the suggestion was made to all newsgroupies to go to the page and do a write-in vote for "Hank, the angry drunken dwarf"

http://www.hankthedwarf.com/plain/frameset.html

Hank was definitely NOT one of the "beautiful people", and was a perfect foil for the shallow business of celebrity worship as practiced by the likes of People magazine. Unfortunately, Hank's "lifestyle" caught up with him at an amazingly early age, and he is no longer with us.

But he and hundreds of thousands of newsgroupies spanked People magazine a good one:

http://www.hankthedwarf.com/flash_dynamic/news.html

Quote:

PEOPLE ONLINE
MAY 1998
Hank the Angry Drunken Dwarf wins People Online's Most Beautiful Person in the World Poll receiving 230,169 votes dwarfing runner up Leonardo DiCaprio and Rick Flair by over 200,000 votes.

People Online's articles after the spectacle said: "Though we're hardly novices at handling online polls--this was out sixth--nothing could have prepared us for the agony, the ecstacyï¿½and well, the angry, drunken dwarf."

But my point in all this is:

Internet polls mean absolutely nothing whatsoever! I voted for Hank three times in that poll, and if it happened today, I could vote for him five times without trying. If I tried, I suppose I could give him around 300 votes or so.

This is the internet, and online voting won't work.

That's why I mentionned 'Chicago voters'. With apologies to anyone reading this in Chicago, the town is famous for voting fraud. The term 'Chicago voter' has been used to mean someone casting a vote on behalf of a dead person. As you point out, in most Internet polls that isn't even necessary, as no ID is submitted. That doesn't mean that there is no solution, though. Some form of pre-registration process would be needed.

The *original* w2-y has been dead for over 36 Years.

Amazing how things NEVER EVER EVER change
on ham radio. Even their brand of "humor" is just as lame and
pathetic as it was 3 Decades ago.

The only REAL spark of potential inspiration to happen to ham radio was the
late
WA4D. (SK) Now there was a Ham Radio Messiah if there
ever was one !!!!! Of course, just like the other guy, he was
nailed to a tree by the bluebloods and stinky cheeses at
the ARRL, the Sanhedrin of Ham Radio. I count myself as very fortunate
having worked
ole Mike WA4D before he passed on. I even have one of his VERY
COLLECTABLE signed and autographed QSL Cards.
The famous QSL where he was standing outside the Laurel Md
FCC Monitoring station with a flag in hand and a shit-eating
grin on his face. That card is on my radio room wall in a brass and glass
picture frame with a light over it. It's right alongside my autographed
8 by 10 Photo of Bill and Hillary which I rcvd at a luncheon I was
invited to.

Is this World f-cked up or what??

Believe it or not, the comedy routine was aired as part of an academic program series on how language affects civilization, not in an attempt by the station to flaut "authority".

The FCC, in response to the listener's complaint, sent Pacifica Foundation (the licensee) a letter in essence saying "take care not to overstep the boundary of indecency". When the FCC declined to define the boundary (almost the venerable "you'll know it when it happens" stance so popular in that time), Pacifica, not the FCC, took the matter to court to force the issue.

The "unintended consequences" are well known.....

The text of the routine, BTW, is printed out in full as an attachment to the decision of the Supreme Court of the U.S. (Pacifica v FCC).

the proper response when you see one of these:

The following is the information you requested from the FCC Consumer Center.
Thank you for your inquiry.

FCC CONSUMER ALERT

Federal Communications Commission

Consumer and Governmental Affairs Bureau

445 12th Street, SW Washington, DC 20554

1-888-CALL-FCC (voice)

1-888-835-5322 (TTY)

www.fcc.gov/cgb

UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

The Federal Communications Commission receives hundreds of complaints about
alleged illegal (non-FCC certified) equipment being offered for sale on the
Internet or in publications. The Commission is monitoring this situation
carefully and requests your assistance. If you have any information about
illegal or uncertified equipment being offered for sale, please forward it
to the FCC. Useful information for the FCC includes:

* An original advertisement or Web address where the illegal equipment is

being advertised or offered for sale with the types of equipment about which

the allegations are being made, highlighted.

* If it is a Web-auction we will need the name of the auction site, the
exact

item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s) for sale.

* Complainant's name and telephone number in the event follow-up is necessary.

This information can remain confidential, if requested.

* Specifically, why you think the equipment is not in compliance with FCC rules.

* Number of pieces or types of equipment about which the allegations are being

made (one piece, five pieces, how many models, etc.).

Yep. That's it. The bank loans him a little bit of money each month (or whatever period) and adds it to the loan balance. If he lasts long enough he will be paid the full amount of the house and the bank owns it.

Well, aside from the web address having "cb" embedded in it, they don't
specify that these things are not intended for ham radio service.... ;-)
Though I've never seen ham equipment with model numbers like
"SUPER CHICKEN SNUFFER", "FROG STRANGLER 5 PILL",
"WIDOWMAKER 16 PILL", and "DIRTY DOZEN 12 PILL". That last
may describe that item well if it generates lots of harmonics.

And they didn't mention how much drive is needed to work these amps.
It may be less than the usual 100W a ham transciever puts out. ;-)

That's certainly one reason.

But I have it on good authority that FCC does place some value on the
"credentials" of the person making the comments.

Perhaps K2ASP would comment on this.

Not at all.

More like "I'm interested enough in the ARS to join".

Do you place much credence in the political opinions of someone who could
legally vote, but won't even take the time to register?

> Dave K8MN

I took an excerpt from someone else's material. The part in the quotation marks is Franklin[e] Roosevelt's quote. You typically find quotes within quatation marks, or at least I do. Do you have trouble identifying quotation marks? Please let me help you.

They look like this: "quoted material"

Please notice that the quoted material really is within the quotation marks.

The material is then referenced to a web site where I encouraged readers to click and read the entire article for themselves. Do you have trouble clicking on a hyperlink? Please let me help you.

Using the mouse, navigate your cursor to the location of the hyperlink. When the cursor is over the hyperlink, left click once. It really is that simple, and I'm glad to have been of assistance.

After this little episode of educating you yet another time, your self-imposed stupidity cannot be excused any longer. Please deal with it in a more constructive manner.

What difference does it make? The number of countries that
have ended or are scheduled to end code testing can
only increase. Not a single of those countries is ever
likly to change back (IMHO).

So I ask again, what difference does it make?

Cheers,

>
> 73 de Jim, N2EY

First off, your analogy is flaccid at best. In order to register to vote, I generally need only to reveal my place of residence (with evidence like an ID card, or be vouched for by another person registered to vote in the jurisdiction). I need not take any written or skills test, nor pay any examination fee, nor demonstrate any particular knowledge of the issues. (In fact such impediments to registering/voting used to exist in some jurisdictions, notably in the south, and are deemed unconstitutional.) It speaks volumes that you'd suggest such impediments to comment on something as mundane as regulations regarding a hobby radio service.

Second off, regardless of the applicability of your analogy, I do not judge a persons political opinion based on whether he/she has taken the time to register to vote. (I don't even raise that question, because it is irrelevant to the value I place on their opinion.) I attach credence to their opinion based on their ability to make well constructed arguments, to succinctly state their views without resort to emotion or clich&#65533;, and evidence that they may have considered alternate or opposing views.

The fact that you have an amateur license suggests that you will have an opinion about amateur radio regulation, but it gives no credence in and of itself whether your opinion is or is not worthy of consideration. Similarly a non-licensed individual may have an opinion but lack of a license similarly gives no credence in and of itself whether that opinion is or is not worthy of consideration.

Thus your "almost anyone who is really interested in being included in such a poll can get a license" strikes me as just another version of the discredited practice of 'poll taxes' by which privileged persons attempted

to limit the influence of 'lesser' (in their pecking order) persons in political affairs.

I don't see how your mileage can vary.

Maybe. It's been almost half a year since WRC 2003 removed the treaty requirement, yet less than a dozen countries have dropped or have announced the dropping of code tests. The US isn't one of them.

Some say FCC could announce the suspension of Element 1 tomorrow. Others say it takes a full NPRM process. Typical NPRM cycle in the ARS takes so long that we're talking 2005.....just look at 98-143. The NPRM appeared somewhere in the middle of 1998 but the changes that resulted weren't effective until April of 2000.

It will be interesting to see what happens to amateur radio in the countries
where code testing has been eliminated. For example, will we see a sustained
increase in growth?

G'Day Folks,

If there is NO CW requirement for ANY ham license
in Australia, some VK hams don't yet know about it
and I'm one of them.

The ACA (Australian Communications Authority) had
many meetings all over Australia in the last few months.
Their purpose was to present their proposed rule changes
which were many. Dropping all CW requirements was
one item. Faulting the ham for EVERY problem of
interference with ANYTHING was another. The
latter caused quite a stir and threatened to incite a
rebellion! Few seemed to care about CW one way
or another.

The many issues, I've mentioned only two, are still
under advisement as best my associates in OZ know.
No action is expected for a couple years.

OK, that's what I've heard. I may be wrong, if so
please let me know and please cite a verifiable source!

Cheers,

Bill VK6KM

Sorry, little electrolyte, you wrote "Franklin Roosevelt is to have
said:". That was followed by more material copied from a web site by
you. Just because you provide links to material does not obligate me to
use them or even to feign interest in doing so. Now, let's take a look
at what you cribbed and posted:

Quote
Concerning the "Bonus Army" of 1932, where veterans of The War to End
All Wars (1917/1918) were due a bonus in 1945, but wanted payment
early because they lost their homes in the Great Depression, Franklin
Roosevelt is to have said:

In the end, some money was paid to veterans but not without further difficulties. Within a year of the Bonus Army Incident, President Roosevelt imposed the Economy Act of 1933 which cut veterans disability allowances by 25%. In the effort to cut federal expenses, veterans were viewed as having inordinate special status over civilians. During the 1932 election campaign, he had publicly proclaimed: "No one [merely] because he wore a uniform must therefore be placed in a special class of beneficiaries over and above all other citizens. The fact of wearing a uniform does not mean that he can demand and receive from his government a benefit which no other citizen receives."
end quote ======================

Now, what do you make of that colon hanging at the end of "Franklin Roosevelt is to have said:"? What does it indicate to you.

You can't place blame on me because you can't get your act together. If what you posted wasn't what you meant to convey or if the words aren't yours (since you've ignored common English rules for quoting someone else), perhaps you'll want to look the material over next time.

Hey, Barney,

Flap over this one then......

With all kind wishes,

de Hans, K0HB

Commonwealth of Australia
AUSTRALIAN COMMUNICATIONS AUTHORITY

REVIEW OF AMATEUR SERVICE REGULATION

The Australian Communications Authority (ACA) is reviewing regulatory and licensing arrangements for the amateur service. A discussion paper was released
in August 2003, and public meetings were held in 10 cities around Australia. As a result of this extensive public consultation process, the ACA has decided
to discontinue the Morse code proficiency requirement for the amateur service.

Background

Article 25 of the Radio Regulations of the International Telecommunication Union (ITU) sets out the international arrangements for the amateur service. The
World Radiocommunication Conference (WRC) held from 9 June to 4 July 2003 in Geneva fundamentally changed Article 25.

The changes to Article 25 have provided the ACA with an opportunity to review
and simplify the current regulatory and licensing arrangements for the amateur service. In August 2003 the ACA released a discussion paper that looked at
the changes made to Article 25, as well as exploring future options for the amateur service in Australia.

Morse code proficiency requirement to be removed

As a result of an extensive public consultation process, the ACA has decided to discontinue the Morse code proficiency requirement for the amateur service.

This decision was made considering public comments at the meetings and initial analysis of submissions to the discussion paper.

The ACA will make interim changes to legislative instruments which will immediately allow access to privileges previously available only to those satisfying Morse code proficiency requirements.

The ACA is in the process of amending the amateur radio licence conditions specified in the Radiocommunications Licence Conditions (Amateur Licence) Determination No. 1 of 1997 to reflect this decision. The amendments will give:
holders of Intermediate and Limited Amateur licences access to the same frequency bands as Unrestricted Amateur licensees; and holders of the Novice Limited Amateur licence access to the same frequency bands as Novice licensees. The
interim arrangements are expected to come into force on 1 January 2004.

For more details about the arrangements, please refer to the <A HREF="http://www.aca.gov.au/aca_home/issues_for_comment/discussion/archive/FAQ_morse_removal.pdf">Frequently Asked
Questions</A>.

Public Meetings

As part of the consultation process for this review, the ACA held public meetings in cities around Australia. Over 700, or approximately 5% of the 14,000
licensed amateur radio operators in Australia, attended the meetings to discuss the proposals in the discussion paper and seek clarification on particular
issues.

The ACA would like to thank everyone who attended the meetings, especially those who travelled long distances to attend. The ACA received some useful and
constructive feedback on the proposals contained in the discussion paper, and
will consider this feedback when considering the proposals.

Submissions

Submissions to the discussion paper closed on 31 October 2003.

The ACA would like to thank everyone who submitted comments to the discussion
paper. Approximately 1400 submissions were received, and the ACA will work through them over the next few months.

The ACA hopes to have submissions published on the website by Christmas.

For further information on the review please contact:

The FCC doesn't go by the number of "votes" on a petition. One well
reasoned
comment can out-rule many "me too" comments.

Reffering to the old man leaving money to the kids, versus enjoying it now??
He stated a long time ago, that my sister gets everything! Don't really
care as long as he doesn't leave expenses we might be liable for. I have
actually provided for myself since I moved out after I turned 18. Now if
others want to leave me in their will, that is just fine HIHI! :)

Well, overpurchasing is another different symptom alltogether..... I see that all the time around here. People buying 300K-500K homes, and 50K or more in vehicles, and another 25-100K in recreational type of vehicles (boats, quadrunners, motorcycles, snowmobiles etc.) but only making 75K-100K per year!!!! Hmmmm maybe it would be wiser to save up for some of these purchases other than the residence. Who knows.....

As far as the residence, and again I state that I am referring to local conditions, a person can find a really nice 3 or 4 bedroom house, with basement and garage, in a decent neighborhood for around 130-170K. Wouldn't it make more sense to live in that house for a while and then when move up as your finances truly allow as opposed to buying houses (or vehicles for that matter) that are way over what wages allow, being way over in debt, just to impress either oneself or others???

The type of house I was referring to in the earlier thread, the under 75K house would be more along the lines of somewhere a bit out of the ghetto

(generically based comment and not racially intended as there are ghettos in almost all towns and cities) but definitely not the mid or higher value neighborhoods. Hell, out in the country around here, even an old 14x70 trailer/mobile home on a half/three-quarter/full acre lot still commands a price of over 50K!!!!!!!!! Again, regional differences must be recognized.....

No, actually, the opposite. The right-wingers who want to control others
thoughts, what they read, what they believe in, what people should do to
their bodies and put in their bodies, and make it damn near a profession of

forcing this on others. Hmmm.... Rush Limbaugh, our nation's largest hypocrite, is a prime example. (do as I say, not do as I do mentality) Hmmm.... Pat Buchanan was a Republicrat, and also, if Hitler was alive and well today, and living in the US, he most likely would have been a Republican/Republicrat.

Actually, if one is truly a person that believes in the most of limiting government intrusions of our lives etc., then that person should actually be against all licensing of radio waves. Really, when you get to the point of it, NO ONE actually OWNS the airwaves. But in reality, there is a need for some type of regulation otherwise the chaos that would be there if it wasn't would be tremendous. I personally believe, if the acronym is correct, the ECPA should be deemed illegal. (refernce the ban on cell phone recption.)

That was kinda the intent of what I was speaking of. And of course, who
makes the decisions on that if it is not the FCC.

It makes a difference especially in areas, where people frequently
travel or move abroad.

During the transition period, when some countries have removed the
Morse test requirement and some have not, there is quite a mess where
it is possible to operate on HF without a Morse test.

The legal status of the CEPT recommendations T/R 61-01 and T/R 61-02
is unknown, since updated version is still on the (hopefully) final
request for comments period, which ends at the end of this month. When
Finland removed the Morse test requirement starting at November 1st,
the initially proposed regulatory text contained references to the
updated CEPT recommendations, but since these recommendations were not
final at the end of last month, the references to these
recommendations were removed from the Finnish regulatory text.

My guess is that at least most European countries will remove the
Morse test requirement within the next two years, during which period
there is going to be a mess for all those travelling abroad. There was
already a mess a few years ago with the HAREC licenses, when some
countries dropped the speed from 12 WPM to 5 WPM before the HAREC
recommendation was updated.

After this transitional period there will still be countries that will
require "forever" the Morse test. These are most likely countries that
insisted prior to WRC03 that the wording in RR should allow each
administration to decide if the Morse test is required or not (while
most countries supported completely removing the requirement from the
Radio Regulations).

Especially for new hams that have never taken any Morse tests,
travelling to such countries would probably require taking a Morse
test in that country for HF access. There might be some problem taking

the test in the local language (and possibly using the Morse alphabet used in that country).

I am not sure you are entirely right, Paul. Where reciprocal agreements are in place, someone with the stipulated class of licence will be able to operate with the agreed priviledges, regardless of how they obtained the licence (saving any nationality or residence restrictions, or limitations on using a reciprocal licence to gain further reciprocal priviledges).

If the Morse test is abolished in one's own country, and you obtain a licence without passing a code test, you will be able to operate HF in countries that honour your licence under a reciprocal agreement, even if a Morse test is still required in that country.

This will create many odd anomalies, of course.

CEPT may work out slightly differently. Classes 1 and 2 have been merged, but most national regulations still refer to them seperately, and most licences still refer to one or the other. So, for a while, codeless hams may not get HF priviledges under CEPT when they travel. If their licence refers to a non-existent class 2, and the regs of the host country say that the non-existent class 2s can only operate above 144 MHz, then that's all they get.

Once their licence no longer says class 1 or class 2, I assume they would get class 1 priviledges, even if the national rules of where they are going remain unchanged and there is still a Morse test there.

Of course, the US issues a separate CEPT letter that you can download, but the FCC hasn't abolished code testing yet, so I doubt that the text of the letter will be altered yet. It's a good question, though. Presumably the FCC should alter the letter anyway, to simply give Techs and above CEPT operation. This is theoretically unrelated to whether code testing still exists in the US.

There again, the FCC letter contains limitations on citizenship, even though there are none in the CEPT agreement, and never have been. There is an FCC rule that you must be a citizen of the country that issued your licence to operate in the US under the CEPT, mirroring a similar rule applying to reciprocal agreements. However, the letter says you must be a US citizen to operate using a US licence under CEPT, even though there is nothing to that effect either in FCC rules or in the CEPT agreement. This

additional limitation exists only in the letter itself, and nowhere else.

Amateur Radio Newsline™ Report 1370 - November 14, 2003

Amateur Radio Newsline report number 1370 with a release date of Friday, November 14, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Internationally sponsored ham radio training begins in Albania, UOSat-14 goes QRT for good and ARISS honors the late Roy Neal, K6DUE, with an on the air -- space to ground event. The details on Amateur Radio Newsline report number 1370 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: AUSTRALIA TO BE CODE FREE

The Australian Communications Authority has announced to QNEWS that as of January First 2004 CW will no longer be a requirement for Amateurs to operate on the HF bands. From Monday November 17th, the ACA website will have the press release under the signature of Dr. Bob Horton. Full details on next weeks Amateur Radio Newsline report. (Q-News)

**

RADIO EDUCATION: AMATEUR RADIO PROGRAM OPENS IN ALBANIA

We told you a few weeks ago that it was going to happen and now it has. Ham radio training is now available in Albania. Jeramy Boot, G4NJH, in the U.K. takes an in-depth look at the new internationally sponsored training program:

--

A unique amateur radio program started in Tirana, Albania the 9th of November. Thirty-four third and fourth-year university students began a five-week amateur radio course using RSGB study material as the reference books.

The course will culminate in CEPT license examinations. It is being run in cooperation with Mr. Spartak Poci, the Albanian Minister of Telecommunications, and the Polytechnic University of Tirana.

A unique part of the program is the way in which amateur radio is being integrated into the regular university courses. The course will not only teach amateur radio up to the RAE Full-license standard, but also the role of amateur radio in society, QSL'ing practices and successful Dxpeditioning.

During the five-week period, ZA1A will be active on many bands and modes while demonstrating amateur radio to local telecom and education administrators, as well as to the students. Multiple locations will be used and several stations may be active at the same time. After the course, all the donated equipment will serve the amateur community.

Jeramy Boot, G4NJH, in Nottingham, the U.K.
--

This unique, one-of-a-kind ham radio training program is supported by Region 1 of the International Amateur Radio Union. Additional assistance comes from several national ham radio societies, the Northern California D-X Foundation, Vertex Standard, Fluidmotion Corporation, Malev Airlines and the Rogner Europark Hotel in Tirana Albania. (RSGB, OH2BH)

**

RESTRUCTURING: SWEDEN MAY GO CODEFREE

Sweden could be next nation to drop the Morse requirement for ham radio licensing and end C-W testing.

The November issue of the Swedish national amateur radio society's magazine, QTC, says -- and we quote: "Soon - very soon - the requirement for knowledge of C-W for High Frequency band access will be dropped for the country's would-be amateurs and current Class 2 amateurs".

SM0SMK is the President of the Swedish national society. He says that they hope the Morse code test requirement will be removed at the end of the year. (GB2RS)

**

HAM RADIO IN SPACE: OSCAR 14 GOES SILENT

One of ham radios most popular emergency communications Easy Sats has gone Q-R-T. This with word from the Surrey Space Center that U-Oh-Sat Oscar 14 has finally reached the end of its mission after an amazing 14 years in day to day service.

Launched in January of 1990, U-Oh-14 was the first 9.6 kilobit per second amateur digital communications satellite. It literally pioneered the packet satellite or PacSat concept.

After about 14 months on-orbit, U-Oh-14 was switched to commercial frequencies for humanitarian service by an organization called Satelife. It was used by them until 1997 when it was returned to Amateur Radio service and configured as an F-M repeater in space.

A failure of one of the cells of its on-board battery supply is keeping the entire pack from recharging from the satellites solar array. This causes the transmitter to shut down shortly after it is commanded on. This situation lead to the decision by controllers to terminate the

micro satellites mission after more than 72,000 orbits of the planet. (RSGB)

**

RADIO HONORS: ARISS TO CELEBRATE THE LEGACY OF ROY NEAL, K6DUE

The Amateur Radio on the International Space Station team will be honoring the memory and the legacy of the late Roy Neal, K6DUE. This, with an operating event involving the crew on the orbiting outpost and hams on the ground. Amateur Radio Newsline's Norm Seeley is here with the details:

--

In a joint release, Frank Bauer, KA3HDO and Sergej Samburov, RV3DR of the ARISS International team say that the event is being held to commemorate Roy Neal's vision and dedication. This, in the development of manned Amateur Radio space communications.

And as a celebration of Roy's contributions ARISS has requested that the current I-S-S crew take to the airwaves the weekend of November 29th and 30th to communicate with as many ground based amateur radio operators as they can. After the initial two days, the operation will continue through the month of December using both voice and packet.

Ham radio from the International Space Station signals will be on the usual frequencies. These are 145.80 MHz as the worldwide voice and packet downlink. That's where you listen.

The worldwide packet radio uplink channel is 145.99 MHz. 144.49 MHz is the voice uplink for the America's and the Pacific while 145.20 MHz is where to call if you are in Europe, Central Asia and Africa.

Roy Neal, K6DUE, died last August 15th due to complications following heart valve replacement surgery. He is very much missed by everyone in the world wide ham radio community especially by us here it the Amateur Radio Newsline where he was a friend and colleague.

The full text of the ARISS International release about this special operation commemorating Roy Neal's contributions to manned ham radio in space is now at our website. That URL is www.arnewsline.org. Scroll down to the new "This Just In" area and you will find it there.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

According to Bauer and Samburov hams making contact with the Roy Neal Commemorative Operation will be eligible for a special certificate. More ham radio in space news later on in this weeks report. (ARISS)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W9EAR repeater of the EARS Repeater Network serving Indiana, Kentucky and Illinois.

(5 sec pause here)

**
AN ARNEWSLINE(tm) EDITORIAL: AN ANONYMOUS NOTES OR E-MAIL PLEASE

I'm Bill Pasternak, WA6ITF, with a short editorial comment. Actually, its more of a reminder that the Amateur Radio Newsline does not accept anonymous letters and e-mail as valid information or story leads.

Every so often, a letter or e-mail will arrive making all sorts of claims. It might deal will allegations that a ham radio test session is corrupt, or identifying someone as the purported jammer of a net or that a ham is doing business over a local repeater. This past week we received two such notes. One claimed that a repeater was discriminating against a group of individuals. The other claimed corruption in the management of a ham radio convention. Both had something in common -- they were unsigned. And here's our policy in dealing with unsigned correspondence. Ready?

(Sound of actual letters being torn up and toss in the trash basket.)

That's right, you just heard me rip it up and toss it in the garbage can. And the reason is simple. If the person sending the letter or the e-mail does not have the courage to sign it, then the chances are that he or she is attempting to use us and you in a personal vendetta. And friends, we are not going to let ourselves or you to be used in someone's private war. That's been our policy since our days as the Westlink Radio Network and it is still our policy today.

The bottom line. If you are going to send us information you must provide identification and be ready to take responsibility for your words and actions. I you are not willing to do so, please save us the time and effort of doing this -- and tossing it in the trash.

This has been an infrequent Amateur Radio Newsline editorial. In Los Angeles, I'm Bill Pasternak, WA6ITF. (ARNewsline(tm))

**

ENFORCEMENT: ALLEGED TOWER UNBOLTER CAUGHT

A follow-up to a story we aired two weeks ago about a man trying to unbolt power transmission towers in three western states. He has now been captured.

According to news reports, the suspect is identified as Michael Poulin. He claims that his actions illustrate how vulnerable the power grid might be to acts of terrorism. At airtime, charges against him are pending. (Published news reports)

**

ENFORCEMENT: IRLP HARASSMENT

A pair of mid-West hams are being asked to explain their actions their on the air activities. The FCC's Daryl Duckworth, NN0W, tells us who and why:

--

Duckworth: "Two Oklahoma amateurs; Johnny Adams, KD5QJG, of Dell City and Jack Stokes, KE5KR, of Oklahoma City have been queried regarding complaints of deliberate interference and harassment of repeater users on W5QO, 144.650 and 145.250 MHz."

--

The FCC says that at the time the incident occurred, the W5QO repeater was functioning as an IRLP node. Adams and Stokes were given 20 days from the day that they received the FCC's letter to answer the charges. They were also warned that failure to respond could result in the revocation of Amateur station license and suspension of operator privileges. (FCC, RAIN)

**

ENFORCEMENT: HEY YOU LEFT THE RADIO ON

The FCC also wants to know why a ham may have walked away from his car with his rig running as a cross band repeater. Again, the FCC's Daryl Duckworth, NN0V:

--

Duckworth: "A complaint of two hours of interference on September 16th, coming from an amateur transceiver unit, in a car, unidentified, unattended, and operating in crossband mode has prompted the Enforcement Bureau to inquire of the vehicle's owner, KG6QKR, Angel Carballo, of Freemont California. The vehicles was located at Hamilton and Bascon Avenue's in San Jose (California) at the time of the interference to 145.23 and 146.94 MHz."

--

Like Adams and Stokes, Carballo was also given 20 days from the date he received the FCC's letter to file a response. (FCC, RAIN)

**

RADIO LAW: A CLARIFICATION ON EQUIPMENT SEIZURES

Phil Kane, K2ASP, says in the CGC Communicator that the FCC does not confiscate equipment.

Kane, now an attorney in Oregon is the retired District Director of the FCC in San Francisco California. He says that he served many times as an on-scene supervisor during events such as the recent raid on an unlicensed broadcaster where equipment was taken. According to Kane,

seizures are made by the U.S. Marshal Service executing an order of the Federal District Court. Any items taken are held pending court action of forfeiture of the equipment to the Government.

According to Kane, the FCC agents on scene are there only as technical experts. They identify to the Marshals what equipment falls under the purview of the seizure warrant. (CGC)

**

RADIO RULES: THE FEDS ON FRS

Federal government entities have been authorized to purchase and operate radios certified by the FCC in the Family Radio Service. This, according to the May 2003 Manual of Regulations and Procedures for Federal Radio Frequency Management.

The manual says that pursuant to Part 95 Subpart B of the FCC Rules and Regulations, government users will be accorded the same privileges as non-federal users. Also, since FRS users must share each channel and no user is assured protection from interference caused by another authorized user, federal entities may not purchase and operate F-R-S radios for planned communications operations that safeguard human life or property.

The Manual of Regulations and Procedures for Federal Radio Frequency Management is a great publication that has a ton of useful information. The only drawback is that it costs $342.00 new. However it is available for viewing and download, chapter by chapter, at www.ntia.doc.gov/osmhome/redbook/redbook.html (CGC)

**

HAM EDUCATION: NEW ON-LINE HELP FOR INSTRUCTORS

The American Radio Relay League's Field and Educational Services branch has announced a new resource for active Volunteer Instructors. Titled the Online Instructor Primer, it's a new compilation by Linda Mullally, KB1HSV, that's jam-packed with helpful tips, links, and tutorials sure to help instructors eager to try new ideas and approaches. More information about it is at the ARRL website. Just take the link to www.arrl.org/FandES/ead/instructor/oip (ARRL)

**

NAMES IN THE NEWS: PATRIOT NAME CHANGE

Turning to this weeks names in the news. Word that the Patriot DX Association has changed its name to the New England DXCC with a new mission. That of fostering participation in DX'ing and the DXCC program.

The group has also announced the creation of a new operating event called the N-E-D-X-C-C Challenge. According to an October 27th press

release the purpose of the Challenge is to stimulate on-the-air operating activity among club members to make contact with many DXCC countries as possible during the prescribed activity periods. More information is on the web at www.nedxcc.org (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: SOUND OF A BLACK HOLE

From the science page this question. Did you know that the voice of a black hole is a deep, deep bass? In fact, its 57 octaves below middle C. It is and Jim Meachen, ZL2BHF, has more:

--

The Chandra X-ray Observatory has picked up sound waves for the first time from a cluster of galaxies 250 million light years away. Astronomers at the Institute of Astronomy in Cambridge, England, discovered the sound waves while analyzing the Chandra images of the Perseus cluster. This is an immense grouping of galaxies held in formation by the powerful tug of a super massive black hole.

Andy Fabian is a professor at the Institute of Astronomy. He says that a close study of the fine detail collected by Chandra shows ripples in the X-ray pattern that are caused by sound waves excited by the energy from the black hole.

Fabiam says that the sound produced by the black hole is a B flat, the same pitch as a key near middle C on the piano. But the song of the Presses Black Hole is 57 octaves below that middle C. This is a tone or frequency more than a million, billion times deeper than the limits of the human ear,. Fabian says that makes it the lowest note known in the universe.

For the Amateur Radio Newsline I'm Jim Meachen, ZL2BHF, in New Zealand.

--

Scientists expect more insight on this as the experiments progress. (Science Today)

**

EMERGING TECHNOLOGY: NEW FRACTILE ANTENNA DESIGN

Engineers at Pennsylvania State have developed innovative design methods for a new class of antennas. One composed of an array of fractal-shaped tiles that offer anywhere from a 4 to 1 to 8 to 1 improvement in bandwidth compared to their conventional counterparts.

According to Space Daily, the new broadband antennas are composed of irregular but self-similar, repeated fractal-shaped unit tiles called "fractiles." These "fractiles" cover an entire plane without any gaps or overlaps.

While fractal concepts have been used previously in antenna design, the Penn State research team are the first to introduce a design approach for broadband phased array antenna systems. One that combines aspects of tiling theory with fractal geometry. (ANS, Space Daily)

**

HAM RADIO IN SPACE: AMSAT UK DONATES TO LAUNCH FUNDS

AMSAT-UK is funding the development of two new amateur radio satellites by donating œ10,000 to each of two projects in the USA and Germany. In accordance with their constitution, at their meeting on Saturday October 25th, AMSAT UK decided to make an immediate donation of œ10,000 to the AMSAT North America's Project Echo Launch Campaign Fund.

Also at the meeting AMSAT U-K decided to earmark another œ10,000 for transfer to AMSAT Germany to support the Phase 3 Express project. This, when a suitable component for funding can be identified.

Project Echo satellite is due to be launched next March 31st. The Phase 3 E Express ham satellite is likely to get a ride to orbit in the 2005 to 2006 time frame. (ANS)

**

BEACON NEWS: UK PROP BEACONS BACK ON

If you are a microwave D-X'er, listen up. This one is for you. It comes from the United Kingdom and says that two of that nations highest frequency beacons are back in full time operation.

Both are part of the South Coast microwave beacon complex. GB3SCX operates on 10 GHz and GB3SCK on 24 Ghz. The two units are again operational following a major rebuild. Both have had their output power increased, raising them at least 10 dB above their previous levels. And there's more.

GB3SCK has been retuned to transmit on 24,048.905 MHz in order to comply with the new 24 GHz bandplan, which will come into force at the beginning of 2004. Also, the GB3SCC which is on 5760.905 MHz has had its keying duty cycle adjusted. It now transmits callsign and location details, followed by plain carrier for a total of 45 seconds. It then stops transmitting for 15 seconds to permit cooling before resuming its operation. Reception reports on any of these beacons go to John Fell, G0API, at his Callbook address. (GB2RS)

**

DX

In D-X, MW0USK reports over QRZ.com that M1DAZ, who is on active duty with the British Forces Broadcast Services in Iraq, has obtained official authority to operate with the callsign YI9DAZ. Darran will be active around the bands for the next couple of weeks using a Yaesu FT-100 and Atas aerial from the Southern part of the country. Most of his operation will be on P-S-K 31 so that he does not disturb his room mate who is the presenter of the early morning radio show. QSL direct to M1DAZ at his home address. (qrz.com)

F6BUM will be active on CW, SSB and RTTY from various regions of Peru. This, between the 5th of November and the 5th of December. He will be using the callsign OA, followed by a district number, stroke F6BUM. (GB2RS)

Also, three operators from Japan will be active from Kathmandu, Nepal, between the 16th and 22nd of November. The callsigns will be 9N7AU, 9N7LN and 9N7SZ. They will operate on 40 to 6 metres using two HF rigs and a 6-metre rig. (GB2RS)

And, a VHF DXpedition to La Palma in Square IL18, should be active through November 19th. This, with DJ6JJ and DL1EJA operating during the ARRL EME Contest and scatter during the Leonids meteor shower. Their station is reportedly using use high power to four 12-element Yagis with full elevation control. For all of these operations please QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: THE TECH SIDE OF THE NYC MARATHON

And finally this week a look at two other ham radio aspect of the New York City Marathon. The way hams organize and the technology that they use. Here's Henry Feinberg, K2SSQ:

--
Last week Communications Coordinator Steve Mendelsohn, W2ML, told us that it takes 411 radio amateurs to keep the New York City Marathon moving along. This week W2ML says that it also takes a lot of well organized ham radio networks to keep the messages flowing:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, ham radio communicators are aided by a lot of modern technology. Its science that literally gives them a leg up on the contestants:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

And this year ham radio expanded the use of its own kind of digital positioning technology:

--

Audio only. Hear the newscast in mp3 at www.arnewsline.org

--

According to Mendelsohn, it's human beings -- trained ham radio communicators that makes for a smooth race.

In New York, I'm Henry Feinberg, K2SSQ, for the Amateur Radio Newsline.

--

Next week, how it all gets put together. Please be with us. (ARNewsline)

**

NEWSCAST CLOSE

It doesn't matter whether these things are intended for the ham radio service or not. If they're at all capable of operating on the frequencies in and/or around the CB band, they're illegal to sell under existing FCC rules. Likewise, when it comes to the frequencies near the CB band (including the ham frequencies - the 10m band, for example), there are now even restrictions on how many amplifiers a licensed ham can sell, even to other licensed hams. The rules have changed over the last few years. It would be wise to keep up with those changes.

> And they didn't mention how much drive is
> needed to work these amps. It may be less
> than the usual 100W a ham transciever puts

Not relevant to this issue under the existing rules.

>
>You've been brainwashed!!!

Not necessarily. It all depends on the situation. Lots of factors to consider.

I do agree, though, that simple rules like "If your interest rate is less than 5%, the best loan to get is a 30 year" and "Paying off a house quick is foolish." are too simple to be useful unless a lot of other information is considered.

>> Instead of paying off that low interest loan quickly, one is smarter
>> paying
>> off the higher interest loans like automobiles, department and credit card
>> charges, and other loans/debts.

Sometimes - not always.
>
>Then there are the rocket scientists (NOT!!!!) who refinance their house,

>that they really couldn't afford in the first place. Now they're paying for
>30 years on a truck that will be 25-years in the scrap-yard before it's paid
>off. Brilliant financial wizards!!!

Yep - but that was obvious when they bought the SUV that they couldn't afford in the first place.

In reality, it does take a bit of financial wizardry to figure out what the best deal is *for you* at the time and in *your* situation. For example, if someone can reasonably expect for their income to grow faster than inflation, long term debt may make more sense than paying off quicker and depleting savings. Mortgage interest is tax-deductible while other interest is not, so there may be an advantage to consolidating debt.

But ya gotta work the numbers! And there's no wizardry that's gonna fix living beyond one's means.

Yes, I do ... because the FCC was bound by S25.5 of the ITU Radio
Regulations.
(The ONLY reason they gave for keeping the 5 wpm requirement at the time.)

NCI asked the FCC to eliminate code testing if they could see their way
clear,
but we frankly were not surprised by the outcome.

Actually, outlining some experience/qualifications to render a view lends
a certain degree of credibility to comments. It also helps to establish
one's
status as an "interested party" in the legal sense.

Hans, do you consider your occasional foray into profanity, referring to
Jim's anology as flaccid, or calling me stupid as something other than
emotional responses?

Of course, I'm stupid, so I might not know th edifference!! 8^)

I call it descriptive (certainly it's not emotional!!).

According to my Funk and Wagnalls (gotta love a guy with a funky name
like that!):

====> flaccid: adj. soft and limp: (example: flaccid biceps)

In other words, without strength, weak, ie., "flaccid analogy"

If that strikes an emotional chord with you, then you must truly be a
"sensitive" guy!

With all kind wishes,

Michael Powell's administration has made about as much sense as the decision on the 2000 Florida balloting.

I attended a presentation by Chairman Powell in January, where he was talking about band changes and the need to "share spectrum." I think there are some things he does not understand.

Plus - - I see the ARRL becoming less and less effective on issues like this.

Powell was brought to us by those who voted for either Bush or Ralph Nader. (A vote for Nader was effectively a vote for Bush - - a trick and a backfire that was not an effective way for voters to protest.)

2937. 14 Petitions

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-20 20:03:57 UTC
From: lenover21@aol.com
Message-ID: <20031120150357.28496.00002154@mb-m18.aol.com>
Source record: 82513

At the close of the ECFS on 19 November 2003, the number of
documents on public view are:

RM-10805: 231
RM-10806: 217
RM-10807: 176
RM-10808: 193
RM-10809: 181
RM-10810: 180
RM-10811: 991 Total: 2,169 (10811 has 45.7% of total)

RM-10781: 321
RM-10782: 271
RM-10783: 276
RM-10784: 254
RM-10785: 256
RM-10786: 424
RM-10787: 674 Total 2,476 (10787 has 27.2% of total)

Grand total: 4,645 documents for all 14 petitions.

RM-10811 records include two sets of 6 postcards each, the reverse
side pre-printed with "FISTS" and fill-in blanks for a short comment,
name and address. Those are the USPS type of postcards.

Comment period for 10805 through 10811 is officially closed, but some
may be late-filed. It should be noted that FCC 98-143 comment
documents are still on public record and the last comment filed was in
September, 2003; official close of 98-143 comment period was 15
January, 1999. That last filer is Peter Alterman, PhD, W2CDO.
[Way to go, higher education! :-)]

FCC 03-104, the Docket on Broadband over Power Lines has 5,105
documents on record as of close of ECFS on 19 November 2003.

I hope you are right.

However, do you have any concrete examples about this ?

At least the IARU seems to be quite cautious in their statements:

http://www.iaru-r1.org/overseas-licences.html

<CEPT 1/2>

>Once their licence no longer says class 1 or class 2, I assume they would
>get class 1 priviledges, even if the national rules of where they are
>going remain unchanged and there is still a Morse test there.

Based on my experience with the HAREC 12/5 WPM transition, I would be
quite sceptic about that, but if you have any observations, I would be
very interested to hear about them, so that I could inform hams
planning to go abroad.

Don't try and spin the incompetence of appointed officials and blame Bush. I understand your a braindead democrat and as such is unable to logically look at a situation, without a nodd from queen Hillary that is. So I will not dwell on that.

As for a 'official of the FCC'. They have been going downhill for over 20 years. None of them have a clue as to what the hell ham radio is, or is supposed to be. Seeing how they support BPL is proof enough of their incompetence. Maybe they should consider hiring a electronical enkineer to help them out. Or get some free advice from a CB freebander. Anything is better than what they have now....zero.

Dan/W4NTI

Perhaps a better term would be "appropriate"

>I would agree for the most part. Now..... can you cite specific rules that
>state what might be "old fashioned" in exact examples not just speaking of
>generalities??? :)

Specific rules? Not really, because the wording of the regulations is so vague.

But here's a general guideline:

Imagine that your transmissions are recorded and transcribed.

Would you be proud or embarrassed to have them replayedto, or read by, your
spouse/SO/person you'd like to have in that role? Children? Parents?
Employer/employees? Clergyperson? Neighbors? FCC? WRC committees? Enemies of
amateur radio?

Unless you can answer "proud" or at least "not embarrassed" in all cases,
there's something inappropriate going on. Because you never know who is

listening - or recording. Just my opinion.

>> I never hear that sort of stuff in CW ragchews, btw.
>
>Just had to get that CW jab in there eh? :) :)

No jab, just fact.

>> >Heck, we have organizations in the US already
>> >trying that..... not a small step to extend to ham radio!
>>
>> You mean like folks who say the press is "liberally biased" or "beholden
>> to big business" when it reports things they don't like?

>No, actually, the opposite.

Those two *are* opposites! Some "conservatives" say the media has a liberal
bias, while some "liberals" say it is beholden to big business too much.

>The right-wingers who want to control others
>thoughts, what they read, what they believe in, what people should do to
>their bodies and put in their bodies, and make it damn near a profession of
>forcing this on others.

There are left wingers who do exactly the same things, too. Me, I try to stay
"middle of the bird" (Pat Paulsen said it first, though).

The terms "liberal" and "conservative" have been corrupted to the point that
they are almost useless today. Perhaps a better way to look at things in that
area is whether someone wants to restrict what an individual or small group can
do, vs. restricting what a large group/institution can do. Or has to do.

>Hmmm.... Rush Limbaugh, our nation's largest
>hypocrite, is a prime example. (do as I say, not do as I do mentality)

You mean about drug abuse?

>Hmmm.... Pat Buchanan was a Republicrat, and also, if Hitler was alive and
>well today, and living in the US, he most likely would have been a
>Republican/Republicrat.

You're awful close to Godwin's Law there, Ryan!

Actually Hitler was neither "liberal" nor "conservative" in the American sense.
He was a fascist, wanting the state to have absolute power in all areas, with
no checks or balances, nor individual rights, nor institutional rights. Only
government power, and concentrated in a single leader.

>> >Like I said.... look beyond the cuss words, and there is a ton of things
>> >that some radical freaks could oppose.
>> >
>> Sure. But limiting what can be said on the amateur bands is not an
>> incursion
>> into free speech, because the amateur bands are public property.

>
>Actually, if one is truly a person that believes in the most of limiting
>government intrusions of our lives etc., then that person should actually be
>against all licensing of radio waves.

Not at all!

>Really, when you get to the point of
>it, NO ONE actually OWNS the airwaves.

Just the opposite - Everyone owns them. They're public property. And as such, government has the role of regulating and divvying up the spectrum so that the owners (that's all of us) get the maximum benefit from a limited, shared resource.

That's fundamental radio law, (insert standard I'm-not-a-lawyer disclaimer here). The rest is details.

>But in reality, there is a need for
>some type of regulation otherwise the chaos that would be there if it wasn't
>would be tremendous.

And the result would be that the resource would not be used for the public benefit.

>I personally believe, if the acronym is correct, the
>ECPA should be deemed illegal. (refernce the ban on cell phone recption.)
>
Which ban? You mean the one where it's illegal to listen in, or the one where private property owners can require that cell phones be turned off?

If the law doesn;t make it illegal it's legal.

Is your receiver one-channel crystal-controlled with no off-switch?

The same is true in any professional field. It's called "credibility".

And, as I know full well, sometimes it is legally required to
disclose one's background and present status to avoid claims of
"conflict of interest" based on present or past associations with
the matter or the agency.

KG4LEG was given a letter from ron, N9EE stated that coy roy has been kicked off the repeater. coy roy has been on a little less now in day 8 or 9 since his first sighting on 146.640. KF4GAH was talking about roys situation more today, he added that coy roys wife actually sits with coy roy and coaches him on how to piss people off.

we could also take this as a time to promote the 146.640 repeater.

the 146.640 group has a website,
www.the64machine.org
640 has echolink too
the group meets the first saturday of each month at the NPR N.P.R new port richey HOOTERS on the water.
repeater is up 1175 feet on the channel 10 tv broadcasat tower in holiday floida in the holiday lake estates subdivision.
other repeaters on the tower are 147.150, 444.425, and various commercial.
the tower site is maintained by WB8ONY wb8ony@arrl.net
www.qrz.com shows his information to be

WB8ONY Lookups: 194
Michael W Whitmore
1820 Solar Dr
Holiday FL 34691
USA

i once asked him if he could donate some space on the tower for a very small repeater, he said there was no room, and the tower is WAY OVERCROWDED as it is. several months later ron N9EE got a new GMRS repeater up on that tower, i think it is 462.650 not 100% sure. HMMMMMMM, can you say POLITICS? ron has political ham radio muscle, me? not.

other people who frequent the 146.640 repeater

And YOU can help! Get out there and listen on the road.
Get the tag # of the tractor (not of the trailer), date, time,
highway, milepost or exit number. Send this info to rholling@fcc.gov .
Make a difference: this is how those
other truckers got warned--individual hams who quietly
listened and accurately reported the above data. RH will
then respond IF, again, the info is accurate. Each ham
can make a difference and stop that "tan-fer thar, drivah,
ah know you rah't, fer-tan thar SQUEAK!!" If we don't, we will eventually
hear them beeping and squeaking their
way along on 17 Meters.

The way to "trap" a driver is to quietly cruise along. Do NOT talk to them
or get into an argument! Simply overtake a trucker who *may* be operating
on 28.085 AM. As you pass, or he passes you, he may be curious
about "them 'funny antenners' thar" and comment to you
about it (or other truckers). It is then you copy down the
tag # on the FRONT of the tractor, the DOT # (this confirms the identity of
the truck), the direction of travel and milepost (or exit), date and time.
Also the company name. Send it in! Done correctly, the "man" will send out
a warning notice to the company holding THEM responsible for their drivers'
actions. It is legal and enforc-able.

You misunderstood me, Carl. Sorry if I wasn't clear.

Note that I wrote "still have code testing in the USA today" (emphasis on
"today")

IIRC, NCI asked for 5 wpm right away and a sunset clause that would dump
Element 1 if/when S25.5 removed the treaty requirement. FCC did the 5 wpm thing
but did not enact the sunset provision.

My point was that I think if there had been overwhelming support of both parts
of the NCI proposal, FCC would have done the sunset clause thing and code
testing would have disappeeared in the USA more than five months ago. YMMV.
>
>NCI asked the FCC to eliminate code testing if they could see their way
>clear,
>but we frankly were not surprised by the outcome.

Was there not a request for a sunset clause that would do it automatically?

You'll recall that I asked if you thought Franklin Roosevelt called
himself "President Roosevelt". That didn't indicate confusion on my
part. It pointed out an inconsistency in your post. Now you've spent
days attempting to defend your error.

2960. Is Michael Jackson Innocent?

Newsgroup: rec.radio.amateur.policy
Date: 2003-11-21 07:11:35 UTC
From: Dwight Stewart <stewartx@NOearthlinkSPAM.net>
Message-ID: <HUivb.11516$Rk5.6844@newsread1.news.atl.earthlink.net>
Source record: 82536

Is there anyone out there who actually believes Michael Jackson is really innocent of this latest charge? There is a long list of questionable behavior that suggests otherwise - his "relationship" with 14 year old Brook Shields (including at least one date to a Hollywood awards ceremony), rumors of sleeping in bed with children, music videos targeting children with images of him grabbing his crotch, a multi-million dollar payoff of a family with similar accusations, admissions of sleeping in bed with children, an interview showing a 13 year old boy leaning against him like some kind of lover, and now these accusations.

Michael Jackson has all the classic symptoms of the typical pedophile. Pedophiles often attempt to attract children to their homes using candy, toys, or play equipment. Michael Jackson did this large with Neverland. Pedophiles often dress up as clowns or similar characters. Michael Jackson has had cosmetic surgery to change his (now clown-like) appearance. Pedophiles often describe their actions as innocent and loving, and insist others just don't understand the questionable behavior. Michael Jackson has said all of these. Pedophiles often hide their behavior behind claims of just trying to "help" children. Michael Jackson has done the same. All this, with the behavior described in the first paragraph, points strongly towards pedophilia.

Given all this, perhaps the real question is whether Michael Jackson will ever be convicted? This is already shaping up to be another O.J. Simpson-like court case with accusations of racism towards the police, fingers pointed at the victim and victim's family, and claims (by his brother) of "a modern day lynching." Does anyone want to make a prediction at this point?

You've spent days dumb-assing your way through this and now you say
you didn't know if FDR referred to himself as "President Roosevelt."

Don't give up your retirement. You'd never make it in the real world.

That's right. Also proof of age.

> I need not take any written or skills test, nor pay any
>examination fee, nor demonstrate any particular knowledge of the issues.
>(In fact such impediments to registering/voting used to exist in some
>jurisdictions, notably in the south, and are deemed unconstitutional.)

That's right - because voting is a right, not a privilege.

However, no matter how interested someone is in politics, that person can *only* vote where he/she resides. IOW the price of voting is having to join a community by living there.

For years I worked in Philadelphia and paid Philadelphia wage tax (over 4% of gross pay). But I lived in Delaware County and could not vote in Philadelphia elections. (I met Mayor John Street once, years ago, but that's another story).

Or consider the recent election of a movie actor with no experience as a government official to the governorship of California. (Thinly veiled way around term limits for Pete Wilson, of course.) Why couldn't I vote in that election? How about when Minnesota governor Jesse Ventura was elected?

So there's definitely a precedent of "if you want to vote, join us first"

>It
>speaks volumes that you'd suggest such impediments to comment on something
>as mundane as regulations regarding a hobby radio service.

It speaks volumes that you have lost track of the discussion. WA2SI's idea, which is what we are discussing, is to have a one-time poll/survey about a single issue (code testing). Not about commenting or petitions or proposals at all.

I have never said that anyone should be restricted from commenting or petitioning.
>
>Second off, regardless of the applicability of your analogy, I do not judge

Good for you!
>
>The fact that you have an amateur license suggests that you will have an
>opinion about amateur radio regulation, but it gives no credence in and of
>itself whether your opinion is or is not worthy of consideration.

Yes, it does.

In general, what happens to the amateur radio service has a greater effect on licensed amateurs and those who want to be licensed amateurs than on the general public.

>Similarly
>a non-licensed individual may have an opinion but lack of a license
>similarly gives no credence in and of itself whether that opinion is or is
>not worthy of consideration.

One word: motivation.

>Thus your "almost anyone who is really interested in being included in such
>a poll can get a license" strikes me as just another version of the
>discredited practice of 'poll taxes' by which privileged persons attempted
>to limit the influence of 'lesser' (in their pecking order) persons in
>political affairs.

Nope. It's exactly analagous to the rule of "if you want to vote in this community, you have to join it".

Who are the people who would want to participate in a one-time survey on Morse code testing but who cannot even pass the Technician written test?

Do you really think the 35 question Tech test is a 'barrier' to anyone that wants to be a ham?
>
>I don't see how your mileage can vary.

>
Yet it does.

And we're talking about a survey on a single subject, not comments to FCC.

Good luck on this one, now.

I heartily disagree. While ARO's may not be the only "interested"
parties, they are the party that currently defines the hobby/service
from a cultural standpoint. Thus, licensed ARO's are the constituenct
that must lean on those who define the hobby/service from a regulatory
standpoint, the FCC.

Wow, is a 35 multiple-choice question written, for which the Q&A pool
is published, really too much to ask for the <Carefully chosen words
follow, don't miss 'em.> *right* to vote concerning the *requirements*
to *earn* *privileges?!*

Perhaps the path is clearer than we thought.

thing
> but did not enact the sunset provision.

Actually, we asked them to be rid of code testing then, or, in the
alternative if
they could not find a legitimate "out" on S25.5, to drop the code test to
the
minimum they thought necessary to meet that obligation and enact a sunset
clause.

> My point was that I think if there had been overwhelming support of both
parts
> of the NCI proposal, FCC would have done the sunset clause thing and code
> testing would have disappeeared in the USA more than five months ago.
YMMV.

> >
> Was there not a request for a sunset clause that would do it
automatically?

Yes, but we weren't surprised that they did not adopt it ... the agency
typically
doesn't like to prejudge the future ...
however, the old addage "Don't ask, don't get." has some truth to it ... so
we asked anyway.

There will always be some for whom any amount of testing is too much.
Right now, we're sort of catering to that group.

After all almost everyone uses a two-way radio now, and we don't have to
be very smart to use a cell phone, (proven every day) do we? So why are
all those stuck-up Hams making like they are so hot and smart? 8^)

I predict he will be convicted, since this is the second time he's been involved officially in this sort of thing. We'll have to see how the evidence plays out, but right now it doesn't look too good for him.

As for sentencing, that is a different thing. I think loonyland has a minimum 3 year sentence per incident, but envisioning him in a state prison is hard to do. Perhaps if it happens, they will try to get him sent to Juvy?

When asking the question in the subject line, I was thinking more alone the lines of personal opinion than legal guilt or innocence. We're obviously not a court. The last paragraph had to do with predictions about any potential court ruling.

> "Celebrity Justice" will break into prime-time
> and Court-TV will buy CBS.

Interesting prediction. :-)

I don't know, Mike. Up until the very last few days of the trial, I was fully convinced O.J. would be found guilty.

> As for sentencing, that is a different thing. I think
> loonyland has a minimum 3 year sentence per
> incident, but envisioning him in a state prison is

Okay, I'll give my own prediction. Will he be found guilty? Probably not. If found guilty, how much time will he spend? I agree three years is pushing it (which is why I doubt he'll be found guilty). But, since three years is the minimum, he'll have to serve that. But I seriously doubt it will be much more than that.

> Perhaps if it happens, they will try to get him
> sent to Juvy?

Someone asked last night on CNN (I think) if he will be tried as an adult of minor.

I'm a ham radio operator and I asked it. I also asked other ham operators. There's room in this newsgroup for less formal discussions between ham operators too. The subject line is clear, so you should be able to easily skip the discussion if you're not interested.

join a
> community by living there.

Your analogy remains flaccid. Amateur radio exists in the community in
which we all live. It has an effect on all of us, whether we are licensed
or not, and the regulations concerning qualification to participate in it
even more so.

My friend, W4OYI, ex-President of ARRL, compares the ARS to a public park; a
place in the spectrum set aside for citizens to pursue the avocation of
radio. What you are proposing is that persons already in this 'park' by
virtue of having paid some entry price be the only ones allowed to vote on
the conditions under which other citizens can fully participate in every
area of park activities. IOW, "I got mine, now you get yours, and then you
can vote."

> Or consider the recent election of a movie actor with no experience as a
> government official to the governorship of California.

Are you suggesting that "experience as a government official" should be a
qualification for election to office in the USA? The Constitution contains
no such language. My daughter was recently elected to public office, and
she has no previous experience as a government official. Should she and
Arnold be denied their office? Should only existing or previous government
officials be allowed to be elected?

Or should there be some sort of 'incentive licensing' of government
officials in which you must first be elected to an entry level office, let's
say Canine Capture Technician. Then after gaining the skill and experience
to capture 5 dogs per minute, they be allowed to run for office at some more
responsible level, all the way up to President, and only those already
elected would be allowed to vote for them? What a concept!

No, doesn't (K0HB)

...we could go on and on....

> In general, what happens to the amateur radio service has a greater effect
on
> licensed amateurs and those who want to be licensed amateurs than on the
> general public.

But we weren't talking about "in general". Wahtoosey was proposing a poll to vote on the code test as a qualfication for entry (to HF). Since you "already have yours", such a poll (were it binding on FCC) would not effect your entry into amateur radio, but would have a far greater effect on those not yet licensed (the general public). Thus we could much more convincingly argue that you should *not* be eligible to vote in the poll, but the general (non-licensed) public *should* be eligible.

> One word: motivation.

Ah, yes, the old "motivation" card. We dealt with that back in 1996 at

http://groups.google.com/groups?selm=836389087.AA06738%40hamlink.mn.org&oe=U
TF-8&output=gplain

> Who are the people who would want to participate in a one-time survey on
Morse
> code testing but who cannot even pass the Technician written test?

Wahtoosey didn't suggest a 'survey'. He talks about a poll where people vote and democracy rules.

And the discussion was not about those who 'cannot even pass'. It was about those who (for whatever reason of their own) have not become licensees. More of your "I've got mine, now you get yours" mindset showing.

With all kind wishes,

In theory, the way the web site is written, these amps might work on say
80 meters.
And not be usable between 24 and 35MHz. Maybe have an easily removable trap
centered around 27MHz to make it legal to sell. Sure. The web site
doesn't say what
frequencies these amps will work on. But I think everyone can guess
what these
amps will really do.

Hmm, sounds like a motivational issue. If you want HF, the road to the General and Extra begins with the Technician exam...no matter what. If they're truly "interested" in participating in participating in the process of this change, you'd think the Tech exam would be...wait a sec, lemme stop. I just remembered whom we're talking about. Kinda sad. :-(

No, Alun. I really DO believe that Amateur Radio operators should define Amateur Radio. What a concept, eh?

Ayup!

If he's convicted, the kid's parents should be nailed with something too. Anyone who allows a pubescent child that a 40 something guy wants to pick up, take to his amusement park home and hop into bed with the kid (all those things are widely known) should be held responsible.

That's a passable analogy.

In most of the public parks I know, what you can do is limited. And
you need a permit/license to do certain things in the park.

> What you are proposing is that persons already in this 'park' by
> virtue of having paid some entry price be the only ones allowed to vote on
> the conditions under which other citizens can fully participate in every
> area of park activities. IOW, "I got mine, now you get yours, and then you
> can vote."

No, that's not it at all. You misunderstand what Bert and I are
saying.

What we're saying is that on the single issue of continued Morse code
testing, it would be interesting to know what the opinions of *all*
licensed US hams, (not just a vocal minority) really are. That
includes amateurs of *all* license classes, not just those who have
passed a code test.

To use your park analogy, it's like polling those who actually use a
park whether a specific change should be made.

Nowhere is it proposed that the ability of others to comment would be
changed.

Of course this is simply a discussion point because there's no one who
would actually pay the expenses to conduct such a poll.
>
> > Or consider the recent election of a movie actor with no experience as a

Nope.

I'm saying that I find it incredible that the allegedly most qualified
candidate for the highest office in the most populous and most in debt
state in
the Union is a movie actor with no real experience as a government
official.

> The Constitution contains
> no such language.

I know. And nowhere do I say it should be a requirement. But do you
really think the new governor is going to better than the old one?

> My daughter was recently elected to public office, and
> she has no previous experience as a government official.

Did she start out as Governor or as something with a little less
responsibility?

> Should she and
> Arnold be denied their office?

Nope. The electorate will get what they asked for.

> Should only existing or previous government
> officials be allowed to be elected?

Not at all.

Do you really think the new governor of California is the most
qualified for the job? I don't.

But because I don't live there, I can't vote there.
>

Who said it would be binding on the FCC?

And remember the other conditions of the poll: *Any* ham would have
the same vote.

> Thus we could much more convincingly
> argue that you should *not* be eligible to vote in the poll, but the general
> (non-licensed) public *should* be eligible.

By that same logic, you should not be allowed to propose your
two-class learner permit system, because you've already "got yours".
And you "got yours" under far less draconian rules than you propose

for others.

> vote and democracy rules.

Is that bad? Are you against direct democracy and polling of those
most affected?
>
> And the discussion was not about those who 'cannot even pass'. It was about
> those who (for whatever reason of their own) have not become licensees.

You're avoiding the central issue. I think you know that if such a
poll were actually taken, you might not like the results.

> More of your "I've got mine, now you get yours" mindset showing.

Not me. I EARNED mine. I encourage others to EARN theirs. Is that bad?
Shall I apologize for my accomplishments and sit idly by while others
try to trash a community I belong to?

Not gonna happen, Hans. No matter how much you try to twist what I
wrote.

Poor obcessed Georgie-girl Busch WA3MOJ. He simply cannot have a civil
conversation. Ever. He has to push his perverted gay agenda all the
time.

Amplifiers are not illegal. Certain uses of certain equipment may be
considered illegal.

Georgie-girl's use of a computer in a public newsgroup should be
considered illegal!

Heard a guy on 2 meters say there is going to be a large get together of community low power FM broadcast enthusiasts this weekend at the North Hills Mall & Plaza in Raleigh NC. Equipment will be for sale which will allow one to set up an unlicensed FM community radio station. According to the guy, they are expecting a large crowd. I might drive down there just to see what this stuff is all about. Seems like these stations are sprouting up all over the U.S.

> Shall I apologize for my accomplishments and sit idly by while others
> try to trash a community I belong to?
>

Well, I knew it would all eventually get down to that simple statement.

(To focus "on topic", the question was if there should
be a vote on whether or not the FCC should retain
Morse code as a test for HF licensing.)

N2EY asserts he has EARNED his HF access, presumably because he passed a
Morse test, and he encourages others to EARN it by the same means. I
support his right to have that opinion, and he need not apologize for it.

What I do not support is his assertion that 'others' (IOW, those who do not
share his opinion on Morse testing) are trying to 'trash' amateur radio.

73, de Hans, K0HB

PS: N2EY pleads ignorance about the 1966 statement on this topic since he
was "not online", so I will take the liberty to repeat it here.

Hang around here long enough, and you will see someone write
something like:

" A really tough written test would surely separate those who
really have an interest in the hobby.", or..

" Other, more relevant, methods can establish an applicant's
dedication to the service.", or..

" ..... the key to maintaining the quality of hamming
is making it something to work for."

All of the above quotations, gathered from a recent thread,
were made by serious and well-intentioned licensees who want the
best for the Amateur Radio Service.

All of the above quotations also completely miss the mark, in
that they suggest that the examination process is the key to
ensuring that "the right kind of people" (those who are "worthy")
become licensed and, by extension, that "the wrong kind of people"
get filtered out.

First, the testing procedure is an "entrance" exam, not a
"graduation" exam.

Second, while "interest", "dedication", and "hard work" are
certainly hallmarks of good amateurs, the FCC and ITU regulations
do not specify levels of interest, dedication, hard work or other
measures of "worthiness" as requisites for a license. Therefor it
is not the function of the examination process to determine (even
if it could) if an applicant is "worthy" but rather to determine if
he/she is QUALIFIED to use the spectrum assigned. There should
be no "dumbing down", but neither can there be a requirement
that the examination process screens out lack of commitment.

Don't get me wrong here folks. I believe that the examination
process ought to be rigorous enough to determine proper knowledge
and skills so that a new licensee does not inadvertently trash the
bands, hurt themselves, or harm other users/uses of the spectrum,
but I have no expectation that the examination can filter out
"unworthy" applicants.

Even if it could, who then would become the arbiter of
"worthy"?

Your logic is quite unique. You screw up and that is, in some way,
supposed to reflect badly on me for noticing. Fact is, you didn't post
what old Franklin is to have said.

> Don't give up your retirement.

Did you have an idea that I had such a desire? If I was working and noticed your error, would things somehow be different?

> You'd never make it in the real world.

I did make it and in several fields. What has that to do with your error? Are you still finding it difficult to admit it?

I can't agree, Hans. My cousin lives down the road a few miles and runs
the local pharmacy. Ham radio has no effect on his life at all. He has
several employees. They too are completely uneffected by amateur radio.
None of them know anything about amateur radio or care a whit about
amateur radio.

Not to mention, a drastic oversimplification of the whole subject.
Comparison of a technical avocation such as the ARS to something like
buying a pavilion permit so you can have a picnic in one, falls apart
pretty quickly.

He has more experience wit' the ladies!

Am I the only one that sees the amazing hypocrisy in that little gem?

<a whole bunch of snippage>

> You're avoiding the central issue. I think you know that if such a
> poll were actually taken, you might not like the results.

Bingo! This issue seems to run along "party lines". I'm just about certain that the more non-amateurs included in any poll, the lower the support for Morse code, and vice versa.

Let's have NASCAR fans determine ARS policy. And we can determine NASCAR's rules. 8^)
>
>>More of your "I've got mine, now you get yours" mindset showing.

Perhaps "I've got mine, here is yours, have fun!" would be more appropriate?

Well, I guess that's a religeous issue, so I won't be able to convince you otherwise.

If you look me up you'll see I'm an Extra, and you'll be able to figure out that I passed 20 wpm. What you won't see, is that I've been a ham since 1980, not 1992, as I'm not originally from this country.

However, ham radio is not a job or a vocation, just a hobby. I welcome the unmotivated as much as I would welcome anyone else. Why shouldn't they have fun too? If someone wants HF and doesn't want to learn code, why should they bother to study for a VHF and above licence, when they could be scuba diving or building model railroads or what have you? (Not hobbies of mine, personally, but whatever turns you on). I know this is sacrilege to true beleivers, but so what?

The notion that only hams should decide the future of ham radio is just that, a notion. I can absolutely guarantee that it is not a point of view shared by the FCC, and it makes little sense to me either. At the very least all prospective hams have a vested interest, irregardless of the reasons they don't have a licence, reasonable or otherwise. I'm sure the FCC would cast their net a lot wider than that.

The Commission is forced by law to accept his input. Nothing forces the
FCC to act on it.

Dwight:

I think M. J.'s brother Jermaine has pretty much set the tone for what will happen during the trial through his use of the term "modern day lynching." In spite of Michael's obvious attempt to look like a "white" (caucasian) person, the race card will be played, and M. J.'s "blackness" will once again emerge, inspite of the fact that his face looks like it was painted with Sherman Williams Flat Latex (White). This whole thing will be turned into a referendum on whether or not a "black" celebrity can actually be held accountable for even the most heinous crime, and, in order to keep the streets of USA from burning, once more some judge will be given the same mission of Judge Lance Ito -- to make damn sure that this black celebrity gets away with murder -- or in this case, child molestation. I have no doubt that Johnny Cochran has already been placed on alert to mobilize a "dream team" for Jackson's defense.

Michael Jackson will not be convicted. The race card will be played to the maximum extent possible, and the black public will be placed on standby to over-react to any possible negative outcome for Jackson. Therefore, to save life and property, the O. J. Simpson debacle will have to be repeated. This may not be justice, but it will be necessary in order to ensure that many innocent people aren't killed in the riotous aftermath of his possible conviction.

Even that would not make the amps legal. Under the existing rules, even equipment that can be modified to operate in or around the CB band is illegal to sell. The devices must be built with those frequencies firmly locked out, with no way to restore those frequencies without major modifications to the device. This is the same mentality as used for scanners and cellular frequencies - the scanner must be designed at the core level (software, hardware, or both) not to accept those frequencies (a simple jumper or resister lock out is not enough because it can be easily modified).

Of course, a rule is only as good as the enforcement. In the case of CB devices, the FCC has been rather lackluster in their efforts to enforce those rules. Because of that, only the major manufacturers (Cobra, Uniden, etc) have complied. Easily modified equipment from lesser manufacturers, and so-called imported equipment, is widely available through CB radio catalogs and retail stores (and home-built amps are available in just about every town).

I've thought about that too. But, how would we hold them responsible - stupidity isn't a crime in this country? Letting a child sleep with an adult is certainly stupid, but we'd have to prove more than that to actually hold the parents responsible. And I can't think of anything specific in the laws we can apply to the parents in this case. Child endangerment is the only thing that comes close, but I don't even think that would fly. To convict, you'd have to show the parents should have known there was a clear and present danger. Since JUST sleeping with an adult is not illegal, that may be a tough case to prove. Anyway, since you said "something" in the first paragraph (not anything specific), perhaps you're having the same problem I'm having.

And I also hope we don't see riots and other violence after a conviction. But, with the news coverage this case is going to get, that is certainly a possibility. However, because of the timing, I don't think it will happen. This court case will probably not start until sometime next summer and many will be watching the activities surrounding the coming elections instead.

By the way, on the issue of riots and innocent people being killed, my brother was killed (in FL) less than a week after the LA riots (Rodney King), by two black guys who reportedly watched the riots enthusiastically on television and later told two family members, supposedly in a joking manner, that they were going to kill a white guy. About fourty-five minutes later, my brother died with two bullets in his brain, fired from a gun held less then six inches from his head. The other employees in the office (three young black men) were not injured, but did identify the attackers. The two men pled guilty to a lesser charge. Because some money (less than $20), and a small amount of drugs (suspected), was taken, this crime was reported as a robbery (possibly drug related), not a race crime. Clearly, I don't want to see a repeat of that (for anybody).

If what you're demanding to "earn" that license is unnecessary and based on a false premise, then I think it is bad. You haven't established, at least not to my satisfaction (nor the satisfaction of the ITU, FCC, and several countries around the world), why Morse code is necessary (notice I said necessary, not enjoyable) for ham radio today. And there is no truth whatsoever to the premise that those without code skills in the ham radio community are trashing anything. Instead, the vast majority are dedicated, well-behaved, enthusiastic, participants of this community.

Several countries around the world have moved, or are moving, forward to eliminate the Morse Code testing requirement while the United States sits back and watches. Is this the actions of a modern, progressive, country with feet planted firmly on today and eyes on the future? It's time to move on, Jim. Morse code is going to be even less necessary in the future. As such, Morse Code testing has no ligitimate place in that future.

I think you and Jim are both (perhaps intentionally) missing the point. This issue is not limited to just the ham radio community. The frequencies we use don't belong just to us - they belong to the entire country (all Americans). As such, the FCC has to take all Americans into account when making the rules and regulations to govern the use of those frequencies, and the license requirements for those frequencies. Therefore, Hans is right - if you're going to instead propose some type of poll to help establish what those license requirements might be, it should include all Americans.

As for myself, if you're going to ask Amateur Radio Operators if code testing is necessary today to meet the goals and purposes of the Amateur Radio Service (as defined in Part 97) and serves some valid need as far as the American public is concerned, then I would love to see the results of that poll - it would be very interesting to see how many (or how few) operators would actually place the goals and purposes of the Amateur Radio Service, and the needs of the American public, above their own desire to keep a code testing requirement.

And where does the rest of the American people fall into that, Bert? The frequencies we use belong to all Americans, not just us. Do you plan to take them into account when defining Amateur Radio, like the FCC must do when regulating this radio service (including it's license requirements)?

Been to any road side flea markets lately? Flea markets are literal bonanzas of modified CB equipment, linear amps, modified ham gear for use in ham bands or any frequecy for that matter. I have seen ham & commercial uhf-vhf gear modified for use on any frrequency being sold at fleas markets. For that matter, I have even seen complete FM stations being sold and touted as "start your very own FM broadcasting station, no license required." The supply of illegal and modified equipment is beyond comprehension and hams running around acting as self-appointed enforcement officers are not only fooling themselves but are treading on dangerous ground, considering the unsavory types of people who often buy and operate this type of gear.

I don't know what to say, Dwight. You have my sympathy, FWIW.

Wacko Jacko used to be black, but he isn't anymore. He blames it on a skin disease, but nobody beleives him. If I were black, I would just be thankful that the alleged molester was a white guy! If ever there were someone who deserved to be disowned, it is he.

Yep, those are reverse mortgages, and they're a useful tool. Essentially they
let a person get the equity out of a paid-off house without selling it.

But there are certain things to check very carefully. For example, what
interest rate is used and what are the tax ramifications? What happens if,
heaven forbid, you dad signs the papers and passes away a few days/weeks/months
later? Or, what about just the opposite, if he outlives the mortgage? (I know a
93-year-old still active and living alone in his own, paid-off house).

There's also the issue of what happens if he has to go into a nursing home-type
situation somewhere down the road.

>Not necessarily.... do the math.

OK, let's do the math.

Suppose someone goes out and buys a new car and finances $10,000 of its price at, say, 8% for 4 years. Their monthly payment will be $244.13 (thank you, Quicken98) and the total cost of that $10,000 will be $11,718.24. $1718.24 of interest.

Now suppose instead they tacked $10,000 onto a home refinance and bought the car for cash. Suppose they can get 5% for 30 years. Their monthly payment increases by only $53.68 - but it does so for three decades! Total cost of that $10,000 is $19324.80 - that's $9324.80 of interest, even though the rate is much lower.

Of course the situation is muddied by the fact that you pay over a much longer period of time, but it's doubtful that the car will last 30 years. It's further muddied by tax considerations, and whether/when the borrowers can expect increases in their income.

Most of all, there's the philosophical question of incurring long-term debt for a short-term purchase.

>
>> > Instead of paying off that low interest loan quickly, one is smarter

In general, I agree - you want to pay off the worst deals first. But a better scheme is to not go into that sort of debt in the first place.

Sure. A half-acre is a huge lot in many areas. Taxes are all over the place.
Energy and commuting costs are all over the map, too. What really matters is
"total cost to live". And what the jobs pay in that area.

>have fun too?

OK, fine.

What do you think of this idea, Alun:

Require all new hams to pass the Extra written in 10 years or less or they get
tossed off the amateur bands.

Is that a good idea or a bad idea?

>If someone wants HF and doesn't want to learn code, why
>should they bother to study for a VHF and above licence, when they could
>be scuba diving or building model railroads or what have you? (Not hobbies
>of mine, personally, but whatever turns you on). I know this is sacrilege
>to true beleivers, but so what?

OK, fine.

If someone wants to operate radios rather than build them, why must they learn
a lot of theory stuff that they are not interested in? To suit someone else's
idea of what amateur radio should be?

Why is a Technician Plus class licensee qualified to do anything allowed by the
rules on 2 meters, but not on 20 meters? What special knowledge is imparted by
the General and Extra class written tests?

>
Actually the FCC won't cast their net at all. They don't do polls or surveys -
just comments, petitions and proposals.

How many comments did the last restructuring get - 2500? Almost all of them were from already-licensed hams. Less than 1/2 of 1%, too.

I wasn't just talking about the end of code testing "trashing ham radio". There are a lot of other bad ideas out there.
>
> Several countries around the world have moved, or are moving, forward to
>eliminate the Morse Code testing requirement while the United States sits
>back and watches.

What's the count now?

How many countries have eliminated the code test, vs. how many have retained it so far?

>Is this the actions of a modern, progressive, country with
>feet planted firmly on today and eyes on the future?

What does all that mean, exactly? Besides the removal of the last remaining vestige of code testing?

> It's time to move on, Jim.

To what?

Let's say that tomorrow FCC just dumps Element 1. One sentence: "Element 1 is waived for all applicants, pending revision of the rules". Could happen, y'know.

What happens next?

>Morse code is going to be even less necessary in the future. As such,
>Morse Code testing has no ligitimate place in that future.

My mileage varies on that...

>Service, and the needs of the American public, above their own desire to
>keep a code testing requirement.

So you assume that the goals and purposes of the ARS are incompatible with any code testing at all?

And let's consider a basic principle of Hans' "learner's permit" proposal: forced upgrading.

If FCC adopted his proposal, all new hams would have to either get Extras within 10 years or leave ham radio. He's said that if 80% of newcomers drop out under such a system, that's OK with him.

IOW, a 5 wpm code test is an unreasonable burden, but having to pass the Extra written within isn't.

The tests aren't designed to 'impart' knowledge. They are designed to
determine if an applicant meets some predetermined minimum qualifications
for the level of license being sought. (I'd have thought you knew that.)

> What do you think of this idea, Alun:

> Require all new hams to pass the Extra written in 10

No you are misinterpreting my point of view. There was no data for them to base a choice on so no choice was truly possible and there was no possibility for them to control their fate. The WTC terror allowed no more choice than a lightning bolt does.

However people who chose to stay on welfare instead of move when the local economy in their area crashed, have chosen to fail. They have data. The local business closed. They can evaluate or guess whether it will ever reopen. They can choose to follow the jobs or they can choose to stay there and be poor. There are still people in Portsmouth, Ohio waiting for the steel mills to reopen. These mills closed decades ago yet people are still waiting.

Yes they are refracted like light through a prism rather than bouncing like
light off a mirror.

Two possibilities: he's molesting kids, and thus guilty, or
he just likes the (non molesting) company of kids. But not smart enough
to avoid getting "shaken down" by unscrupulous people. He should
have just played with the kids in the amusement park, in the living room,
and such, in the presence of their parents and other responsible adults
and not let the kids into the bedroom.

Anyway, I thought he looked better being black....

Does he have a ham license?

But there are advantages. As the owner (even though heavily mortgaged), you
can put up antennas or remodel or whatever without asking the landlord. And
since the interest is tax deductable, you can have a nicer place for the
same money than if it was just a rental.

The key to being successful is having some way of estimating who would be in
trouble approximately 5 years or more down the road not the person who is
currently in trouble or on the ragged edge of currently being in trouble.
Then the property has had time to appreciate enough to be able to turn a
profit.

He is obviously GUILTY because he has never taken an amateur radio test or earned that epitome of radio respect: Morsemanship.

I will suggest that you contact the FCC and put forth a petition to have Jackson permanently banned from having anything to do with U.S. amateur radio.

Alun, with all due respect, such experience ist VERBOTEN in this
chat room.

The requirement to exist in this chat room requires a struct obediance
to morsemanship, tradition forever rooted in old ways back before all
the morseodist regulars ever existed.

>However, ham radio is not a job or a vocation, just a hobby.

In this chat room, the REGULARS maintain a LIFESTYLE of devotion,
obediance to love honor and obey amateur radio in all its past glory.

LIFESTYLES take precedence over logic, common sense, and
anything else not associated with amateur radio (except Michael
Jackson, foreign policy, overall economic decisions by government
and partisan politics).

Ham radio to the regulars is far more than a vocation. Vocations
in radio are to be pejorated, denigrated, spat upon, reviled, made fun
of and other niceties of the TURF where chat room homies consider
their 'hood.

There are NO First Amendment "rights" for chat room homies.
Their only constitution is that of the ARRL. E pluribus Sumner..

>I welcome the
>unmotivated as much as I would welcome anyone else. Why shouldn't they
>have fun too? If someone wants HF and doesn't want to learn code, why
>should they bother to study for a VHF and above licence, when they could
>be scuba diving or building model railroads or what have you? (Not hobbies
>of mine, personally, but whatever turns you on). I know this is sacrilege
>to true beleivers, but so what?

So, Alun, such heretical statements against the True Beliefs of the
morseodist chat room homies are, and will be, reviled, castigated,
denigrated, and shown the door with an angry last phrase of "don't
let it hit your ass on the way out!"

THIS venue is the chat room homies' TURF, Alun. Territorial imperative.

None can venture into this place unless they are of Groupthink,
secure in their Beliefs of the Group.

>The notion that only hams should decide the future of ham radio is just
>that, a notion.

NOT here. This is morseodist TURF, their neighborhood. NONE may
challenge morseodist groupthink. NONE.

>I can absolutely guarantee that it is not a point of view
>shared by the FCC, and it makes little sense to me either.

Heresy.

All know that ham radio is governed by the BoD at Newington.

So it shall always be.

Amen.

It's a pretty silly idea. If we can let someone on the air with a Tech
licence today, then why not 11 years later? Time limitations have always
been artificial. I may think it's a waste if someone stays a Tech for
decades. I will almost certainly encourage them to upgrade, but I don't
think their licence should be cancelled.

>

They can actually do that on CB, FRS, etc. I have no problem with that. Of course, there are tight limitations on what they can do, designed to ensure that they are harmless with their lack of knowledge, and unfortunately often ignored on 27 MHz.

> Why is a Technician Plus class licensee qualified to do anything
> allowed by the rules on 2 meters, but not on 20 meters?

Because they know a bit less, and their signals will mostly only be heard locally, hence limiting the potential effects. Granted that the additional privileges of the Tech+ are not entirely consistent with that theory.

> What special
> knowledge is imparted by the General and Extra class written tests?

The General doesn't impart much in that way. The Extra does, however require a better knowledge of radio theory.

I'm not sure that the present licence classes are very well tailored, but politically it could be hard to change.

Personally, I'm in favour of a two tier system, where those who pass the easier test stay above 30 MHz, or at least above 28 and maybe with access to 1.8, but I don't actually think it's going to happen quite like that. Too much inertia.

>>

Actually one could consider the opportunity to post comments as functionally equivalent to a poll. Anyone can file a comment, licensed or not, citizen or not. That's as democratic as it gets.

All interested persons have the opportunity to know that these issues are up for comment since they are listed on publicly available government pages.

Having to pass the Extra is both unreasonable and unnecessary to be a ham or
remain a ham.

Well, I don't know if disagreeing with the point is intentionally
"missing it" but okay.

> This issue is not limited to just the ham radio community. The frequencies

How you gonna educate them? Most people wouldn't have a clue what we
would be talking about. Do you propose an education system without
either Pro or Anti-code bias?

Should this poll include more input altogether, such as business
interests that would probably prefer us pesky hams to just go away?

Would the results of a poll consisting of people who knew nothing about
the ARS be representative of anything.

How are you going to approach anything like a knowledgable poll pool?

That's why we bought when we first got together (discounting the
four months it took for us to merge our separate rented apartments
and find what we wanted). When we bought our present place, it
helped that we came in with 50% equity....

No, but that could explain my inability to copy any of the comms.
Foreign languages all sound like random noise to me.

I find this all 2-B rather curious.

There are 28,913 Hams in the Hudson Division. (ARRL census)

Of these 28,913 only a paltry 3,403 bothered
to vote in this election.

Am I missing something here or is this really
worth giving two shi+s about..?

Why Dwight, you doubt that all hams wouldn't "vote" based on common
sense, logic and what is rational as a requirement in the 21st century??
:-) :-)

Cheers,
Bill K2UNK

Actually, that would be ALL countries since not one country asserted a
position
of retaining the mandatory code knowledge for all HF hams.

9 countries as of Nov 14th.

> ...why Morse code is necessary (notice I

The changes to government regulations, in the USAand in many other
countries, take time. Did Jim expect an overnight change in the 100+
countries? Frankly, I'm pretty amazed at the ones that have been able to
do so on such a short time interval.

> >>Is this the actions of a modern, progressive, country with feet planted

Len, with all the respect that you feel you're due, this still isn't a
chat room.

> The requirement to exist in this chat room requires a struct obediance
> to morsemanship, tradition forever rooted in old ways back before all
> the morseodist regulars ever existed.

That flies in the face of evidence that there are a wide number of views
expressed here. Once again, this isn't a chat room.

> >However, ham radio is not a job or a vocation, just a hobby.

Hobby, avocation, interest, passion--it still boils down to the fact
that you aren't involved in it.

> In this chat room, the REGULARS maintain a LIFESTYLE of devotion,
> obediance to love honor and obey amateur radio in all its past glory.

This isn't a chat room and I submit that you have no way of knowing what
regulars who post here do in amateur radio. You don't have a close
friendship with any of them and you aren't connected to amateur radio.
By the way, aren't YOU a regular here?

> LIFESTYLES take precedence over logic, common sense, and
> anything else not associated with amateur radio (except Michael
> Jackson, foreign policy, overall economic decisions by government
> and partisan politics).

It would be interesting to see you come up with proof of the LIFESTYLES
claim or of your peculiar ideas about logic, common sense, etc. If
logic and common sense prevailed, you'd likely not haunt this newgroup
at all.

> Ham radio to the regulars is far more than a vocation.

Excuse me, aren't you a regular? Do you believe that ham radio is more
than a vocation? Has anyone else here told you that they believe it?

> Vocations
> in radio are to be pejorated, denigrated, spat upon, reviled, made fun
> of and other niceties of the TURF where chat room homies consider
> their 'hood.

Now you're blowing smoke. I can't remember anyone taking shots at my
voacation in communications except YOU. So the guy complaining about
others not respecting his work in radio is the same guy insulting my
work in radio. Isn't that precious?

Good old Len "Do As I say and not as I do" Anderson!

You post something which claims to quote Roosevelt. It doesn't quote
Roosevelt. I point it out. That makes me an idiot. Is that pretty much
your view? I'm starting to get the hang of the way you think.

Yep, one can tell the "conservatives". Always oppose change. Frankly, I am glad that a few folks wanted some change. Folks like Washington, Jefferson, Adams, Hancock ... to name a few. I assume you wish we were part of the United Kingdom, right? Certainly not *left* (gasp!).

Maybe, if what you suggest is true, they should adapt a slogan. Maybe "I am not a crook" would do (thanx and a tip o' the hat to Richard Nixon).

BTW, this is just a tad off topic, no?

Oh well ... feed the trolls.

Hello, Dwight.

Although way off topic (as are many threads here), I couldn't resist this one.

They say where there is smoke, there is fire. The smoke is so thick around Michael Jackson that they will probably argue that the smoke is too thick so you can't see and therefore prove fire. I'll grant the one arguement that will come up - there will be folks out to make money. But it would appear that this may well not be the case this time. What really galls me is that some folks that have a *lot* of money (I'm talking hundreds of millions of dollars) or political connections appear to be able to buy their way out of nasty situations (Whitewater comes to mind here as well as OJ).

Personally, I think the guy is right off his rocker, but the name of the game should be to protect society (especially kids). Since his close call in the early 90s hasn't seemed to have any effect on him, he is going to have to be put away somewhere where he can't cause more damage(assuming he is convicted). I still worry about what money can buy. If he isn't able to buy out the victim, he can sure afford to buy a ton of attourneys. How does one district attourney with a staff of attourneys that are already very busy deal with someone who can keep a stable full of attourneys coming in from every direction?

I also believe that he married Lisa Marie Presley as a smoke screen. How many divorces so far? I believe, and please correct me if I am wrong, that he was never married until that mess 10 years ago or so. Suddenly, he gets married. And divorced. And ... so on and so on.

Frankly, I don't care what someone does in bed - as long as they leave kids and non-consenting adults out of it; especially kids.

I totally agree with your accessment as to classic symptoms of a pedophile. Neverland should be renamed Never - Ever land. Why just the kids and not the whole family? I believe he was paying his security guards $18.00 per hour over 10 years ago. For the wealthy, this may well be normal - but it also tends to keep those guards' mouths shut.

Sorry for the long ramblings. I suspect, as do you, that this case is going to be another media circus court case. In all honesty, where are they going to find jurors? Oh - I forgot, the Michael Jackson fans. I'd be hard put to be impartial with all of the other known facts (none of which is that he actually molested a kid, but, as I mentioned, there is a ton of smoke and I guarantee there is a fire).

If he isn't convicted, how old do these characters get before their libido finally slows down?

Sorry for being so long winded, Dwight, but this case has me quite upset
(and I think most folks should be upset).

Well, personally, I think it's rather interesting that it is the Michael Jackson story that draws such a debate--when the Catholic priests, bishops, and whomever else in the Catholic Church, have been in the news for at least the last two years...and with increasing evidence, admitted guilt, admitted "sweeping it under the rug," and adults who were kids when they were raped by the priests!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! In the Michael Jackson case(s), there have been no convictions--only speculation and rumors thusfar.

I am not pointing up innocence or guilt--only puzzled by the weirdness of frenzy for the Michael Jackson story; when we have a whole host of tragedies--*proven* not just supposed--from the Catholic Church... I just don't get you folks...

The US legal system has made a mockery of itself, without any help from Larry & Dwight. OJ walked, MJ will walk, Malvo will cop insanity, Scott Peterson will walk, and Zacarias Moussaoui is making a fool of our inept Attorney General Ashcroft.

I've thought about that too. But, how would we hold them responsible - stupidity isn't a crime in this country? Letting a child sleep with an adult is certainly stupid, but we'd have to prove more than that to actually hold the parents responsible. And I can't think of anything specific in the laws we can apply to the parents in this case. Child endangerment is the only thing that comes close, but I don't even think that would fly. To convict, you'd have to show the parents should have known there was a clear and present danger. Since JUST sleeping with an adult is not illegal, that may be a tough case to prove. Anyway, since you said "something" in the first paragraph (not anything specific), perhaps you're having the same problem I'm having.

Dwight Stewart (W5NET)

Dwight:

Any adult, other than a parent, sleeping with a child is just plain sick -- period, End Of Story. Even in the case of parents, it is definitely not a good idea and should be discouraged to the greatest extent possible, although there are occasional, and rare, times when it may be OK to comfort the child in unusual circumstances causing emotional stress.

Any parent permitting their child to attend "Neverland" ranch, with it's accused child molester and world-famous weirdo in residence, is simply exercising nothing less than a criminal level of negligence. Criminal charges should be sought against the parents of the 12-year old boy in question, and he should be immediately removed from that home and placed in protective custody in a registered foster care facility.

Well, folks, here we are now faced with a dual tragedy -- the fact that
Dwight's brother was brutally murdered in a heinous crime of violence,
and the fact that Kim thinks it's "hilarious."

Dwight, you have my heartfelt sympathy and most sincere condolences.

Kim, I can only hope that, as usual, you simply weren't thinking before
you let your fingers spout off their usual gibberish. If you truly meant
what you said, you are beneath contempt.

Larry,

When you become a parent I suspect you'll change your mind. Obviously there is an age where it is not longer appropriate, but I can assure you without reservation that having a couple of fresh bathed toddlers in 'jammies' warm from the dryer snuggle into bed between you and your spouse is one of the most beautiful rewards of parenthood that you could imagine. Until they were school age, we always let our kids to feel free to leave their beds and clamber in with us if the mood struck them. Didn't need to be some dire need of comfort from emotional stress.

Amateur Radio Newsline™ Report 1371 - November 21, 2003

Amateur Radio Newsline report number 1371 with a release date of Friday, November 21, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australia says goodbye to the Morse code and the FCC says hello to a new way to regulate interference. Find out the details on Amateur Radio Newsline report number 1371 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: AUSTRALIA GOES CODE FREE

Australia is joining the no-code revolution. Q-News Graham Kemp, VK4BB is down-under with the details:

--

The Australian Communications Authority (ACA) is reviewing regulatory and licensing arrangements for the amateur service. A discussion paper was released in August 2003, and public meetings were held in 10 cities around Australia. As a result of this extensive public consultation process, the ACA has decided to discontinue the Morse code proficiency requirement for the amateur service.

Background: Article 25 of the Radio Regulations of the International Telecommunication Union sets out the international arrangements for the amateur service.

The World Radiocommunication Conference (WRC) held from 9 June to 4 July 2003 in Geneva fundamentally changed Article 25. The changes to Article 25 have provided the ACA with an opportunity to review and simplify the current regulatory and licensing arrangements for the amateur service. In August 2003 the ACA released a discussion paper that looked at the changes made to Article 25, as well as exploring future options for the amateur service in Australia.
Morse code proficiency requirement to be removed As a result of an extensive public consultation process, the ACA has decided to discontinue the Morse code proficiency requirement for the amateur service. This decision was made considering public comments at the meetings and initial analysis of submissions to the discussion paper.

The ACA will make interim changes to legislative instruments which will immediately allow access to privileges previously available only to those satisfying Morse code proficiency requirements. The ACA is in the

process of amending the amateur radio licence conditions specified in the Radiocommunications Licence Conditions (Amateur Licence) Determination No. 1 of 1997 to reflect this decision. The amendments will give holders of Intermediate and Limited Amateur licences access to the same frequency bands as Unrestricted Amateur licensees; and holders of the Novice Limited Amateur licence access to the same frequency bands as Novice licensees.

The interim arrangements are expected to come into force on 1 January 2004.

I'm Graham Kemp, VK4BB, of Q-News Australia for the Amateur Radio Newsline.

--

More on this in future Amateur Radio Newsline reports. (Q-News: Note: Print version is expanded from audio report)

**

RADIO LAW: FCC LOOKING AT NEW INTERFERENCE STANDARD

Turning to regulatory news here at home, word that the FCC is looking at another way of determining what it calls acceptable interference levels. Termed "interference temperature," the Commission says that this is a new model for addressing interference that takes into account the actual cumulative R-F energy from transmissions of spectrum-based devices. It would also set a maximum cap on the aggregate of these transmissions.

To test the potential usefulness and applicability of this approach the agency has issued a Notice of Proposed Rulemaking. FCC docket item 03-289 seeks comment on various technical rules that would establish procedures and use the interference temperature model on a limited basis in the 6525 to 6700 MHz and portions of the 12.75 to 13.25 GHz bands.

According to the FCC, the "interference temperature" approach may facilitate more intensive use of the radio spectrum, creating the opportunities for new services and improving the predictability of any interference to existing services. The current approach for managing interference focuses on specifying and limiting the transmit powers of individual spectrum based devices. What impact the adoption of an "interference temperature" standard might have on Amateur Radio operations has yet to be determined. (CGC Communicator, ARNewsline(tm), other published reports)

**

REGULATORY NEWS: FCC APPROVES WIRELESS INTERNET IN HAM SPACE BAND

The FCC has turned down an ARRL request to keep so-called wireless Internet connections out of the 5.650 to 5.670 Gigahertz to avoid interference with the Amateur Satellite Service. This, as the regulatory agency makes another 255 MHz of spectrum available for Wi Fi use. Bill

Pasternak, WA6ITF, reports:

--

In a Report and Order in ET Docket 03-122 released on November 18th, the FCC says it was taking action to alleviate crowding in existing wireless Internet allocations. Also, that it wanted to align wireless Internet connectivity here in the United States with the rest of the world.

Amateur Radio has a secondary allocation from 5.650 to 5.925 Gigahertz. That includes a 20 Megahertz wide satellite downlink segment from 5.830 to 5.850 Gigahertz.

An ARRL Bulletin says that back in September the League expressed concerns about the potential for interference from these wireless devices to Amateur Radio space operations. But in releasing its decision, the FCC says that its dynamic frequency selection and transmitter power control requirements should be adequate to protect amateur operations. This, even though the FCC admits that they are not specifically designed to do so.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

In rendering its decision the FCC said that it was not persuaded that it should either add to or modify its proposed rules as requested by ARRL. The Federal government itself is the primary user of the entire band. (ARRL Bulletin, FCC)

**

RADIO LAW: FCC COMMISSIONER'S OFFICE CLARIFIES HER "BROADBAND NIRVANA" REMARKS

The office of FCC Commissioner Kathleen Abernathy has expressed regrets that her remarks in a September speech may have failed to make her concerns about potential interference from Broadband over Power Line sufficiently clear. Responding to complaints from the ARRL and individual amateurs, Abernathy's Senior Legal Adviser Matthew A. Brill said that her office is sorry that the Commissioner's remarks may have been interpreted as suggesting an absence of concern over harmful interference.

The ARRL Letter says Brill has assured the League that ensuring that B-P-L and all new technologies avoids causing harmful interference to licensed R-F users is important to Abernathy. Brill termed it as a bedrock position for the Commissioner.

Last September 22nd, in a speech to the United Powerline Council's annual conference Abernathy expressed personal enthusiasm for B-P-L calling it a Broadband nirvana. That position was quickly challenged by the ARRL and others in the ham radio community. (ARRL)

**
BREAKING NEWS: EARTH HIT BY SEVERE GEOMAGNETIC STORM

A severe G-4 class geomagnetic storm is in progress as we go to air. This, due to the arrival of coronal hole mass ejections related to the returning sunspot group 484, now numbered 501 astronomers.

Thomas Hood, N-W-7-U-S, is the Propagation Editor for C-Q Magazine. In a November 20th posting to the V-H-F Reflector, Hood says that some reporting stations show a K index of 9. The current planetary K index is 8 and the Aurora index is 10. This means that there could be visual Aurora is possible at low-latitudes.

What does this mean to ham radio operations? During the storm HF conditions are poor. So will those on the Medium Wave broadcast bands. But in the world of 50 Mhz and above anything could happen and usually does. Keep your ears open, your radio on and enjoy it while you can.

Now long will this geomagnetic storm last and are more sunspots on the way? Ongoing information is in cyberspace at http://prop.hfradio.org and on the W6YX VHF Reflector.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF. (VHF REflector)

**

ENFORCEMENT: HAM ACCUSED IN WISCONSIN INTERFERENCE CASE

A peason described by authorities as a Wisconsin ham has been arrested and charged with some high tech interference to public service communications. Amateur Radio Newsline's Bruce Tennent, K6PZW, has the rest of the story:

--

The Wisconsin State Journal reports that a ham radio operator is being accused of interfering with emergency radio channels in the city of Madison over the past nine months. According to the Journal, authorities charge that twenty-five year old Rajib K. Mitra, a University of Wisconsin Madison student, may have broadcast audio from pornographic movies over the Madison Police Department airwaves.

The news article describes Mitra is a ham radio operator with a degree in computer science. He was arrested Thursday November 13th after police showed up at his apartment with a search warrant looking for radio and

computer equipment and pornographic audio.

According to a Madison police spokesperson, the interference usually left the radio system dead for stretches from a few seconds to about 20 minutes but never on a regular schedule. Al Schwoegler, the Madison Communication Operations Supervisor said that this intermittant operation added to the difficulty of tracking the source.

The interference came at times when police were dispatched on calls. Authorities believe that the person jamming may have monitored police radio traffic.

Helping to track down Mitra was Ralph Pellegrini. The newspaper article identified Pellegrini is a ham operator and technician for Sprint PCS who assisted police. Authorities approached Pellegrini for assistance when they thought the interference might be coming from a Sprint cellular tower. Pellegrini in turn gave a lot of credit for Mitra's capture to those he termed as the Madison radio guys. He notes that they were able to hunt down Mitra in a city R-F environment that's pretty bad.
